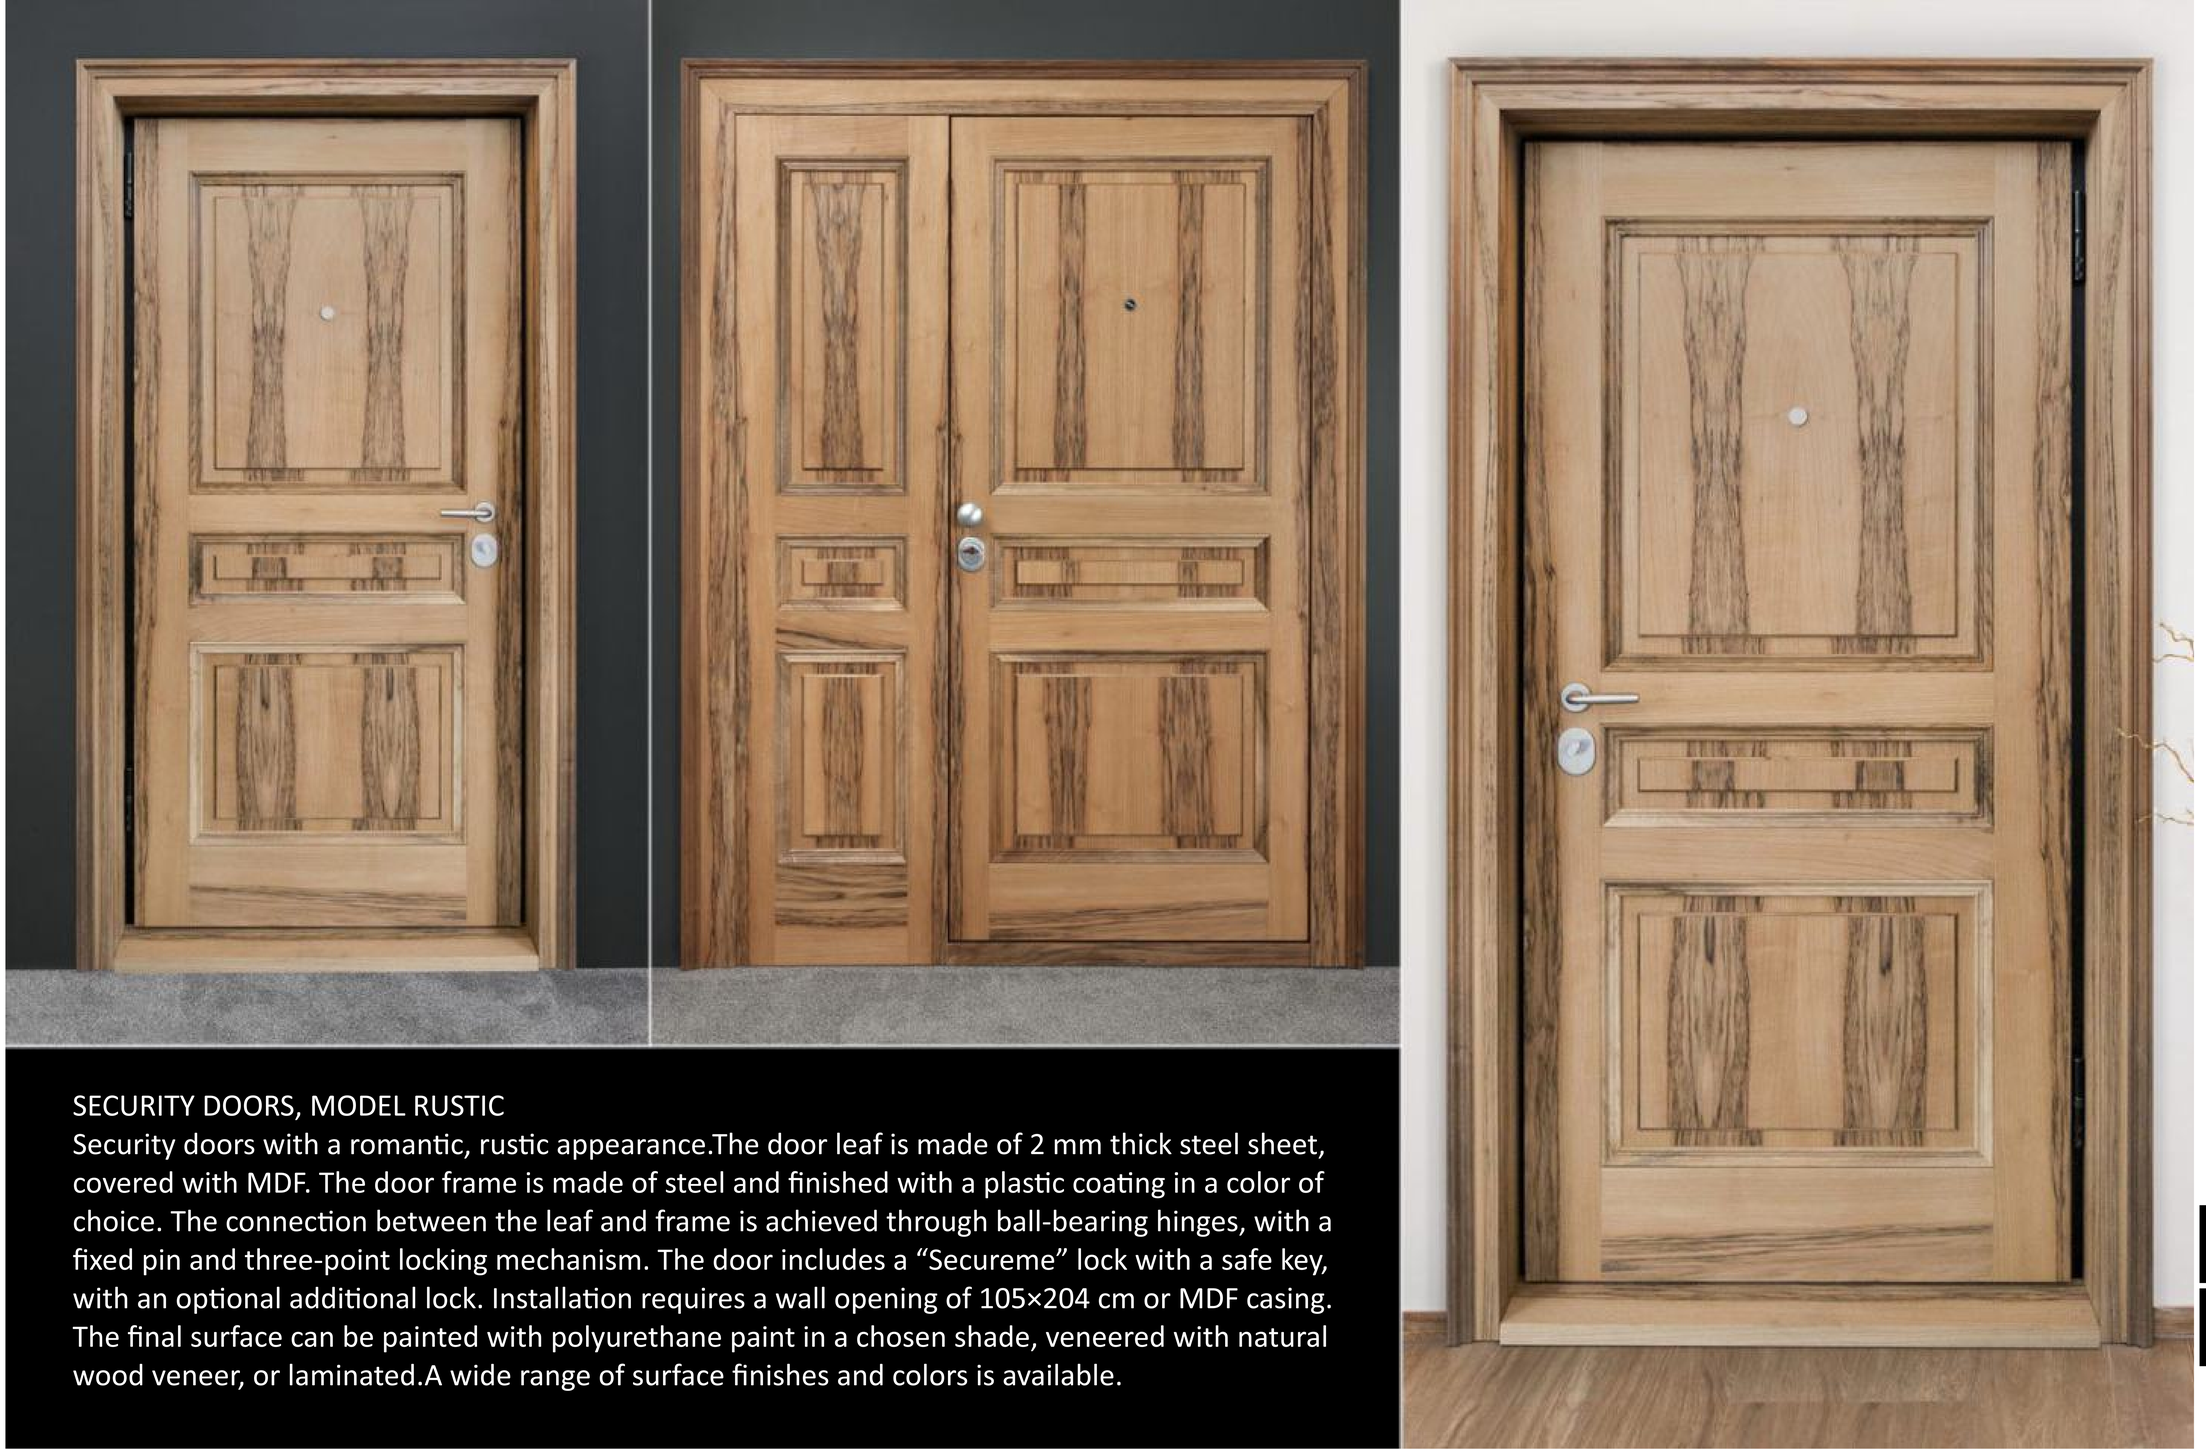
HOTEL AND SOUND-INSULATED DOORS

As part of our interior carpentry program, we are especially proud of our hotel doors installed in over 2,000 accommodation units. We offer models certified for sound insulation levels of 32.6 dB and 46 dB, optionally with fire resistance certification up to 30 minutes. Various opening and closing mechanisms are available, including mechanical locks, electromagnetic receivers compatible with “Smart” systems, or “Offline Smart” lock options.The final door finish is customizable: painted with polyurethane paint, veneered with natural wood veneer, or covered with HPL laminate resistant to mechanical damage.A wide range of surface finishes and colors is available.

STANDARD SECURITY DOORS

The door leaf is made of 2 mm thick steel sheet, covered with MDF. The door frame is made of steel and finished with a powder coating in a color of choice. The connection between the leaf and frame is achieved through ball-bearing hinges, two fixed pins, and three-point locking. The lock is a “Secureme” type with a safe key, with an optional additional lock. Optionally, the wall opening (frame) can be covered with MDF. The final MDF finish can be painted with polyurethane paint in a chosen shade, veneered with natural wood veneer, or laminated.A wide range of surface finishes and colors is available.



SECURITY DOORS, MODEL RUSTIC

Security doors with a romantic, rustic appearance.The door leaf is made of 2 mm thick steel sheet, covered with MDF. The door frame is made of steel and finished with a plastic coating in a color of choice. The connection between the leaf and frame is achieved through ball-bearing hinges, with a fixed pin and three-point locking mechanism. The door includes a “Secureme” lock with a safe key, with an optional additional lock. Installation requires a wall opening of 105×204 cm or MDF casing. The final surface can be painted with polyurethane paint in a chosen shade, veneered with natural wood veneer, or laminated.A wide range of surface finishes and colors is available.

PARQUET AND INTERIOR DOORS

Bringing nature into your home.

