

Custom Planters

Turning the grey green[©]

At Meristem Design, we create bespoke green solutions for business, public and residential areas. We deliver custom sustainable projects that place nature at the forefront to bring benefits to people, communities and the environment.

From project inception through to aftercare, we provide high-quality services such as:

Design

Fabrication

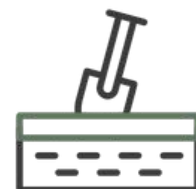

Delivery

Installation

Planting

Maintenance

Custom Planters

Bringing vibrancy and life, planters help brighten up urban areas and complement streetscapes. They create a more welcoming atmosphere in public spaces, making them more inviting to residents and visitors.

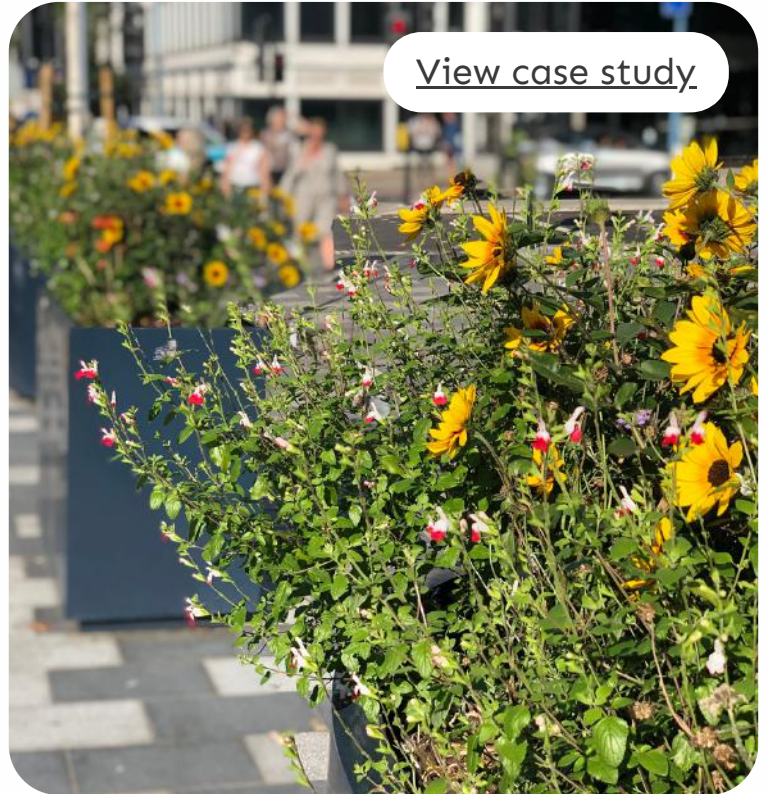

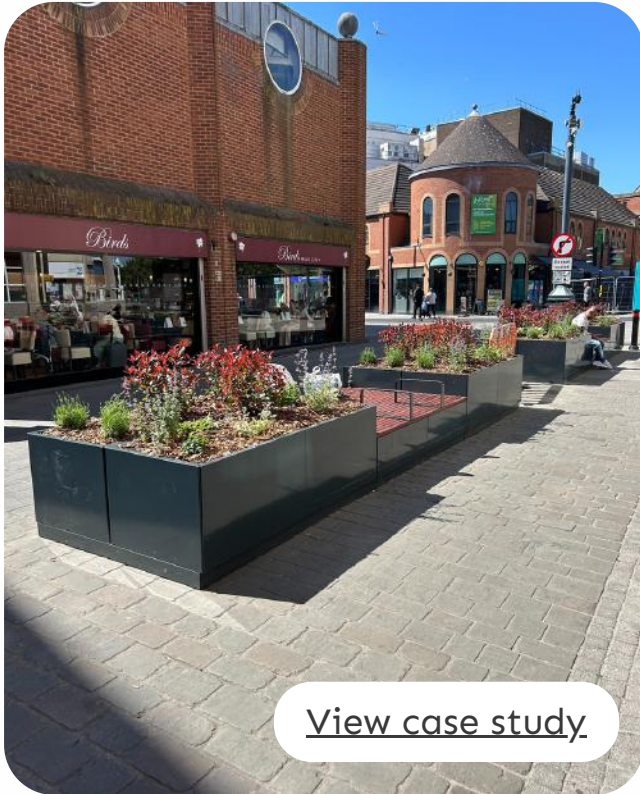

Our planters can be custom made to any shape, size or colour and they can be designed to fit in around existing street infrastructure. Bespoke planters can also include seating.

