

SPRING is in the air!

2025

Dear partners,

Spring is in the air!

It is with great joy that I present to you our Spring catalogue, **a vibrant collection that reflects the heart and soul of Caramel Publishing.**

As the new CEO, I am honored to join an organization that has long been a beacon of creativity and education for children worldwide. We believe in our ability to blend imagination with purpose, producing books that ignite curiosity, foster learning, and inspire young minds.

We are grateful to you, our valued partners, for believing in us, catalogue after catalogue. Your trust and collaboration are the foundation of everything we do. Your support allows us to keep bringing magical stories and valuable knowledge to life.

As we look to the future, innovation and sustainability will guide our journey.

Thank you for being part of the Caramel Publishing family. Let's continue to empower children with knowledge and create stories that resonate across cultures and generations.

I invite you to explore this Spring catalogue and discover the new series we have brought to life.

Warm regards,

Marika Luyckx

25 Activities for Little Ones

2 titles
195 x 265 mm
40 pages
Hard cover

Explanation of the different symbols		Table of contents	
ACTIVE	Full games, outdoor games, hand work, outdoor & indoor, it's going to get you moving!	CREATIVE	Painting, drawing, crafting, let your imagination run wild!
RELAXING	Playing calmly, observing, gardening, from time to time, we all need to unwind!	EDUCATIONAL	Reading about a new world, playing with a ball, there's only one rule: it's got to be fun!
EDUCATIONAL	Memory games, classifying objects, using objects, it's all about keeping your brain active!	TASTY	Fun activities, recipes, and healthy ideas to follow!
SENSORY	Fingerpainting, feeling in different materials, identifying things by smell, these senses will certainly be stimulated!		
Look at games without looking that many games and activities have overlapping characteristics. It gives you the best of both worlds, as each activity can be both creative and sensory.			

- The book parents and grandparents have been looking for
- Perfect for keeping a toddler busy for an afternoon
- Inspiring creativity and learning through play
- A variety of activities with clear illustrations

19 What's it like to LIVE IN SPACE?

Usually, actually, there is space. North America, Europe, Russia and Japan astronauts can visit the International Space Station (ISS), around 400 km above Earth's surface. It's a small city in the sky. There it's a warm and dry place. They go there to carry out space experiments and launch satellites. It should be very cool there as well as being fun!

22 Can you have a PARTY in space?

Yes, but you can't see many people! You can celebrate your birthday with a birthday cake and balloons. You can even have a party in space. They have a special room for parties. Maybe you'll also get messages from your friends back on Earth to make the day even more special.

20 How BIG is the ISS?

About the size of a large city building, the International Space Station (ISS) is the largest man-made object in space. It was designed to sleep seven people at a time, but during some holidays, there may not be enough beds to go around. The space station has its own gym and a small kitchen. It's a very cool place to live. It's also very busy!

21 What can you EAT AND DRINK up there?

Food which includes rice, pasta and meat, is generally dehydrated. In other words, all the water has been removed to make it safe and light and easy to keep for a long time without a fridge. To eat it, just add water. Drinks are drunk through special straws to stop the liquid floating all over the place. And they drink a lot of water!

23 How and where do you SLEEP?

You have to sleep in a special sleeping bag that is fixed to the wall or ceiling. Everything floats in the space station, so this bag prevents astronauts from drifting off while they sleep. It's very dark, and even if you sleep with a night light, your body doesn't need it. It's like sleeping in a floating bubble.

24 What about going to the TOILET?

The lack of gravity makes going to the toilet a pretty tricky thing. Astronauts use a special toilet. It's a vacuum toilet. It sucks up the waste and keeps it in a container. They have to use a special toilet. It's a vacuum toilet. It sucks up the waste and keeps it in a container. They have to use a special toilet. It's a vacuum toilet. It sucks up the waste and keeps it in a container.

10 Do astronauts travel in ROCKETS?

A rocket is a machine that is used to launch spacecraft into space. It is a very powerful machine. It can carry a lot of things into space. It can also carry people into space. It is a very important machine. It is used to launch satellites and other spacecraft into space. It is a very important machine. It is used to launch satellites and other spacecraft into space.

13 Are spacecraft flown by REMOTE CONTROL?

Every space mission needs a pilot - but not always. Some spacecraft are flown by remote control. They are called unmanned spacecraft. They are used to launch satellites and other spacecraft into space. They are used to launch satellites and other spacecraft into space. They are used to launch satellites and other spacecraft into space.

11 Can they take PERSONAL BELONGINGS with them?

Yes, but only very small, very light things. They can take a few things with them. They can take a few things with them. They can take a few things with them. They can take a few things with them. They can take a few things with them. They can take a few things with them. They can take a few things with them.

14 How FAST do spacecraft travel?

The Apollo 11 mission to the Moon in 1969 is a record speed of about 43,000 km/h. That may sound like a very fast speed, but it's not. It's not a very fast speed. It's not a very fast speed. It's not a very fast speed. It's not a very fast speed. It's not a very fast speed. It's not a very fast speed. It's not a very fast speed.

12 What must they NOT FORGET?

Food! They need to take a lot of food. They need to take a lot of food. They need to take a lot of food. They need to take a lot of food. They need to take a lot of food. They need to take a lot of food. They need to take a lot of food. They need to take a lot of food. They need to take a lot of food. They need to take a lot of food.

15 How LONG does it take to get there?

That depends where they're going. It can take a few days. It can take a few days. It can take a few days. It can take a few days. It can take a few days. It can take a few days. It can take a few days. It can take a few days. It can take a few days. It can take a few days.

1 Is space a LONG WAY away?

Actually, it's not as far as you might think. It's only about 400 km above Earth's surface. It's only about 400 km above Earth's surface. It's only about 400 km above Earth's surface. It's only about 400 km above Earth's surface. It's only about 400 km above Earth's surface. It's only about 400 km above Earth's surface. It's only about 400 km above Earth's surface.

4 What TRAINING does an astronaut receive?

There is a lot of training that astronauts receive. They have to be very fit. They have to be very fit. They have to be very fit. They have to be very fit. They have to be very fit. They have to be very fit. They have to be very fit. They have to be very fit. They have to be very fit. They have to be very fit.

2 WHY do we need astronauts?

Well, if you want to know more about our solar system, you need astronauts. You need astronauts. You need astronauts. You need astronauts. You need astronauts. You need astronauts. You need astronauts. You need astronauts. You need astronauts. You need astronauts.

5 Why do they train in the DESERT?

To practice survival techniques. In space, astronauts are going to find themselves in an extremely harsh environment. They are going to find themselves in an extremely harsh environment. They are going to find themselves in an extremely harsh environment. They are going to find themselves in an extremely harsh environment. They are going to find themselves in an extremely harsh environment.

3 WHO can be an astronaut?

If you are a very good at science and engineering, you could be an astronaut. You could be an astronaut. You could be an astronaut. You could be an astronaut. You could be an astronaut. You could be an astronaut. You could be an astronaut. You could be an astronaut. You could be an astronaut. You could be an astronaut.

6 And in a SWIMMING POOL?

One of the big challenges of life in space is coping with weightlessness. In other words, not being able to keep your feet on the ground. This is a big challenge. This is a big challenge. This is a big challenge. This is a big challenge. This is a big challenge. This is a big challenge. This is a big challenge. This is a big challenge. This is a big challenge.
