SIRE DIRECTORY // AUGUST 2026

YOUR SUCCESS *Our Passion.*

WHERE MODERN STRATEGY MEETS JERSEY TRADITION

Research shows that genomic predictions for Jersey sires are not as accurate as Holstein sires. While genomic Predicted Transmitting Abilities (PTAs) for Jersey traits are more reliable than using Parent Averages (PA), the accuracy of PTAs is not high enough to justify heavy use of an individual young sire. One example provided by the American Jersey Cattle Association compares performance data from 239 Jersey bulls that were born from 2010 to 2017 that now have more than 500 milking daughters in their genetic evaluations. For each sire, the PTAs were more accurate than the PAs, but the young sires in this data set were over evaluated by 35 JPI™ points.

DRIVE GENETIC PROGRESS WITH ECONOMICALLY IMPORTANT TRAITS:

AUGUST 2026 UPDATES

FERTILITY TRAIT ADDITIONS AND ADJUSTMENTS

To keep pace, fertility traits have been refined and expanded. FSC, CCR, HCR, EFC and DPR now work together to give a clearer, more accurate picture of genetic fertility, separated from management decisions. New to the industry is First Service to Conception (FSC) which measures days from first breeding to conception. It removes VWP noise and focuses only on what happens after breeding begins. A higher PTA means that daughters conceive sooner and the trait is strongly correlated with DPR and CCR.

NEW CALF HEALTH TRAITS FROM CDCB Calf Diarrhea (DIA) and Calf Respiratory Disease (RSP) are early-life health traits that measure genetic disease resistance. Approximately 17.8% of Jersey calves are affected by diarrhea and 23.7% of Jersey calves are affected by respiratory disease in the U.S.

SELECT SIRES DESIGNATIONS

FEEDPRO™

FeedPRO optimizes selection for increased production and moderate body size while maintaining body condition score and daughter fertility. This revolutionary index designates sires with the genetics to improve income over feed costs and maintains health and reproductive traits.

Throughout this directory, you will find sires sporting the special designation icons listed here along with their descriptions. Use these tools to choose sires that best reflect your management style to meet your goals.

FERTILITYPRO™

The FertilityPRO designation identifies sires with semen that will likely improve pregnancy rates. This designation is assigned by examining industry service Sire Conception Rate (SCR) values, along with intensive in-house semen quality evaluations.

gender SELECTED™ Ultraplus™

This icon identifies sires with sex-sorted semen available. More heifers is not out of reach with our research-backed *gender* SELECTED sires. All *gender* SELECTED semen is processed using Ultraplus technology.

SHOWCASE™

Sires earn the SHOWCASE designation through outstanding breed-leading Type or show-winning pedigrees. Turn to this designation to produce your next show winner or improve the overall type in your herd.

gender SELECTED 4M™ Ultraplus™

Look for the *gender* SELECTED 4M icon to identify sires with sex-sorted semen available in 4 million sperm doses. All *gender* SELECTED semen is processed using Ultraplus technology.

GRAZINGPRO™

GrazingPRO sires improve the profitability of grass-based production systems by transmitting greater longevity, improved mobility, moderate stature, greater component yields and superior production - all while not compromising Daughter Pregnancy Rate (DPR) and Somatic Cell Score (SCS).

ELITESEXED FERTILITY™

The Elite Sexed Fertility icon designates sires that can help you achieve the highest sex-sorted semen conception rates, enhancing your return on investment! This innovative designation distinguishes our highest performing sires for sex-sorted semen in both 2M and 4M products.

ROBOTPRO™

RobotPRO sires transmit desired traits for robotic milking systems. These sires were selected based on component and milk yield, milk quality, udder health, functional udder traits like udder floor, and milking temperament. Use these sires to create the next generation of profitable cows for your automated milking system.

MASTITISRESISTANTPRO™

Sires which excel in multiple indicators of mastitis resistance are more likely to deliver genetic improvement. Mastitis ResistantPRO uses a combination of CDCB Mastitis Resistance, CDCB Somatic Cell Score (SCS) and Zoetis Mastitis Resistance.