We design, fabricate and install planters in a wide range of materials including; powder coated steel, metal, galvanised steel, hardwood, weathering steel, timber, softwood and more.

High Street Planters

Custom planters for high streets enhance urban environments by providing greenery, seating, and spatial definition in high-traffic areas. For high streets, custom planters can be designed to your specific site dimensions to fit in high-traffic pedestrianised zones or to act as barriers.

Tree Planters

Available in different species, tree planters fit seamlessly into spaces, providing a place to rest, connect and boost urban canopy cover. They come in a range of sizes and can have watering systems installed, tree stakes and tree anchoring systems. Planters are available with lifting hooks or risers so they can be moved around with HIAB vehicles or forklift trucks.

Green Screen Planters

We supply and install planters with green screens which are available in many different species. Our instant green hedging screen provides a natural privacy screen for any garden, landscape or commercial project. They are a fantastic way of creating outdoor dining spaces, partitioning areas, enhancing privacy, improving air quality, greening up building sites and much more.

Timber planters

Planters are available in a range of shapes made from both softwood and hardwood. Hardwoods available are iroko, sapele, oak, and balau. Left to age naturally, these timbers will silver over time or they can be regularly oiled to maintain their rich colour. Timber planters are typically heavy duty and are well suited for modal filters, low traffic neighborhoods, street furniture and applications where planters are to be durable and long lasting.

Powder Coated Steel

Our powder-coated steel planters combine industrial-grade durability with complete design flexibility. Built to order in any size and shape, each planter is finished in the RAL colour of your choice. The powder-coating process creates a tough, weather-resistant finish that resists chipping, fading, and corrosion, keeping planters looking sharp for years with minimal upkeep.

School Street Planters

Planters used for school streets are robust, often custom-designed features that help create safer, greener spaces outside schools during pick-up and drop-off times. Acting as effective traffic calming measures, they restrict vehicle access, reduce air and noise pollution, and improve road safety while supporting low-traffic neighbourhoods.

Corten Steel

Meristem's planters are available in a weathering steel option, otherwise known as Corten Steel. Corten steel offers a sophisticated, industrial look which contrasts amazingly with vibrant green planting. Weathering steel is a group of steel alloy which was developed to eliminate the need for painting and form a stable rust-like appearance after exposure to the elements.

Lamp column planters

Available in a range of shapes and sizes, these planters are built to go around existing furniture or items in the street-scape. The planters are suitable to be installed around bollards, streetlamps and electrical feed points. Access hatches and panels can be designed into the planters to ensure that when required, relevant engineers can get access to the lamp column or feed point.