Since 1997

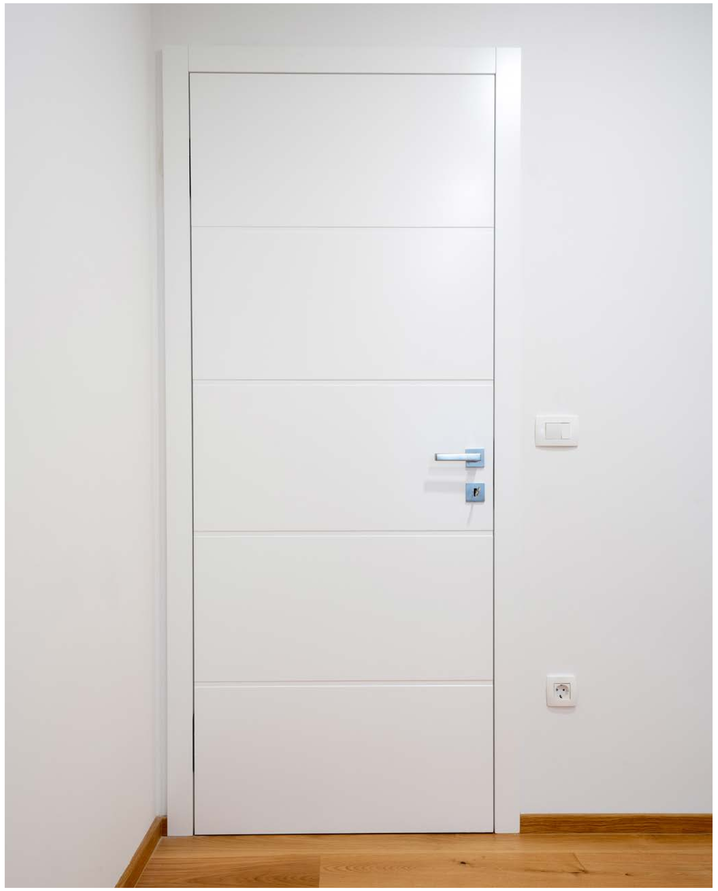
INVISIBLE LINE
idih narave v vašem domu

Where aesthetics meet top-tier quality

DETA&CO has been engaged in the production of parquet and interior doors since 1997. With production at a high technological level, we provide aesthetically perfect and high-quality products that are friendly to both the user and the environment.
Our mission is to ensure the satisfaction of our customers. We strive for the highest level of aesthetic and quality standards, which we ensure with teamwork, a winning mindset, and high goals.

Prime Line

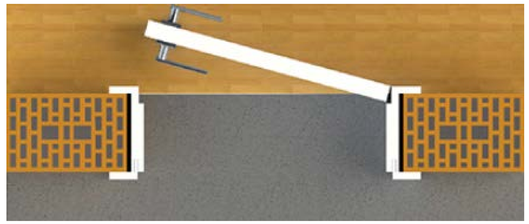
Prime Line



Prime Line is characterized by a classic wooden frame, concealed hinges, and a magnetic lock. You can choose from different patterns, colors, and veneers. In addition to the classic door opening system, you also have the option of choosing opening into the jamb. This means that the door leaf and frame are aligned with the corridor.

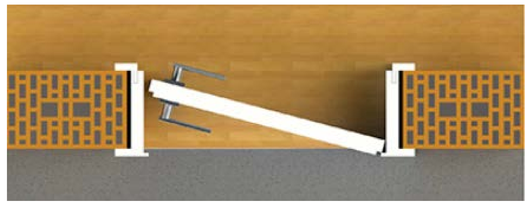
The magnetic lock is extremely quiet, and the precision of the mechanism offers you a pleasant feeling when moving and closing the door. Concealed hinges will impress you with their minimalist aesthetic design, which adds a special touch to your home. They allow us to have the door frame and the door leaf in the same plane, which has a unique optical effect.