*FeedPRO, FertilityPRO, GrazingPRO, Mastitis ResistantPRO and RobotPRO are registered trademarks of Select Sires Inc. *Showcase, Elite Sexed Fertility, *gender* SELECTED and *gender* SELECTED 4M are trademarks of Select Sires Inc., and Ultraplus is a trademark of STGen LLC.

FOR JERSEY SIRES WITHOUT SEXED SEMEN IDENTIFICATION, PLEASE CONTACT YOUR SELECT SIRES REPRESENTATIVE FOR POTENTIAL OPPORTUNITIES TO SPECIAL ORDER *gender* SELECTED PRODUCT.

NEW TOOLS FOR STRONGER, HEALTHIER CALVES

Calf Diarrhea (DIA) and Calf Respiratory Disease (RSP) are early-life health traits that measure genetic disease resistance.

Calfhood disease inhibits growth, influences future milk and component production and depresses genetic potential.

Scan the QR code below to learn more about DIA and RSP.

HAPLOTYPES IMPACTING FERTILITY

With our growing knowledge about the bovine genome, experts have predicted for some time that we'd likely discover numerous cattle genetic defects. Human genetic researchers estimate that we each carry four or five genetic defects. It's reasonable to expect that these exist at a similar level in cattle.

USDA researchers along with international collaborators have identified haplotypes that appear to cause embryo loss or stillbirths when these haplotypes exist in the homozygous state.

These genetic conditions have not been directly observed and we do not know the exact genetic or biological cause of why the embryos or fetuses are not viable. Because of this, they've been given simple names of Jersey Haplotype 1 (JH1), Brown Swiss Haplotype 1 (BH1), Brown Swiss Haplotype 2 (BH2), Ayrshire Haplotype 1 (AH1) and Ayrshire Haplotype 2 (AH2). These haplotypes appear to have a recessive mode of inheritance where animals with zero or one copy of the haplotype are completely normal. Those that inherit two copies of the haplotype are lost as embryos or are stillborn.

The impacts of these haplotypes vary and are dependent on their frequency in the population and at what stage of gestation the pregnancies are lost. JH1 has a frequency of 18.4%. BH2 exists at a frequency of 13.3%. Two haplotypes have been discovered in the Ayrshire breed (AH1) and it exists at the highest frequency of 22.2%, AH2 exists at a frequency of 21.0%.

It's important to realize that the negative impact of these haplotypes is already accounted for in the routinely published sire conception rate (SCR) evaluations and daughter pregnancy rate (DPR) genomic evaluations. So, if you are using these traits in selecting your A.I. sires, you're already avoiding or compensating for these genetic conditions.

The haplotypes each represent a distinct and unique genetic condition. They are not related to each other. The haplotypes have no impact when a bull that is heterozygous for AH1 is mated to a cow that is heterozygous for AH2. The risk is only experienced when animals are heterozygous for the same haplotype.

Select Mating Service® (SMS®) is an excellent tool for managing these genetic conditions. By using the SMS program, herds with at least one generation of pedigree information on their cows can use heterozygous bulls with less than 1% chance of lost pregnancies from known conditions.

JERSEY NEUROPATHY WITH SPLAYED FORELIMBS (JNS)

The American Jersey Cattle Association (AJCA) recently shared news of a new undesirable trait known as Jersey Neuropathy with Splayed Forelimbs or JNS. Select Sires is working closely with the AJCA and researchers from USDA-AGIL to learn about this new undesirable trait. As your cooperative, we will continue to support you and provide you with the most up-to-date information.

Genetic research and genomic testing are more prevalent than ever before. As technology advances and we test more cattle, we will continue to make these types of genetic discoveries. While it is likely that many sires will carry this undesirable trait, we have the available genetic information and breeding strategies to avoid its impact.

By using genetic test results, pedigree information and guidance from your Select Mating Service® (SMS®) genetic consultant, you can avoid carrier-to-carrier matings and successfully manage undesirable traits. This breeding strategy avoids economic loss while continuing to utilize the industry's best genetics.

