MEDIKA®

Premium Combines *Tower & Desktop*

Professional Multi-Function Cosmetic Device

The Multifunction Beauty Platform is an advanced, non-invasive aesthetic system designed to support a wide range of face and body treatments within one device.

The platform offers modular configurations allowing beauty professionals to deliver multiple high-demand aesthetic treatments while maintaining flexibility and business scalability.

The system combines advanced skincare technologies designed to improve skin appearance, hydration, cleansing and revitalisation while supporting personalised treatment programmes.

Multifunction platforms are widely recognised as essential foundation equipment within modern aesthetic salons, allowing businesses to offer versatile treatment solutions and adapt services to changing client demand.

Premium Combines

Tower & Desktop

MEDIKA®

Smart Expansion. Flexible Configuration.

Compact Professional Power

Same advanced treatment modules
Premium Corian® surface
Professional performance in compact form

Expand your treatment menu step by step
Adjust investment to your clinic strategy

Ideal For

Clinics with limited space
Smart investment planning
Additional treatment room setup
Growing businesses

Medika Premium Tower vs Desktop System

MEDIKA®

Key Feature	Medika Premium Tower	Desktop System
Number of Treatments	9 integrated professional modules	Limited configuration (selected functions only)
Face & Body Options	Full face & body capability	Usually face-focused or single-area treatments
Skin Analyser	Built-in professional skin analysis	Not typically included
Technology Level	Integrated RF, ultrasound, infrared, vacuum & infusion systems	Basic individual functions such as standard RF, ultrasound or diamond microdermabrasion (model dependent)
Design	Elegant standing tower – premium presence	Compact tabletop unit
Space Organisation	One centralised multi-function system	May require additional separate devices
Target Salon Type	Premium clinics & advanced salons	Small or starter salons
Investment Approach	Higher upfront, broader service & ROI potential	Lower upfront cost

Premium Combines

MEDIKA®

Which Model Is Right for Your Clinic?

Same advanced technology. Different strategic approach.

Choose Tower

- Flagship, full-size statement system
- Centrepiece of your treatment room

Choose Desktop

- Compact, space-efficient solution
- Flexible, scalable growth model

Whichever you choose:

Premium build quality. Multi-function capability. Long-term growth.

Premium Combines

MEDIKA®

Treatment Possibilities

The Multifunction Beauty Platform supports a wide range of professional face and body treatments tailored to individual client needs.

Treatment applications may include:

- Deep skin cleansing and detoxification
- Skin hydration and revitalisation treatments
- Skin firming and lifting support treatments
- Skin texture and glow enhancement
- Skin preparation before advanced cosmetic procedures
- Body contour support treatments
- Maintenance and preventative skincare programmes

The modular design allows clinics to select treatment combinations suited to their service menu and business development strategy.

Premium Combines

Integrated Beauty Technologies

MEDIKA®

Technologies Inside the Device

The system integrates multiple advanced cosmetic technologies designed to support comprehensive aesthetic treatment possibilities.

Available configurations include:

12 in 1

Comprehensive multifunctional beauty solution supporting multiple facial and body treatments.

10 in 1

Versatile treatment platform supporting both facial and body treatment programmes.

5 in 1

Focused configuration designed for core high-demand aesthetic treatments.

Extended 5 in 1

Enhanced configuration expanding treatment versatility and treatment combination possibilities.

The platform allows additional treatment modules including:

- **Oxybrasion** – supporting gentle exfoliation and skin refresh treatments
- **Radio Waves** – supporting skin firming and appearance improvement treatments
- **Hydrojet Infusion** – supporting deep hydration and skincare infusion treatments

Modular technology allows clinics to expand treatment capabilities as business demand grows.

Other configurations available: 18w1, 16w1, 14w1, 12w1, 10w1, 5w1

Premium Combines

Treatment Results / Indications

The Multifunction Beauty Platform supports practitioners in improving the appearance of multiple skin concerns using personalised treatment protocols.

Suitable for clients concerned with:

- Dull or dehydrated skin appearance
- Loss of skin firmness or elasticity
- Congested skin or enlarged pores
- Uneven skin texture or tone
- Clients seeking preventative skincare programmes
- Clients looking for regular maintenance facial treatments

Treatments are designed to improve skin clarity, hydration and overall skin appearance while promoting a refreshed and revitalised look.

Visible skin improvement is often noticeable immediately following treatment, with enhanced results achieved through regular maintenance programmes.

Multifunction facial treatments are highly popular among clients seeking relaxing, results-focused and customisable skincare solutions.

Premium Combines

MEDIKA®

Contraindications & Safety

Treatments performed using the Multifunction Beauty Platform are cosmetic treatments designed for professional use and require full client consultation prior to each procedure.

Treatments may not be suitable for clients with:

- Pregnancy
- Active skin infections or inflammation
- Open wounds or damaged skin
- Severe skin sensitivity
- Certain medications affecting skin sensitivity

A full consultation should always be completed prior to treatment.

Final treatment suitability should be assessed by a trained practitioner.

Premium Combines

MEDIKA®

Technical Specification

The Multifunction Beauty Platform is designed for professional aesthetic environments, combining advanced performance with intuitive operation.

Key features may include:

- Modular multi-technology system
- Touchscreen control interface
- Multiple interchangeable treatment heads
- Adjustable treatment intensity settings
- Face and body treatment compatibility
- Ergonomic professional design
- Expandable treatment module system

The platform supports flexible treatment planning suitable for various skin types and aesthetic treatment protocols.

Premium Combines

MEDIKA®

Business Benefits

Market Demand & Positioning

- High-demand multifunction facial and body treatment system
- Strong client demand for customised skincare treatments
- Premium treatment positioning within aesthetic service portfolios
- Helps attract new clients seeking personalised skincare solutions

Treatment Versatility & Service Expansion

- Supports multiple treatment types within one device
- Expands salon service menu without additional equipment investment
- Ideal as foundation treatment platform for aesthetic clinics
- Encourages repeat client treatment programmes
- Suitable for both face and body treatments
- Supports package and membership treatment programmes

Return on Investment (ROI)

- Multifunction platforms are widely recognised as one of the fastest return aesthetic investments due to treatment versatility and high client demand.

