HEAT AEROSOL

Fire Extinguishing Device

The Heat Aerosol Fire Extinguishing Device is a compact, automatic fire suppression solution designed for enclosed spaces like electrical cabinets, EV chargers, and server cases.

It requires no external power, activating automatically via thermal start at 175˚C to extinguish fires quickly and without residue.

Featuring a 5-year maintenance-free service life and simple installation using 3M adhesive or embedded mounting, it is a reliable CE and EN 15276 certified safety solution.
