Environmentally Responsible

sustainable sheet products

SUSTAINABLE SOLUTIONS

When it comes to labeling solutions that are eco-friendly, more products made with alternative fibers are becoming available. Whether it is water-based adhesives, FSC® certified options, products manufactured with 100% recycled or tree free fiber; we offer environmentally responsible roll label selections to fit your needs.

WHAT IS FSC®

The Forest Stewardship Council® (FSC) is a global non-profit that sets standards for responsible forest management. Their mission is to ensure forests are managed in an environmentally, socially, and economically sustainable way.

Wausau Coated Products has FSC's chain of custody (COC) certification, which means they properly track and manage FSC certified materials throughout the supply chain.

WHAT DOES PCW MEAN?

PCW (post-consumer waste) refers to material that has been used by consumers and then collected at a recycling or waste center. It is reintroduced into the manufacturing process, helping to prevent tons of material from ending up in landfills.

WHAT IS THE DIFFERENCE BETWEEN PCW AND RECYCLED MATERIAL?

PCW (post-consumer waste) is paper that has been used by consumers and then recycled. Recycled paper can include both pre-consumer waste (scraps and trimmings from manufacturing) and post-consumer waste.

BIODEGRADABLE VS. COMPOSTABLE

A product is biodegradable if it breaks down into natural elements, usually in a landfill. A product is compostable if it breaks down and adds valuable nutrients to the soil, typically in a compost pile with the right levels of oxygen, water, and heat. While biodegradable materials decompose in the environment, compostable materials also improve and fertilize the soil.