ROI advantages may include:

- Ability to perform multiple treatment types using one device
- High treatment booking frequency due to maintenance facial demand
- Opportunity to combine treatments increasing treatment value per visit
- Supports skincare retail opportunities
- Encourages long-term client loyalty and treatment packages

Based on average treatment pricing, multifunction platforms may achieve return on investment after approximately 15–25 treatment packages, depending on pricing structure and clinic business model.

Premium Combines

MEDIKA®

Profitability & Return on Investment ROI

Multifunction platforms are recognised as high-performing aesthetic investments due to treatment versatility and strong client demand.

Key revenue advantages include:

- Ability to perform multiple treatment types using one device
- Increased booking frequency through maintenance treatments
- Opportunity to combine services and increase treatment value per visit
- Supports retail and treatment package sales

Example calculation (UK market):

Average treatment price: £130

- 64 treatments to recover £8,292 investment
- Equivalent to approx. 2–3 months at 5–8 clients per week

Strong long-term profitability supported by repeat treatments and client loyalty programmes.

Premium Combines

MEDIKA®

Why Clinics Choose This Device

- Popular and essential foundation equipment for modern aesthetic salons
- Supports personalised treatment programmes
- Allows clinics to introduce new services without purchasing multiple devices
- Comfortable and relaxing client treatment experience
- Flexible and scalable treatment platform
- Supports long-term client retention and maintenance programmes
- Ideal entry-level investment for growing aesthetic businesses

Multifunction platforms are widely recognised as reliable, adaptable and business-focused aesthetic solutions.

MEDIKA®

Price / Investment Options

The Multifunction Beauty Platform is available with flexible configuration options depending on selected modules and treatment capabilities.

AVAILABLE SYSTEMS INCLUDE

5 in 1 Starting from £2,000	18 in 1
10 in 1 Starting from £2,000	16 in 1
12 in 1 Starting from £2,000	14 in 1
16 in 1 Starting from £2,000	12 in 1
18 in 1 Starting from £2,000	10 in 1

Optional Add-On Modules
Oxybrasion • Radio Waves • Hydrojet
Infusion

Investment Package Includes:

- 12-month manufacturer warranty
- Professional team training
- Delivery
- Ongoing technical and business guidance

Designed to grow with your beauty business, allowing you to expand treatment options as your client demand increases.

Documentation & Compliance

All devices are designed for professional aesthetic use and are supplied with full technical and safety documentation.

Each device includes:

- CE / UKCA certification (where applicable)
- Declaration of Conformity
- Technical specifications
- User manuals in English
- Treatment protocols
- Safety guidelines and contraindications
- Risk assessment support
- Professional training support

Devices are supplied with full documentation required for council and insurance applications.

We support clients with preparation for licensing, insurance requirements and safe implementation of treatments into their business.

MEDIKA®

Training & Professional Support

We provide professional training covering:

- Safe device operation
- Treatment protocols
- Contraindications and client safety
- Practical treatment demonstrations
- Business implementation guidance

Ongoing technical and professional support is available after purchase.

MEDIKA®

Premium Combines

Cosmetic combos are essential equipment for any beauty salon or aesthetic medicine practice. There are many models of cosmetic combos available on the market that combine several devices, starting from those 2in1, even up to 10in1. The Medika Premium Multifunctional Cosmetic Combine can have as many as 10 modules, which you can customize according to your needs.

The device uses high quality components, as well as innovative proprietary solutions that distinguish our products from others available on the market. Unique, minimalist design is our hallmark.

MEDIKA®

Premium Combines

How does the beauty combo work?

A beauty combo is, in the simplest terms, a multifunctional device that contains more than a dozen functions, thus disappearing the possibility of having, for example, 3 separate devices that take up unnecessary space.

Medika Premium cosmetic combos come in two versions:

- **Desktop countertop** version, which usually contains several separate modules.
- **Tower** which is a larger in size, standing device with wheels attached. Medika Tower can even have several functions.

Premium Combines

MEDIKA®

AVAILABLE TREATMENT MODULES

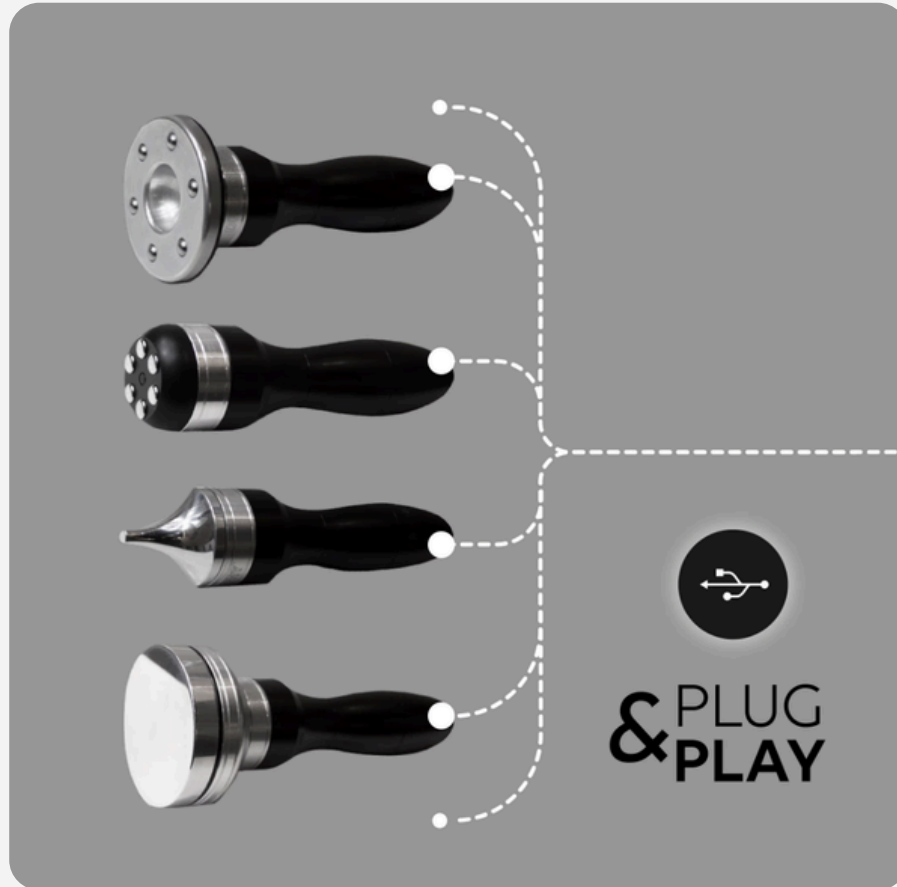

- **Skin Analyzer** – precise assessment of skin hydration
- **Cavitation Peeling** – deep cleansing and exfoliation
- **Needle-Free Cosmetic Infusion (Mesotherapy)** – non-invasive delivery of active ingredients
- **Diamond Microdermabrasion** – controlled mechanical exfoliation
- **Ultrasound (Face & Body)** – skin regeneration and firming
- **Ultrasonic Body Contouring** – fat reduction and body shaping
- **Radio Frequency (RF)** – skin tightening and lifting, enhanced with 650 nm diode laser
- **Oxybrasion / Oxygen Infusion** – gentle exfoliation, oxygenation and revitalisation
- **Dermomassage** – vacuum massage for cellulite reduction and lymphatic drainage
- **Hydrojet (Hydrogen Cleansing)** – deep antioxidant skin purification