Opening systems



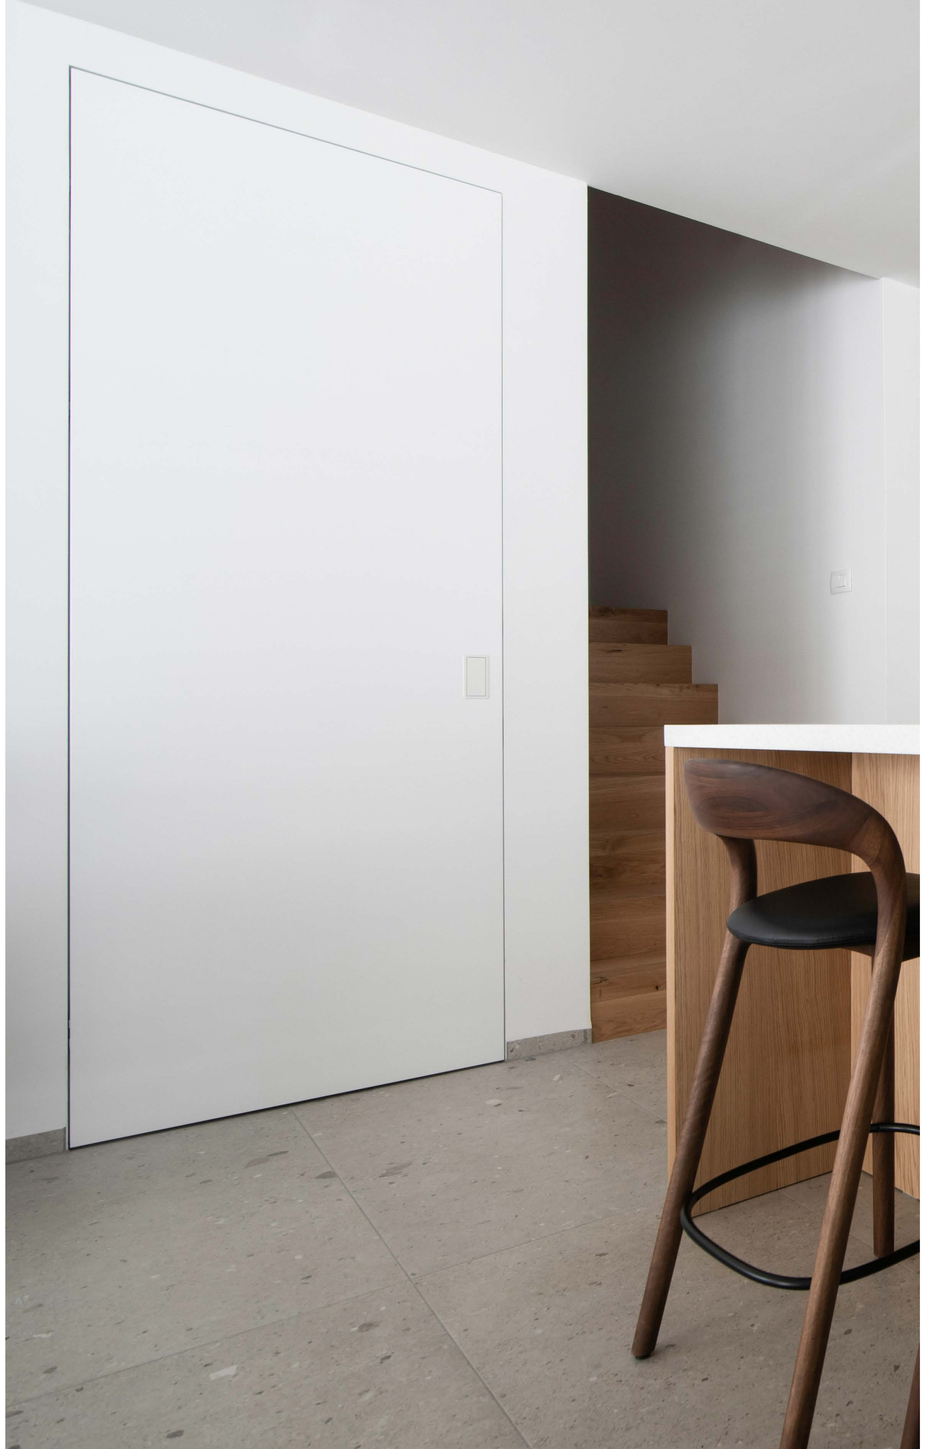
Classic door opening

The classic look of an interior door where the door frame is visible in the hallway. The door leaf is aligned with the frame on the side of the room.



Opening into the jamb

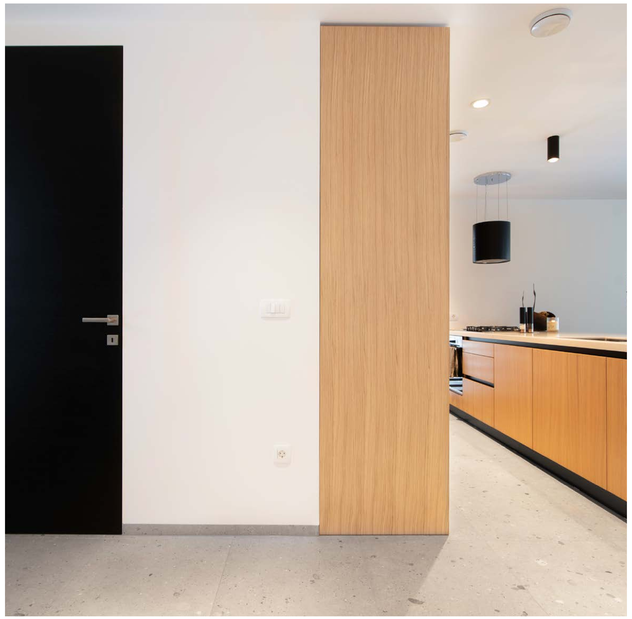
Opening into the jamb offers alignment of the door leaf and frame to the corridor side, while the door still opens into the room. The design gives your home technical perfection combined with an elegant appearance.



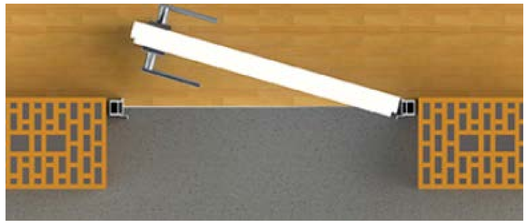
Invisible Line

Invisible Line

Internal doors with hidden aluminum frame, concealed hinges, and a magnetic lock. The invisible line is characterized by the elegant appearance of the door leaf aligning with the wall, while the aluminum frame is hidden in the wall. You can choose from different patterns, colors, and veneers.