The sire below from the Accelerated Genetics lineup is a carrier for JNS.

614JE2353 JX WYNDHAM {5}

Sire is part of the Accelerated Genetics active lineups. List as of 08/11/2026.

The genetic evaluations contained within this report, unless otherwise noted, are provided by the Council on Dairy Cattle Breeding as the steward of the National Cooperator Database. The National Cooperator Database houses producer-owned yield, management, ancestry, type, and genotype data for the use in genetic evaluations and independent research. Data included in the National Cooperator Database is submitted through certified organizations for

data quality and integrity. As such, individual traits - along with Lifetime Net Merit \$, Cheese Merit \$, Fluid Merit \$, and Grazing Merit \$ - are Powered by CDCB, unless otherwise noted such as Holstein type traits. For more information about evaluations Powered by CDCB and the industry collaboration that fuels them, visit <https://uscddb.com/cdcb-marks/>.

EXCLUSIVE SOURCE *for gold*

Guernsey Gold Sires was established in cooperation with Select Sires to provide elite genetic options for Guernsey breeders in the U.S. and around the world. To receive semen domestically, simply place your order at www.usguernsey.com using the GGS tab. Orders will be shipped from Select Sires directly to the customer using three-day FedEx delivery with a \$100 shipping and handling fee. Orders of 30 or more straws of semen will receive free shipping and handling. In international markets, Guernsey Gold Sires semen is available through World Wide Sires, LTD (Europe, Asia, Africa and Oceania), Select Sires Canada, and Central and South America Select Sires representatives.

Select Sires Inc., its member cooperatives, its agents or employees cannot and do not guarantee the conception rate, gender, quality or productivity to be obtained in connection with the use of its products or recommended techniques. It makes no warranties of any kind whatsoever, expressed or implied, which extend beyond the description of its products and hereby disclaims all warranties of merchantability and fitness for a particular purpose. In the unlikely event that any of our products shall be proven to be defective, damages resulting from their use shall exclude consequential damages and be limited to the purchase price of the product.

gender SELECTED and gender SELECTED 4M are trademarks of Select Sires Inc. Ultraplus and Ultraplus 4M are trademarks of STGen LLC. All gender SELECTED semen is processed using Ultraplus technology. Limitations and Conditions of Sale: gender SELECTED semen shall be used only for the single insemination of one female bovine during natural ovulation with the intent to produce a single offspring unless specifically approved on an individual customer basis by Sexing Technologies in writing. As a condition of purchasing gender SELECTED semen, the purchaser agrees that gender SELECTED semen will not be reverse sorted or re-sorted unless specifically permitted, in advance, on a case-by-case basis by Select Sires in writing. Select Sires intends to monitor the use of the gender SELECTED semen and vigorously enforce these restrictions on use. Please see <http://www.selectsires.com/designations/gendersselected.html> for additional details.

ARE RESPIRATORY CHALLENGES HINDERING YOUR YOUNG CATTLE?

Respiratory disease is one of the biggest health challenges among young cattle.

AccelAIRate is designed to preserve and support respiratory health in young cattle while maximizing growth and development.

Contact your Select Sires representative today to learn how you can **BUILD A BETTER CALF®**

Cow Start™ Complete is a trademark and manufactured product of Anchor Life Sciences, Ltd. All claims made above are based on studies conducted by Anchor, summaries of which are available at agrariansolutions.com/product/cow-start-complete-bolus/.

DON'T AGITATE. GENERATE SAVINGS.

Dispersing sediment and fiber while maintaining manure consistency is essential for proper nutrient distribution and availability. SOP™ Lagoon promotes the existing microbial population present in manure to improve nutrient efficiency and prevent crust formation without agitation. Lower operating costs and maximize yields with SOP Lagoon.

Contact your local Select Sires representative to access exclusive savings!