What Makes Medika Premium Unique

- *Advanced technologies such as MCT microcurrents, Cellular Nutri System (CNS) and Vacuum Control System*
- *Automatic parameter selection based on skin profile and age*
- *Wide application range for face, body and scalp treatments*
- *Possibility to expand or customize the device configuration*

Premium Combines

The device has a **Plug&Play system**, which solves the problem of unsightly, tangled cables powering the treatment heads. With our premium device, you only need one universal cable to which you plug the working head. This makes your work comfortable and enjoyable.

Medika cosmetic combos use a modular system giving the possibility of any configuration of as many as 10 modules (18 technologies), all in one device, so you can select new functions at any time of use. Possible available functions include skin alizer, diamond microdermabrasion, cavitation peeling, ultrasound, needle-free mesotherapy, radio waves, dermomassage, ultrasonic liposuction, oxybrasion, lipolaser duo.

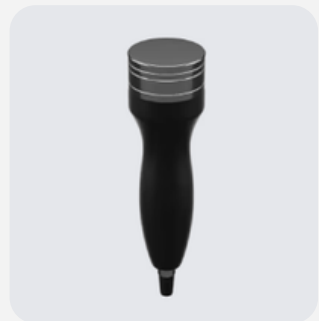

Premium 18in1 Multifunction Combine

ULTRASONIC

Ultrasound works in three ways:

- Mechanically - they lead to an increase in the permeability of cell membranes, accelerate cell metabolism and improve microcirculation. As a result, tissues are supplied with nutrients and oxygen, which is essential for them.
- Thermally (heat) - blood vessels dilate, the supply of blood and oxygen and nutrients to cells increases. Fibroblasts are stimulated to produce collagen and elastin.
- Physicochemical - accelerate the metabolism in the skin, thus improving the pH on the skin surface, as well as the absorption of nutrients.

NEEDLE-FREE MESOTHERAPY

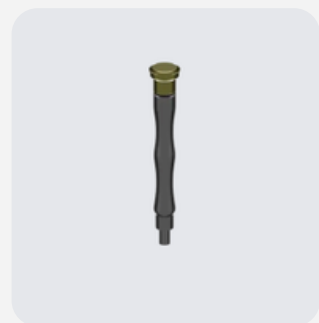

Needle-free mesotherapy involves the introduction of active substances deep into the skin. It is a completely non-invasive method. The device takes advantage of physical phenomena that occur in cell membranes and in the stratum corneum of the skin, which makes it possible to provide new ways of introducing active preparations without the use of needles. During mesotherapy, electroporation occurs. This is a phenomenon that enhances the action of ultrasound waves. It consists of 4 stages and each has strictly defined working parameters. They are designed to enhance the transport of active ingredients deep into the skin and improve blood and lymph flow.

Premium 18in1 Multifunction Combine

SKIN ANALYZER

Thanks to the facial analyzer, we are able to examine one of the most important diagnostic parameters, namely the level of skin hydration. The analyzer was created in order to correctly diagnose the skin and select the appropriate cosmetics for care on this basis. The skin analyzer allows you to control the effects of cosmetic procedures. We recommend taking measurements both before and after treatments. This gives us the necessary information about the condition of the skin and the improvement of its hydration, while the client gets tangible proof from us that the condition of his skin has improved after the treatments. With the analyzer, we are able to take as many as 60 measurements, from 6 independent measuring points. The result is given as a percentage, taking into account the parameter of the patient's age.

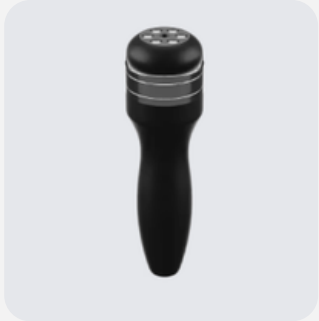

DIAMOND MICRODERMABRASION

Microdermabrasion allows abrasion of the epidermis. It is a gradual process of fully controlled, and taking into account the individual needs of the client, abrasion of the epidermis. This occurs until the desired level is reached. Diamond microdermabrasion treatment stimulates the production of elastin and collagen, and accelerates the natural processes of new, healthy tissue. The treatment makes the skin smoother, brighter and more elastic. Exfoliation of the epidermis also improves the penetration of active ingredients in the next stages of the treatment. The first effects are visible immediately after the treatment.

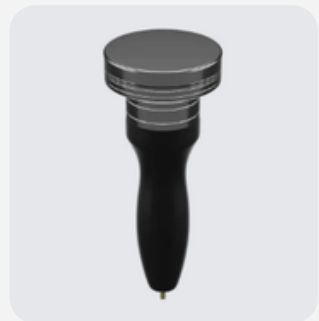

Vacuum Control is a system that we use as the only one in Poland. It relies on the fact that the strength of the size of the vacuum during the procedure is controlled. Thanks to this system, there are no petechiae, bruises or other mechanical damage to the skin.

Premium 18in1 Multifunction Combine

RADIO WAVES

Radiofrequency treatment stimulates fibroblasts to rebuild and produce collagen and elastin, resulting in wrinkle-filling effects. With this treatment, the oval of the face is also improved, sagging cheeks and second chin are eliminated. The radio waves in our device have been enhanced with a 650 nm semiconductor laser beam, this enhances the lifting and therapeutic effect.

