apparel*

Color Last 40/60 °C is a modern textile technology used for fabric production. Clothes made with this textile have exceptional color fastness. The method ensures that the color of the clothes remains intact for up to 50 washes at 40 or 60 °C.

3D Flex is an exclusive technology used in fabrics with an elastane content of 2% or more. It enables the fabric to stretch in all directions, providing freedom of movement and comfort during work. Fabrics with 3D Flex technology are used to produce Bwell medical clothing.

X-Light is a new technology that minimizes the weight of Bwell work shoes. This is achieved by introducing extremely light materials in the sole, toe, and plate. It is designed for user comfort and to reduce fatigue in the extremities during long workdays.

Antimicrobial is a technology designed to keep germs and bacteria away from clothes, through a special antimicrobial treatment of textiles for greater cleanliness and freshness. In this way, in addition to safety, the quality of the fabric is also preserved and its wear is reduced.

Anti wrinkle is an innovative technology that keeps the fabric smooth and wrinkle-free throughout the day. Thanks to the special treatment of the textile, the fabric is wrinkle-resistant, which eliminates the need for frequent ironing, without compromising the professional and impeccable appearance. I

Odor resistant is a special technology that treats fabrics to make them odor-resistant and retain their freshness even after repeated wear. Thanks to this technology, odors and the development of bacteria in the fabrics are prevented. This provides a long-lasting feeling of cleanliness and comfort, while reducing the need for frequent washing.

KAI 01**KAI Medical shoes**

KAI are work clogs from the Bwell brand, category 01 SR FO ESD, suitable for medical environments, the food industry, laboratories, and clean production areas. The upper is made of high-quality microfiber, resistant to wear and easy to clean. The model features a heel strap for a secure and stable fit, while the perforations in the front enhance ventilation and comfort.

The shoes are developed with X-LIGHT technology, which reduces weight through the use of lightweight materials. The EVA and rubber outsole provides a high level of flexibility, wear resistance, and reliable traction.

The integrated RE-BOUNCE technology supports energy return during movement and reduces fatigue during prolonged wear. The model is equipped with an anatomical insole made of high-quality polyurethane foam with ERGO PLUS technology, ensuring cushioning while walking and long-lasting comfort.

Thanks to its ESD properties, the shoes are suitable for environments where controlled dissipation of static electricity is required.