SOP Lagoon is distributed by Select Sires Inc. through the wholly-owned sustainability company, Low Carbon Technologies, LLC. Buyer assumes all responsibility for use, storage and handling of SOP Lagoon. Low Carbon Technologies, LLC makes no claims or warranties, expressed or implied. ®The Low Carbon Technologies logo is a registered trademark of Low Carbon Technologies, LLC, Plain City, OH. ™SOP is a trademark of SOP S.r.l. Società Benefit.

NEW!

FIND MY COW FLASH

OPTIMIZE WORKFLOW.
ENHANCE PRODUCTIVITY.

Find a cow that's in heat, sick or in the wrong pen within seconds with Find my Cow. This helps save time, labor, and costs while improving day-to-day efficiency, no matter the size of your herd. The flashing light on the ear sensor makes it easy to identify the right cow or calf. Activate the light from your CowManager app or desktop and spot the animal in seconds.

HANDLING FROZEN SEMEN STRAWS

Proper semen handling is essential to maintain optimum reproductive performance of your A.I. breeding program. To maintain the high quality of semen you purchased from your Select Sires representative, you must pay strict attention to the many details of semen handling outlined on this poster. If you have questions about the correct handling procedures for Select Sires semen, please contact your Select Sires Reproductive Solutions® Specialist.

STRAW RETRIEVAL AND THAWING

Avoid raising straws above the frost line. **1**

On new canes, bend the identification tab up to a 45° angle. **2**

Use the forceps to remove one straw at a time from the top. If it takes more than 10 seconds to retrieve the straw, lower the canister back into the tank and allow to re-cool for 20 to 30 seconds. **3**

Shake the straw gently to remove excess liquid nitrogen and promptly place in 95° F (35° C) water to thaw for at least 45 seconds. Thaw only as many straws as you can use in 10 to 15 minutes. When multiple straws are thawed, do not allow direct contact during thawing process. **4**

To retrieve straws from the bottom goblet, grasp the cane and raise it until the straws are even with other cane tops. Hold the cane and canister with one hand. With your forceps in the other hand, remove the desired straw and place it in the thaw water. **5**

LOADING THE INSEMINATION GUN

Before loading the insemination gun, pre-warm the barrel by stroking it vigorously with your hand five or six times.

Make sure the plunger is back about six inches to allow for insertion of the straw.

Remove the straw from the thaw water and wipe it completely dry with a paper towel.

Check to see that the straw contains semen from the desired bull and that a small bubble is at the crimped end.

If the bubble is not at the crimped end, gently tap the straw until the bubble moves to its correct position.

Place the cotton plug end of the straw in the gun. It will stop at exactly the right depth.

Wipe the scissors with a paper towel and cut the straw at a right angle ¼" below the lab seal. **6**

Slide the plastic sheath over the straw and gun and firmly attach the sheath and gun together. **7 8**

Inspect the straw end of the gun to ensure a proper seal between sheath and straw. **9**

Wrap loaded guns in a paper towel or in a plastic sheath cover to provide both thermal and hygienic protection and place inside your clothing for transport to the cow. **10**

Product of the USA

AN ECONOMIC-BASED, FUTURE-FOCUSED INDEX

TROUBLE-FREE AND LONGER-LIVING

Reduce death loss and involuntary culling to align with replacement inventory strategies and spend less time and money treating sick cows.

IMPROVE COMPLETION RATES

Healthy heifers are a valuable asset and a significant indicator of future profitability. Heifer wellness traits can help secure the bottom line.

BOOST COMPONENTS

More pounds of fat and protein from fewer cows equates to more lifetime profit per cow.

BREED BACK QUICKLY

By improving pregnancy rate from 19% to 25%, herds can increase profit by \$49 per cow per year.

CONFORMATION THAT COUNTS

Leverage the conformation traits that create easy-to-milk, easy-to-manage, balanced cows.

STRENGTHEN MASTITIS RESISTANCE

Incorporate genetic solutions to safeguard against mastitis while improving milk quality.

HHP\$[®]

Herd Health Profit Dollars[®] Index