ULTRASONIC LIPOSUCTION

Liposuction helps in body contouring. At the beginning of the procedure, the skin is exposed to infrared radiation. This improves cellular metabolism. This is followed by a phase in which ultrasound plays a key role. Under the flow of the waves, fat cells are shrunk, and thanks to the vibrations, the orange peel effect is reduced. The method of ultrasonic liposuction is effective for localized obesity. Fat tissue is reduced where it is hardest to get rid of with ordinary methods.

Premium 18in1 Multifunction Combine

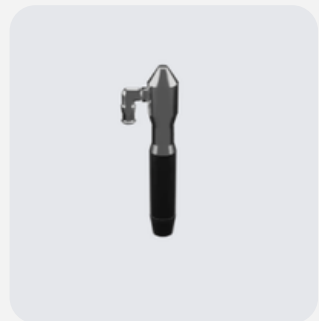

DERMOMASSAGE

During the procedure, skin folds are sucked in by the treatment head, while at the same time special beads demassage the tissue. Edematous-ulcerative changes, which are characteristic of cellulite, will not arise due to regular use of dermomassage. In addition, during the procedure the work of the circulatory system is supported, and the metabolic processes of the skin and subcutaneous tissue are stimulated. Unnecessary products of metabolism are removed from the body. Lymph flow is also improved. The effects of the treatments can also be seen in terms of water retention in the body and the removal of toxins from the body.

Dermomassage counteracts swelling of the lower extremities and the feeling of heavy legs.

Medika is the only one to use the Vacuum Control system, which allows you to control the amount of vacuum during the procedure. Through the use of this innovative system, bruises, petechiae and other minor mechanical damage to the skin are avoided.

OXYBRASION

Oxybrasion is an effective exfoliation of the epidermis. Saline under high pressure hits the epidermis and is dispersed. The friction against the epidermis is so gentle that it does not cause irritation, which is common during this type of treatment. As a result, the skin is refreshed, cleansed, brightened, hydrated and rejuvenated. There is a revitalization of even the most sensitive skin. Thanks to oxybrasion, collagen synthesis with elastin is also stimulated. The skin is tighter and fine wrinkles are shallowed. The cold, which is used in the procedure, has a strengthening effect on the walls of blood vessels, and also soothes reddened skin.

Premium 18in1 Multifunction Combine

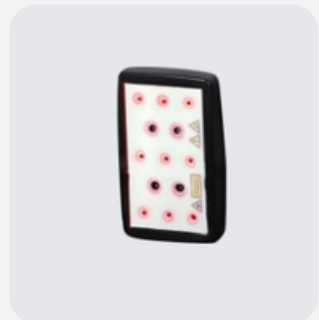

CAVITATION PEELING

Cavitation peeling is one of the most popular cosmetic procedures and is performed in most salons. Medika has introduced innovations to this procedure, which bring the work of peeling to an even higher level. The principle of peeling is based on the use of an ultrasonic wave with a frequency of 25 kHz. This wave, directed at moist skin, produces a cavitation effect. The pressure in the stratum corneum of the skin changes and air bubbles are formed, which are then broken up, and the energy generated by this, removes dead corneocytes. Microcirculation is also improved and the flow of tissue fluids in the deeper layers of the skin improves.

The treatment has 4 programs:

- classical cleansing (i.e. cavitation peeling and sonophoresis)
- proprietary program disincrustation - deep cleansing
- McT's proprietary micromassage program
- proprietary program iontophoresis introduction of active substances

LIPOLASER DUO

Lipolaser Duo is an excellent solution if your patients want to reduce centimeters in circumference. This device uses innovative fat reduction technology. We have added 940 nm infrared to the 650 nm laser beam to assist and enhance the treatment effect.

MEDIKA Skin Analyzer

INTRODUCING THE MEDIKA SKIN ANALYZER

The **MEDIKA Skin Analyzer** is an advanced skin consultation and analysis system designed to transform professional skincare consultations through intelligent skin imaging and comprehensive facial assessment.

Combining high-resolution imaging, multiple light technologies and advanced diagnostic software, the system enables practitioners to evaluate skin condition with exceptional accuracy, identify underlying skin concerns and create personalised treatment plans tailored to every client.

More than just a skin analysis device, the MEDIKA Skin Analyzer helps aesthetic clinics, beauty salons and skincare professionals deliver more engaging consultations, build client confidence and monitor treatment progress with clear visual evidence.

MEDIKA Skin Analyzer

MEDIKA®

Consultation Possibilities / How the MEDIKA Skin Analyzer Supports Your Clinic

The MEDIKA Skin Analyzer is designed to enhance every stage of the client consultation process while supporting personalised treatment planning and long-term client care.

Professional applications include:

- Comprehensive facial and neck skin analysis
- Personalised treatment planning
- Professional skincare recommendations
- Comparative before-and-after consultations
- Monitoring treatment progress throughout treatment programmes
- Product recommendation support
- Skin hydration assessment
- Pigmentation analysis
- Pore and texture evaluation
- Wrinkle assessment
- Skin age evaluation
- Professional client education using visual consultation reports

Every consultation is supported by objective imaging, helping practitioners explain skin concerns more clearly while increasing client understanding **32** and confidence.

MEDIKA Skin Analyzer

mEDIKA®

Technologies Inside the Device

Advanced Multi-Light Skin Imaging Technology

The MEDIKA Skin Analyzer combines professional imaging technology with intelligent analysis software to provide a comprehensive assessment of skin condition.

High-Resolution Digital Imaging

The integrated high-resolution camera captures exceptionally detailed facial images, while the enclosed imaging chamber minimises interference from external light, ensuring highly accurate and consistent results during every consultation.

Four Professional Lighting Modes

The system captures images using four specialised lighting technologies, each revealing different aspects of skin health.

MEDIKA Skin Analyzer

mEDIKA®

Technologies Inside the Device

Normal Light

Evaluates:

- Skin texture
- Pore visibility
- Skin tone
- Fitzpatrick skin type
- Fine lines and wrinkles
- Dark circles

Specular Light

Highlights:

- Hidden wrinkles
- Surface texture
- Skin smoothness
- Overall skin radiance

Polarised Light

Reveals:

- Facial redness
- Vascular concerns
- Surface pigmentation
- Brown spots
- Inflammatory changes

UV Light

Analyses:

- Sebum production
- Porphyrins
- Congested pores
- Deep pigmentation
- Early skin changes invisible under standard lighting

Skin Hydration Measurement

The system also includes an integrated skin hydration measuring device, allowing practitioners to objectively assess moisture levels and support personalised skincare recommendations.