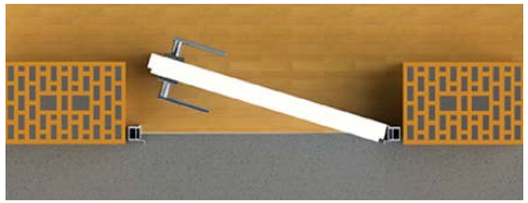


Opening systems



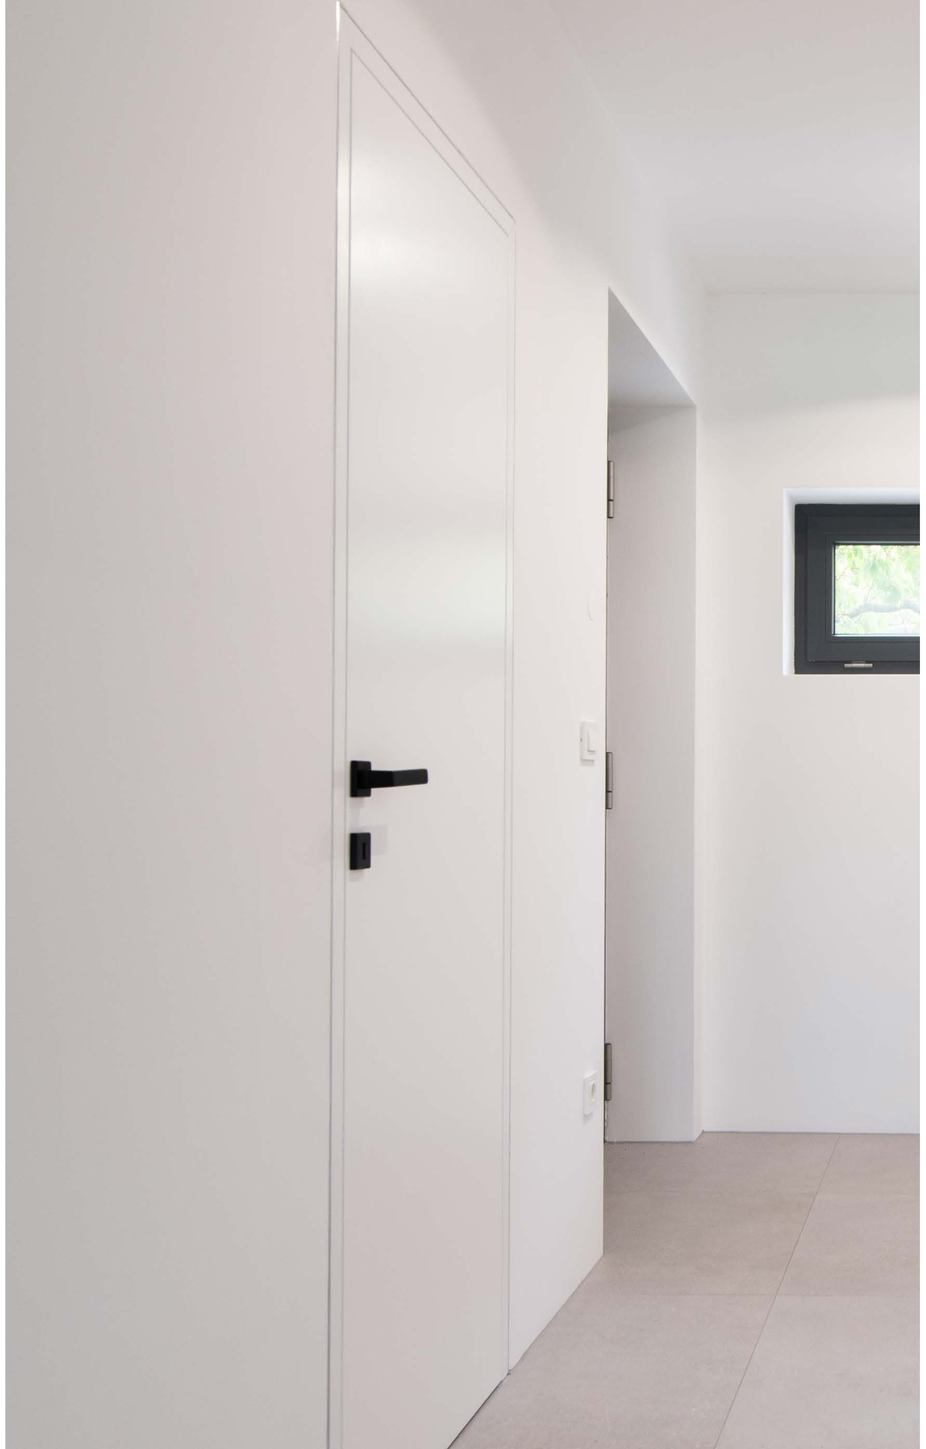
Classic door opening

Classic opening of the interior door with a hidden aluminum frame. The frame and the door leaf are aligned with the side of the room.



