

○ XL Picking Bins

○ Econotainers

For more than two decades, XL have provided high quality storage and handling products into a wide range of industrial, commercial and service organisations.

Our range consists of small parts picking bins, storage boxes, louvred panels, wall kits, Clearview tilt front containers and shelving sets.

The XL small parts bins are manufactured in the West Midlands in accordance with ISO9001 Quality Assurance controls and are produced in four colours (red, blue, green and yellow) using polypropylene polymer. The grey Econotainers are manufactured using the same tooling but in recycled material which provides an economic and environmentally friendly option.

These injection moulded bins are strong, durable, hygienic and being non toxic can be used in food applications.

Orders can normally be fulfilled within a few days from our well stocked warehouse in the centre of the country. The semi open fronted containers are brought together with louvred panels and lightweight shelving to provide complete kits which make fitting out a storage area simple.

The Best has just got Better!

XLare delighted to announce the launch of four new small parts bins to their range.

The new XL1, XL6 and XL7 are now available and complete a suite of containers with capacities from 0.5 litre up to 31 litres.

Produced in the usual 4 colours and the grey recycled polymer they exhibit all the characteristics of the current models with reinforced side supports, smooth contours for ease of handling and straight walls for maximum internal capacity.

The range is further enhanced with a brand new bin called the XL Store. This product takes the issue of increased capacity a stage further with a huge 50 litre facility, yet still with all the benefits of an open pick face and stacking too. However, when the unit is empty it can simply be nested in a ratio of 3:1 meaning much greater efficiency.