MEDIKA Skin Analyzer

MEDIKA®

Professional Analysis Features

The MEDIKA Skin Analyzer offers a range of advanced consultation tools that help practitioners deliver highly personalised skin assessments.

3D Skin Imaging

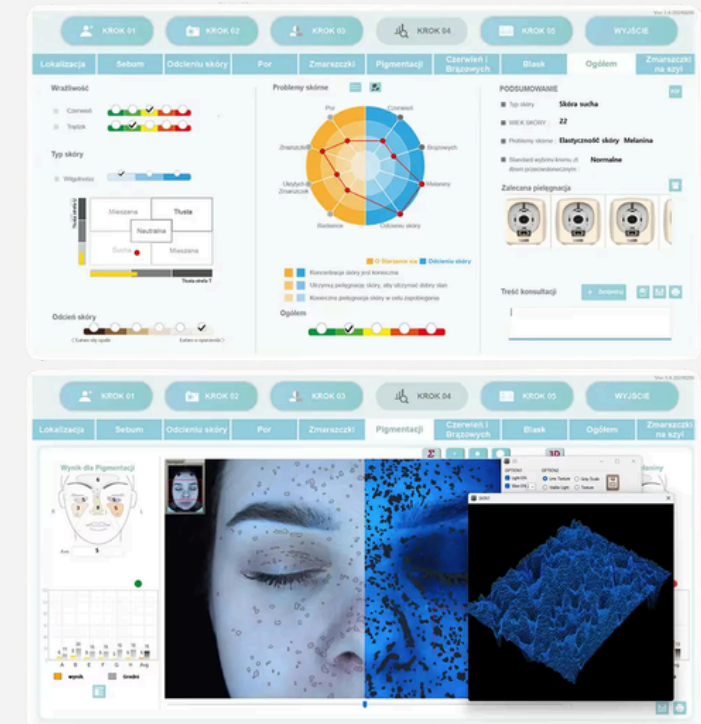

The integrated 3D imaging function allows practitioners to visualise wrinkle depth, pore structure and skin texture in greater detail, providing clients with a clearer understanding of their skin condition.

Treatment Simulation

The software can visually demonstrate potential improvements in selected skin concerns, helping clients better understand treatment goals and expected outcomes.

Pigmentation Assessment

The system analyses pigmentation characteristics, supporting practitioners in selecting the most appropriate treatment protocols, including light-based and laser procedures where applicable.

MEDIKA Skin Analyzer

mEDIKA®

Professional Analysis Features

Comparative Progress Analysis

Every consultation can be securely saved within the integrated client database.

By comparing images captured over multiple appointments, practitioners can clearly demonstrate treatment progress, helping clients visualise improvements and remain engaged throughout their skincare journey.

Professional Consultation Reports

Following each consultation, the MEDIKA Skin Analyzer automatically generates a detailed PDF report including:

- Consultation images
- Analysis results
- Personalised practitioner notes
- Treatment recommendations

Reports can be printed, emailed directly to clients or downloaded instantly via QR code, creating a modern and professional consultation experience.

MEDIKA Skin Analyzer

mEDIKA®

Technical Specification

The MEDIKA Skin Analyzer combines advanced diagnostic technology with intuitive software to deliver highly accurate skin assessments and support professional consultations.

Key features may include:

- High-resolution digital imaging system
- Integrated skin hydration measurement device
- Advanced 3D skin imaging
- Treatment simulation function
- Pigmentation assessment tool
- Comparative before-and-after analysis
- Client database with consultation history
- Professional PDF consultation reports
- QR code report sharing
- Email and print report functionality

MEDIKA Skin Analyzer

mEDIKA®

Business Benefits *

More Than a Skin Analysis Device – A Complete Consultation Platform

The MEDIKA Skin Analyzer is designed to help clinics deliver more professional consultations while supporting treatment planning, client education and long-term business growth.

Improve Consultation Quality

Objective skin analysis allows practitioners to identify concerns that may not be visible during a standard consultation, creating a more personalised and professional client experience.

Build Client Confidence

Visual skin reports help clients better understand their skin condition, making treatment recommendations easier to explain and increasing confidence in the proposed treatment plan.

Support Treatment Programmes

Comparative image analysis allows practitioners to demonstrate measurable improvements throughout treatment programmes, encouraging client commitment and repeat visits.

MEDIKA Skin Analyzer

mEDIKA®

Business Benefits *

Increase Retail Opportunities

Personalised skincare recommendations based on objective skin analysis help support professional retail consultations and product recommendations.

Premium Consultation Experience

Modern imaging technology, detailed reports and advanced consultation tools help position your clinic as a professional provider of personalised aesthetic care.

**Based on average treatment pricing and business model.*

The MEDIKA Skin Analyzer is more than a diagnostic device - it is a professional consultation platform that helps clinics deliver personalised skincare advice, improve treatment planning, strengthen client confidence and support long-term business growth.

The Hydrogen Peel

Professional Hydrogen Facial Device

Deep Skin Cleansing & Instant Glow Therapy

The Hydrogen Peel system is an advanced, non-invasive skin cleansing and rejuvenation technology designed to improve skin clarity, hydration and overall skin appearance.

The device uses hydrogen-infused water technology to deeply cleanse the skin while supporting skin detoxification and revitalisation. Active hydrogen is delivered to the skin through a controlled pressurised water stream, helping remove impurities, excess sebum and dead skin cells.

Hydrogen Peel treatments are widely recognised as a gentle yet effective skin cleansing solution and are often used as a foundation treatment within advanced aesthetic skincare programmes. Treatments are designed to improve skin appearance with minimal downtime, making them highly attractive to clients seeking non-invasive skin rejuvenation.

The Hydrogen Peel

MEDIKA®

Treatment Possibilities

The Hydrogen Peel system supports a wide range of professional facial treatments tailored to individual skin concerns.

Treatment applications may include:

- Deep pore cleansing and skin detoxification
- Skin hydration and revitalisation
- Removal of excess sebum and impurities
- Skin brightening and glow enhancement
- Skin preparation before advanced cosmetic treatments
- Skin texture and tone improvement
- Preventative and maintenance skincare treatments

The system supports personalised treatment planning based on skin type and client goals.