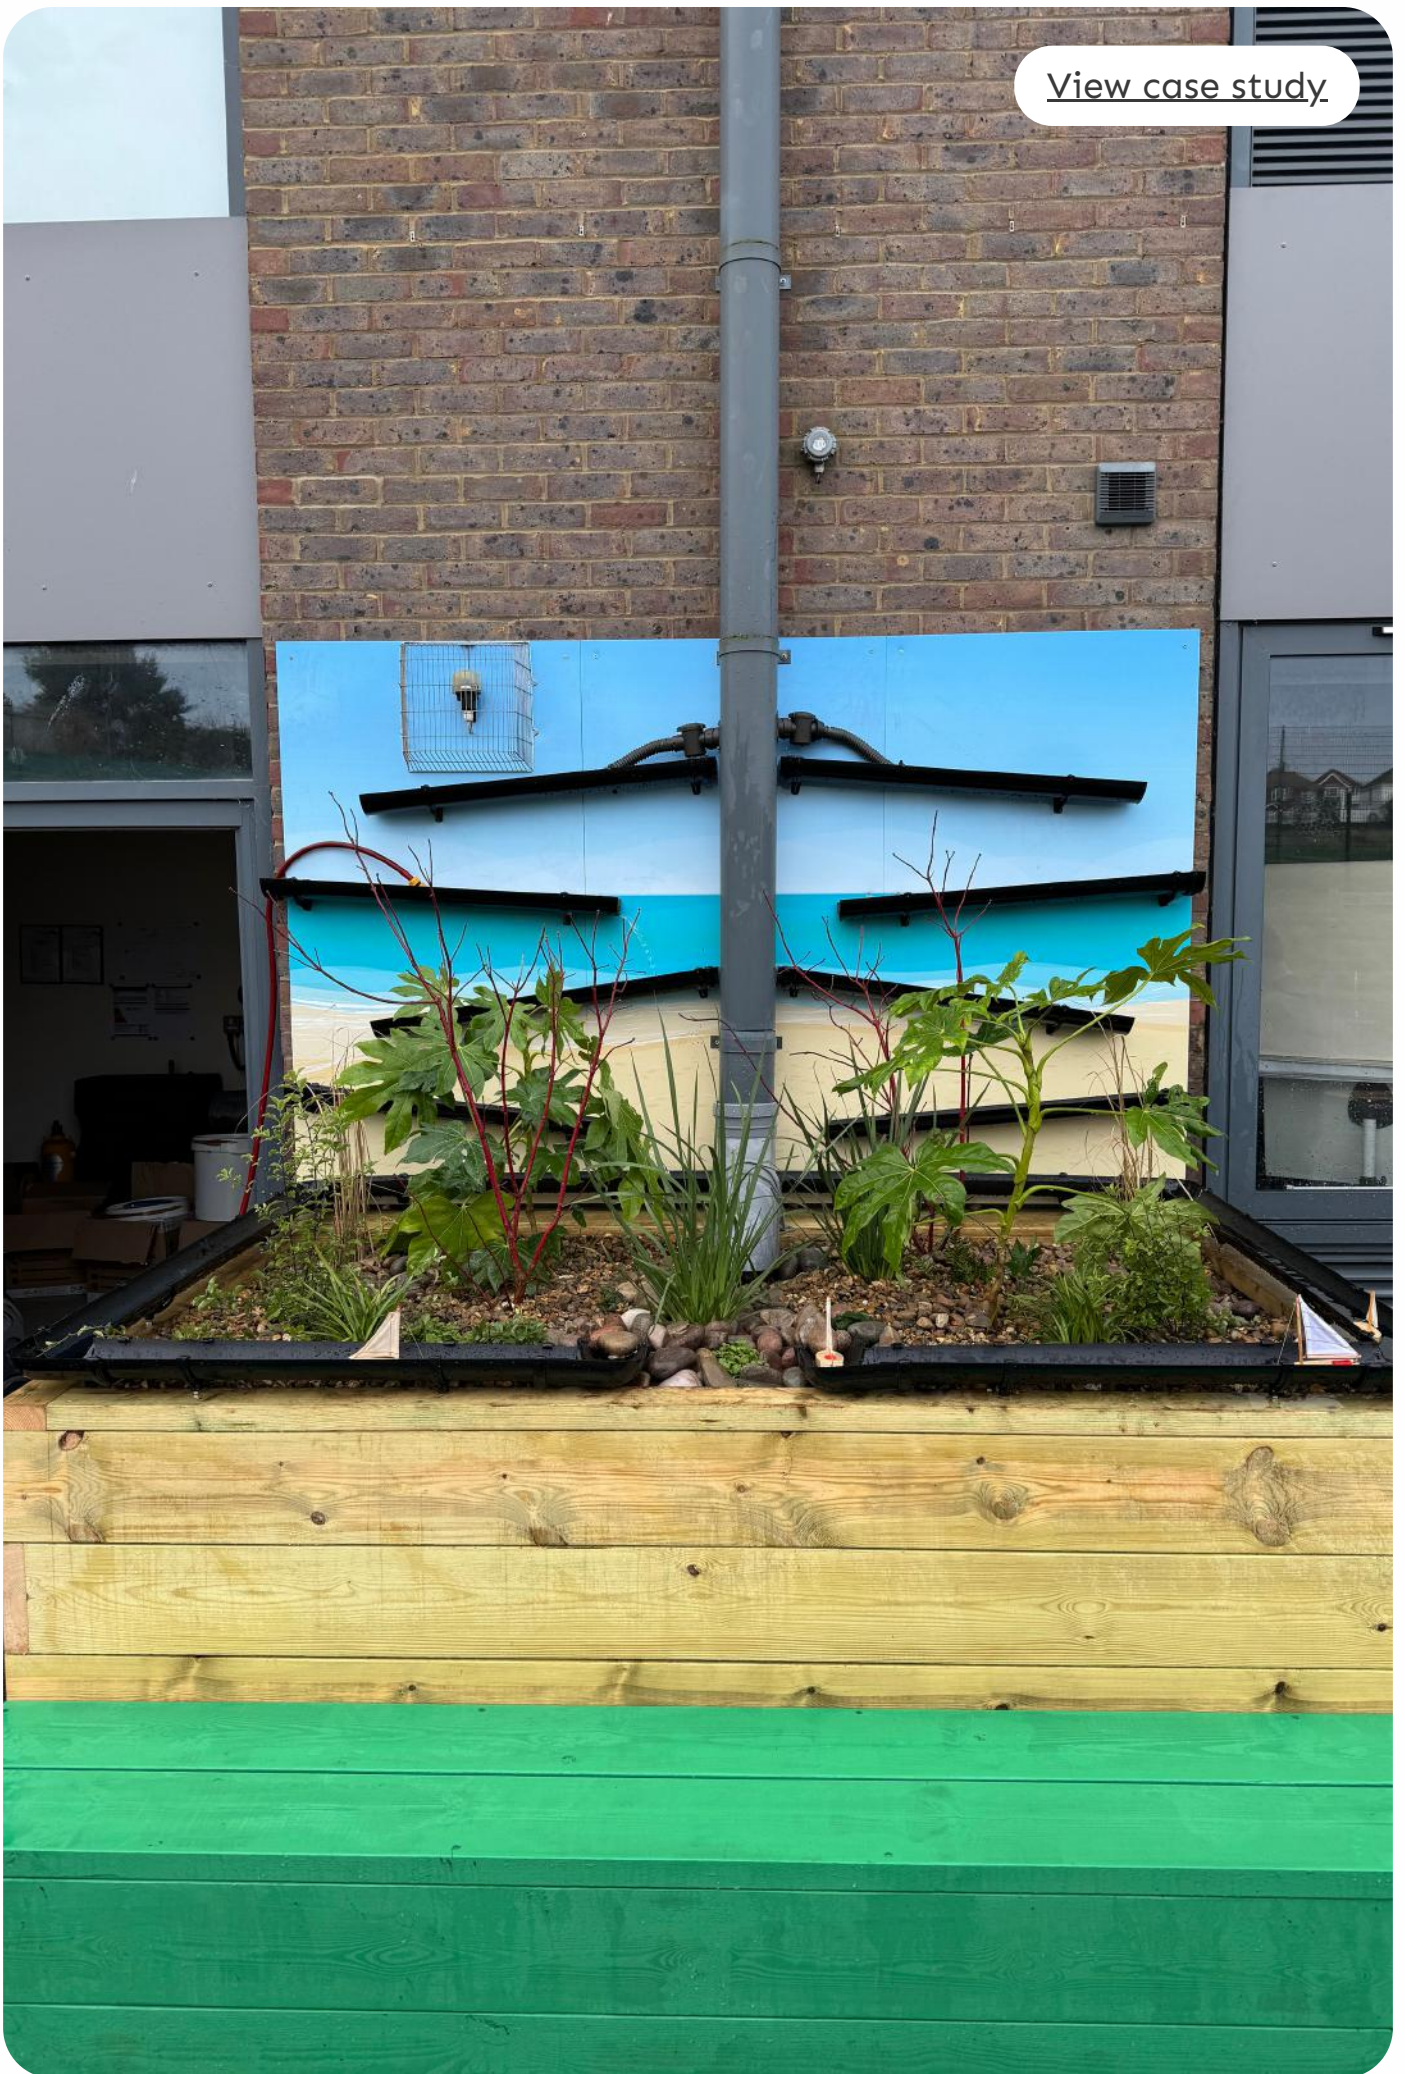

SuDS Planters

Our SuDS planters are designed to manage rainwater sustainably in urban environments. By incorporating natural elements like vegetation, these innovative systems slow the flow of water, reducing runoff and the risk of flooding. They can be any custom size or shape.

Branding and logos

Elevate your outdoor spaces with custom-branded planters that put your logo front and center. Each planter can be personalized with your company's branding, colors, and logo through durable engraving, laser etching, or weather-resistant printing - ensuring your brand identity stays crisp and visible through every season.