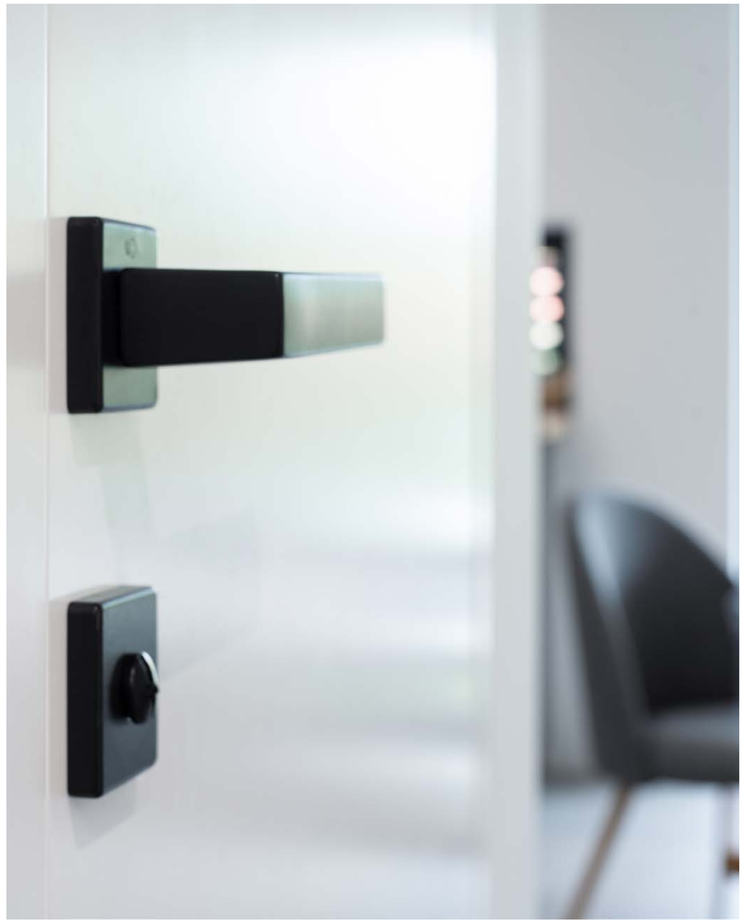
Opening into the jamb

Opening into the jamb. The aluminium frame and the door leaf are aligned on the side of the corridor.



Minimal Line

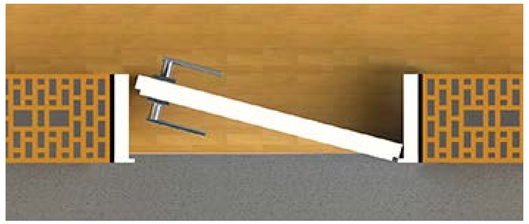
Minimal Line



Minimal Line doors are made of a minimali wooden frame, which is alined with the wall on both sides. The line includes a magnetic lock and concealed hinges. We offer a wide range of patterns, colors, and veneers.

We uniquely adapt the color of the fittings to your wishes for a perfect interior door look.