The Hydrogen Peel

MEDIKA®

Technologies Inside the Device

Hydrogen Infusion Technology

The device uses hydrogen infusion technology that generates active hydrogen molecules and delivers them into the skin using controlled pressurised water flow.

Hydrogen molecules are known for their antioxidant properties and help support skin detoxification by helping neutralise environmental impurities.

The system combines deep cleansing with gentle exfoliation, helping remove dead skin cells while maintaining optimal hydration and client comfort.

Integrated vacuum suction and infusion technology supports effective impurity removal while helping improve absorption of professional skincare products.

The Hydrogen Peel

MEDIKA®

Treatment Results / Indications

The Hydrogen Peel system supports practitioners in improving the appearance of multiple skin concerns using personalised treatment protocols.

Suitable for clients concerned with:

- Congested or oily skin
- Enlarged or clogged pores
- Dehydrated and dull looking skin
- Uneven skin texture or tone
- Early visible signs of skin ageing
- Skin requiring detoxification and revitalisation
- Clients seeking preventative skincare solutions

Treatments are designed to improve skin clarity, hydration and overall skin balance while promoting a refreshed and radiant appearance.

Visible skin improvement is often noticeable immediately following treatment, with enhanced results achieved through a recommended course of sessions.

These treatments are particularly popular among clients seeking instant glow and minimal downtime.

The Hydrogen Peel

MEDIKA®

Contraindications & Safety

Hydrogen Peel treatments are cosmetic treatments designed for professional use and require full client consultation prior to each procedure.

Treatments may not be suitable for clients with:

- Pregnancy
- Active skin infections or inflammation
- Open wounds or damaged skin
- Severe skin conditions
- Certain medical conditions or medications affecting skin sensitivity

A full consultation should always be completed prior to treatment.
Final treatment suitability should be assessed by a trained practitioner.

The Hydrogen Peel

MEDIKA®

Technical Specification

The Hydrogen Peel system is designed for professional aesthetic environments, combining reliable performance with intuitive and efficient operation.

Key features may include:

- Hydrogen generation system
- Pressurised water infusion technology
- Vacuum suction cleansing system
- Multiple treatment programmes
- Adjustable treatment intensity levels
- Multi-stage facial treatment capability
- Professional ergonomic design

The system supports flexible treatment planning suitable for various skin types.

MEDIKA®

Business Benefits

Market Demand & Positioning

- High-demand skin cleansing and glow treatment
- Strong client demand for non-invasive facial treatments
- Premium treatment positioning within aesthetic service portfolios
- Helps attract new clients seeking instant skin refresh and glow treatments

Treatment Versatility & Service Expansion

- Suitable for multiple skin types and concerns
- Expands salon facial treatment menu
- Ideal as introductory, maintenance or preparatory treatment
- Can be combined with advanced cosmetic treatments to enhance results
- Encourages repeat client treatment programmes
- Efficient treatment time supporting high client turnover

Profitability & Return on Investment

- Strong income potential per treatment
- High profit margin treatment
- Low consumable cost
- Supports skincare retail opportunities
- Potential return on investment based on treatment pricing and business model

The Hydrogen Peel

MEDIKA®

Profitability & Return on Investment ROI

Hydrogen Peel is positioned as a premium glow treatment within the UK aesthetic market.

Average UK treatment price: £130–£150

Based on an average price of £140:

- 43 treatments to recover £6,000 investment
- Equivalent to approx. 2 months at 5–6 clients per week

High profit margin per treatment with low consumable cost.

Strong potential for recurring income through treatment courses and maintenance programmes.

This advanced skin cleansing and rejuvenation system allows beauty businesses to introduce premium facial treatments, attract new clients and expand service profitability.

This advanced skin cleansing and rejuvenation system allows beauty businesses to introduce premium facial treatments, attract new clients and expand service profitability.

MEDIKA Thermi MED

INTRODUCING THE MEDIKA THERMI MED

The MEDIKA Thermi MED is a professional, non-invasive radiofrequency system designed for advanced face and body treatments.

Using controlled monopolar radiofrequency technology, the device delivers energy to the selected treatment area, creating controlled warming and supporting firmer, smoother and more toned-looking skin.

With three interchangeable treatment heads, intelligent temperature and impedance monitoring and dedicated treatment programmes, Thermi MED provides beauty professionals with a versatile solution for both facial and body treatments.

MEDIKA *Thermi MED*

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA Thermi MED supports a wide range of professional face and body treatments.

Treatment applications may include:

- Facial skin firming
- Improving the appearance of fine lines and wrinkles
- Facial contouring
- Jawline and neck treatments
- Eye-area treatments
- Body skin firming
- Body contouring
- Improving the appearance of cellulite
- Improving the appearance of areas with localised fat
- Treatments focused on smoother and more toned-looking skin
- Combination face and body treatment programmes

Different treatment heads and programmes allow treatments to be adapted according to the selected area and individual client needs.

58

MEDIKA®

MEDIKA *Thermi MED*

MEDIKA®

Technologies Inside the Device

Monopolar Radiofrequency Technology

The MEDIKA Thermi MED uses professional monopolar radiofrequency technology with two operating frequencies:

- 475 kHz
- 300 kHz

Temperature Control

The system monitors treatment temperature to support controlled and consistent treatment delivery.

Impedance Monitoring

Thermi MED measures impedance within the selected treatment area, allowing the system to adapt energy delivery during treatment.

Automatic Energy Stabilisation

The device is designed to maintain stable energy delivery according to the selected treatment parameters.

Three Interchangeable Treatment Heads

The system includes:

- 30 mm treatment head
- 60 mm treatment head
- 80 mm treatment head

Different head sizes allow practitioners to work comfortably across smaller facial areas and larger body areas.

MEDIKA *Thermi MED*

MEDIKA®

Treatment Results / Indications

The MEDIKA Thermi MED is suitable for clients looking to improve the overall appearance, firmness and contours of the face and body.

Suitable for clients concerned with:

- Loss of skin firmness
- Fine lines and wrinkles
- Less defined facial contours
- Loose-looking skin
- Uneven-looking body contours
- The appearance of cellulite
- Areas with localised fat
- Skin requiring additional firming and toning
- Overall skin appearance and texture

A course of treatments may support firmer, smoother and more toned-looking skin and improved appearance of facial and body contours.

Individual results may vary depending on the client's starting point, lifestyle and recommended treatment programme.

MEDIKA Thermi MED

MEDIKA®

Contraindications & Safety

The MEDIKA Thermi MED is intended for professional use following a full client consultation and suitability assessment.

Treatment may not be suitable in circumstances including:

- Pregnancy or breastfeeding
- Pacemakers or implanted electronic devices
- Metal implants within the treatment area
- Active skin infections or inflammation
- Active cancer or recent cancer treatment
- Epilepsy
- Uncontrolled high blood pressure
- Certain circulatory conditions
- Certain conditions or medications that may affect treatment suitability
- Recent injectable or advanced skin treatments where an appropriate waiting period is required

Final treatment suitability and treatment parameters should always be assessed by an appropriately trained practitioner.

A full consultation should always be completed before treatment.

MEDIKA Thermi MED

The MEDIKA Thermi MED is available for professional beauty and aesthetic businesses looking to expand their face and body treatment portfolio.

With multiple treatment possibilities from one device, three interchangeable treatment heads and applications for both facial and body treatments, Thermi MED offers excellent potential for creating treatment courses, combination treatments and long-term client programmes.

Its versatility allows businesses to expand their treatment menu without investing in several separate devices.

HIFU

The HIFU aesthetic system is an advanced non-invasive technology designed to support skin lifting, firming and rejuvenation using focused ultrasound energy.

The device is ideal for aesthetic professionals and beauty clinics looking to introduce high-demand skin tightening and contouring treatments.

Focused ultrasound delivers precise energy into deeper skin layers, supporting natural collagen regeneration and improving skin structure and appearance.

HIFU technology is widely recognised as one of the leading non-surgical lifting solutions, offering visible aesthetic improvements with minimal downtime.

HIFU

MEDIKA®

Treatment Possibilities

The HIFU system supports a wide range of face and body beauty treatments.

Treatment applications may include:

- Skin lifting and firming treatments
- Facial contour definition
- Jawline and double chin appearance improvement
- Skin tightening treatments for neck and décolletage
- Body skin firming and contouring
- Skin texture and appearance improvement

The device allows personalised treatment planning tailored to different skin needs and beauty goals.

Treatments are designed to provide visible aesthetic improvements with minimal downtime.

HIFU

MEDIKA®

Technologies Inside the Device

The device uses High Intensity Focused Ultrasound (HIFU) technology, delivering concentrated ultrasound energy to targeted layers of the skin.

This technology supports skin tightening by stimulating natural collagen renewal and improving skin structure and elasticity.

Interchangeable treatment cartridges allow procedures to be performed at different skin depths, enabling customised treatment options for both face and body areas.

Focused ultrasound delivers precise energy to targeted skin layers while maintaining surface skin integrity.

Treatment Results / Indications

The HIFU system supports practitioners in addressing multiple skin concerns using personalised treatment protocols.

Suitable for clients concerned with:

- Visible signs of skin ageing
- Loss of skin firmness and elasticity
- Skin laxity in face and body areas
- Uneven skin texture
- Localised areas requiring contour improvement

Treatments are designed to enhance overall skin appearance, improve firmness and promote a refreshed, lifted look. Improvements may develop gradually over 8–12 weeks as natural collagen stimulation occurs. Visible results are typically achieved over a course of recommended treatments.

Focused ultrasound treatments support natural lifting and tightening effects while maintaining natural skin appearance.

Contraindications & Safety

Treatments are designed for professional cosmetic use and require full client consultation prior to each procedure.

Treatments may not be suitable for clients with:

- Pregnancy
- Active skin infections or inflammation
- Open wounds or damaged skin
- Severe skin conditions
- Certain medical conditions or medications affecting skin sensitivity

Final suitability for treatment should always be assessed by a trained practitioner.

A full medical and lifestyle consultation is required prior to treatment.

HIFU

MEDIKA®

Technical Specification

The HIFU device is designed for professional aesthetic environments, combining reliable performance with intuitive operation.

Key features may include:

- Touch screen control system
- Interchangeable treatment cartridges
- Adjustable energy and depth settings
- Multiple treatment modes for face and body
- Professional ergonomic design

The system supports treatment at various skin depths, allowing flexible treatment planning.

Technical data

Business Benefits *

Market Demand & Positioning

- High-demand anti-ageing treatment
- Strong client demand within the non-invasive anti-ageing market
- Premium treatment positioning

Treatment Versatility & Service Expansion

- Suitable for both face and body treatments
- Expands salon treatment menu
- Encourages repeat client treatment programmes
- Efficient treatment time

Profitability & Return on Investment

- Strong income potential per treatment
- High profit margin treatment
- Low consumable cost
- Potential return on investment after approximately 30–40 treatments

*Based on average treatment pricing and business model.

Profitability & Return on Investment ROI

Hydrogen Peel is positioned as a premium glow treatment within the UK aesthetic market.

Average UK treatment price: £130–£150

Based on an average price of £140:

- 43 treatments to recover £6,000 investment
- Equivalent to approx. 2 months at 5–6 clients per week

High profit margin per treatment with low consumable cost.

Strong potential for recurring income through treatment courses and maintenance programmes.

HIFU

MEDIKA®

Why Beauty Professionals Choose HIFU

- Popular non-invasive lifting technology
- Visible skin tightening and contouring results
- Suitable for multiple treatment areas
- Comfortable treatment experience
- Premium and modern treatment offering
- Enhances salon service positioning
- Supports long-term client retention and treatment planning programmes

Focused ultrasound is widely recognised as one of the leading non-invasive skin tightening technologies.

This advanced lifting system allows beauty businesses to introduce premium anti-ageing treatments and expand service possibilities.

LUMINIR DPL + NIR System

INTRODUCING THE LUMINIR DPL + NIR SYSTEM

The LUMINIR DPL + NIR System is an advanced light-based aesthetic platform designed to support a wide range of non-invasive skin rejuvenation and cosmetic treatments.

Combining Dynamic Pulse Light (DPL) and Near Infrared (NIR) technologies, the system allows practitioners to personalise treatment protocols for different skin concerns while supporting skin comfort and minimal downtime.

With multiple treatment handpieces, interchangeable filters and integrated skin analysis, the LUMINIR system offers exceptional versatility for modern aesthetic clinics and beauty professionals looking to expand their treatment portfolio.

LUMINIR DPL + NIR System

Treatment Possibilities / What Treatments Can Be Performed

The LUMINIR DPL + NIR System supports a broad range of professional aesthetic treatments for the face and body.