Opening systems

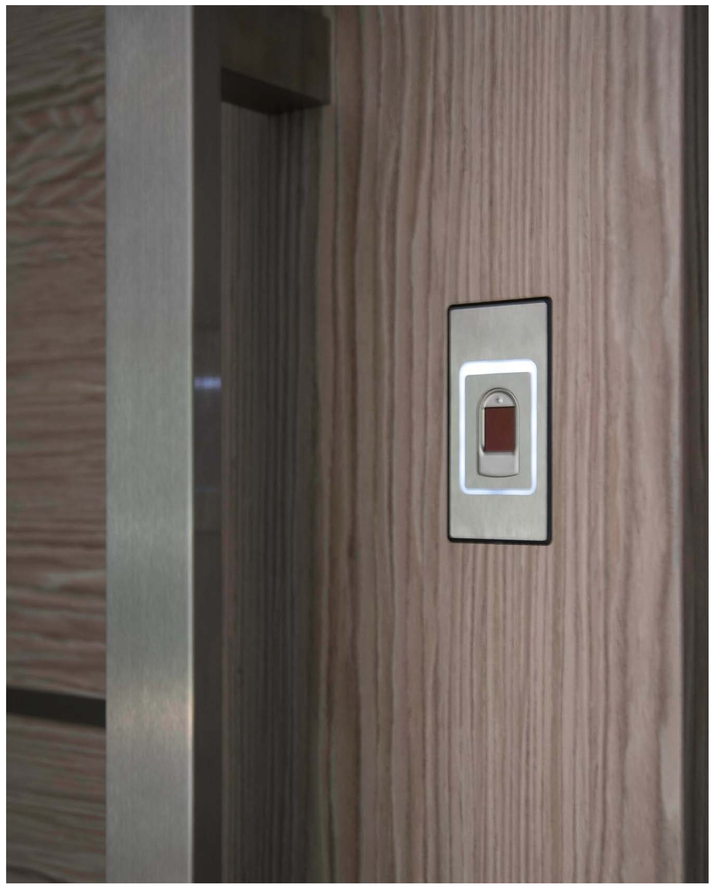


Opening into the jamb

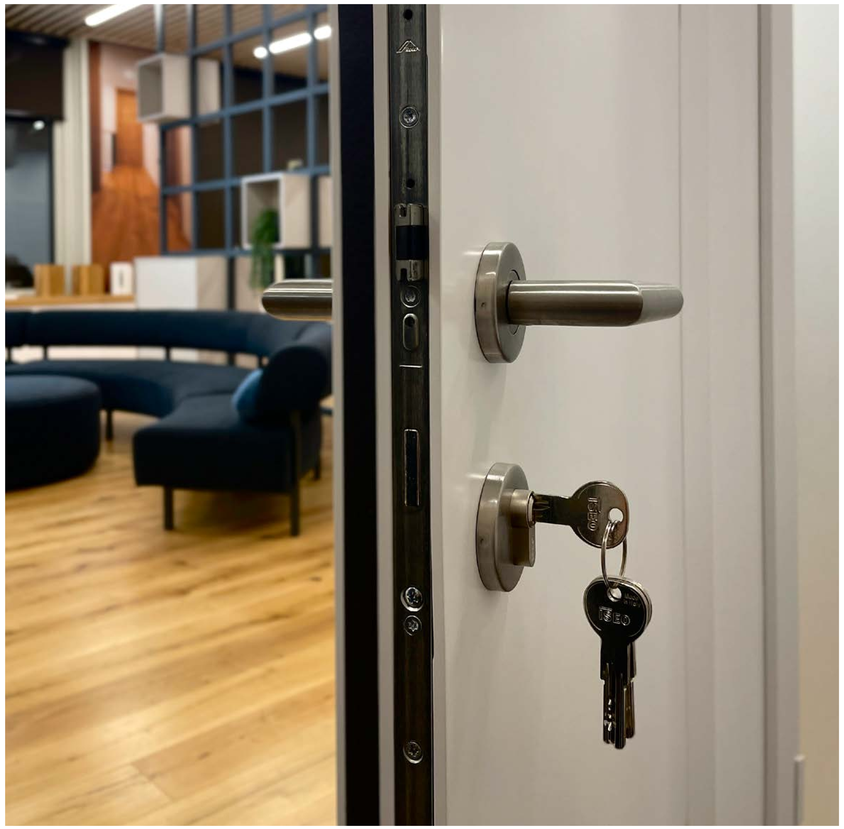
The Minimal Line opening system offers the alignment of the minimal jamb and door leaf with the corridor, which allows for a continuous connection for your home and a complete display of its character.

Entry Line

Entry Line

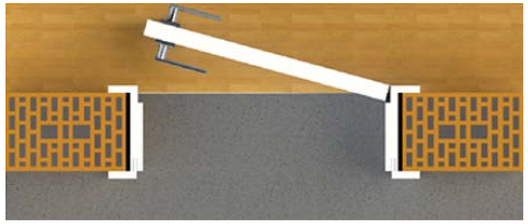


Entrance door suitable for a multi-apartment building. With a carefully planned design, they are structurally upgraded and reinforced. They are equipped with a three-point lock system, concealed hinges, a cylinder lock, a floor seal, and additional equipment that you can choose from our extensive product range.



The reinforced core, three-point locking system, and cylindrical lock represent a combination of security elements that significantly increase the level of security.

Opening systems



Classic door opening

Entry Line interior doors open classically. The line is equipped with a three-point lock, which is located on the inside of the door and is thus additionally protected against possible external mechanical damage.

Slide Line

Slide Line

sliding door in a cassette with a frame