Treatment applications may include:

- Support for improving the appearance of uneven skin tone
- Support for reducing the appearance of pigmentation
- Support for improving the appearance of visible redness
- Skin rejuvenation and photorejuvenation treatments
- Support for improving overall skin texture
- Support for reducing the appearance of enlarged pores
- Hair reduction treatments
- Support for improving the appearance of acne-prone skin
- NIR skin rejuvenation treatments to support firmer-looking skin
- Personalised treatment protocols using dedicated treatment handpieces and filters

Treatments are individually tailored according to skin condition, treatment goals and practitioner assessment.

MEDIKA®

LUMINIR DPL + NIR System

MEDIKA®

Technologies Inside the Device

Advanced DPL + NIR Technology

The LUMINIR DPL + NIR System combines Dynamic Pulse Light (DPL) with Near Infrared (NIR) technology, providing exceptional treatment versatility for a wide range of aesthetic procedures.

Dynamic Pulse Light (DPL) uses narrow-band light technology to support treatments targeting uneven skin tone, pigmentation, visible redness, skin rejuvenation and long-term hair reduction.

Near Infrared (NIR) technology gently heats the deeper layers of the skin, supporting the skin's natural renewal processes and helping improve the appearance of firmness, elasticity and overall skin quality.

Multiple interchangeable treatment handpieces, dedicated optical filters and integrated HD skin analysis enable practitioners to create highly personalised treatment protocols for different skin concerns.

LUMINIR DPL + NIR System

MEDIKA®

Treatment Results / Indications

The LUMINIR DPL + NIR System supports practitioners in improving a wide variety of aesthetic skin concerns through individually tailored treatment protocols.

Suitable for clients concerned with:

- Uneven skin tone
- The appearance of pigmentation
- Visible facial redness
- Dull-looking skin
- Enlarged pores
- Fine lines and early visible signs of skin ageing
- Unwanted hair
- Clients seeking non-invasive skin rejuvenation treatments with minimal downtime

Visible improvements typically develop progressively throughout a recommended course of treatments. Individual results may vary depending on skin condition, treatment protocol and adherence to aftercare recommendations.

LUMINIR DPL + NIR System

MEDIKA®

Contraindications & Safety

LUMINIR DPL + NIR treatments are professional aesthetic procedures intended for qualified practitioners and require a full client consultation before every treatment.

Treatments may not be suitable for clients with:

- Pregnancy
- Active skin infections or inflammation
- Open wounds or compromised skin
- Photosensitive skin conditions
- Certain medications affecting skin sensitivity
- Recently tanned skin
- A history of abnormal wound healing or light sensitivity

Final treatment suitability should always be assessed by a trained practitioner.

A full consultation and treatment assessment should always be completed before every procedure.

LUMINIR DPL + NIR System

MEDIKA®

Technical Specification

The LUMINIR DPL + NIR System is designed for professional aesthetic clinics, combining advanced light-based technology with intelligent operation and exceptional treatment versatility.

SECTION 03

FACIAL LASER TECHNOLOGIES

03

MEDIKA Laser V Light

INTRODUCING THE MEDIKA LASER V LIGHT

The MEDIKA Laser V Light is a professional diode laser system designed for advanced aesthetic treatments focused on the appearance of visible superficial vessels and vascular imperfections.

Using a precise 810 nm diode laser wavelength, the system delivers controlled laser energy to selected areas while allowing practitioners to customise treatment parameters according to the individual client and treatment area.

With an adjustable treatment spot, advanced cooling system and intuitive touchscreen interface, the MEDIKA Laser V Light provides beauty and aesthetic professionals with precision, control and flexibility.

Suitable for professional aesthetic clinics and advanced beauty practices, the system is designed for practitioners looking to expand their portfolio with specialised laser-based aesthetic treatments.

MEDIKA Laser V Light

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA Laser V Light is designed for professional aesthetic treatments targeting the appearance of visible superficial vascular imperfections.

Treatment applications may include:

- Visible facial thread veins
- Small superficial visible vessels
- Localised facial redness associated with visible vessels
- Small red vascular-looking imperfections
- Selected visible vascular imperfections
- Treatments focused on improving the appearance of uneven skin redness
- Precision treatments of individual visible superficial vessels
- Treatments of selected areas of the face and body where suitable

The adjustable treatment spot allows practitioners to work precisely on both very small individual areas and larger selected treatment zones.

Treatment suitability and parameters should always be determined following an individual client consultation and professional assessment.

MEDIKA®

MEDIKA Laser V Light

MEDIKA®

Technologies Inside the Device

810 nm Diode Laser Technology

The MEDIKA Laser V Light uses an 810 nm semiconductor diode laser, a wavelength selected for its interaction with haemoglobin within visible vessels.

Controlled laser energy is directed precisely towards the selected treatment area, allowing practitioners to target visible vascular imperfections while limiting unnecessary exposure of the surrounding area.

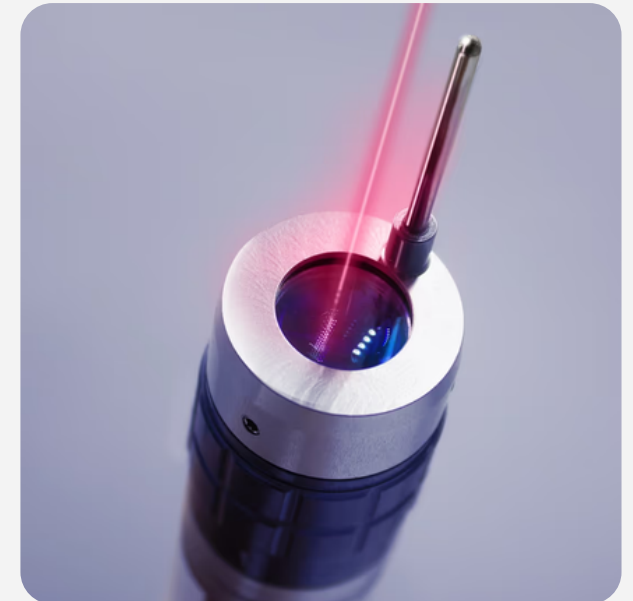

Adjustable Treatment Spot

One of the key advantages of the V Light system is its smoothly adjustable treatment spot.

The spot size can be adjusted from:

0.5–3 mm

without the need to change or remove the treatment handpiece, providing excellent flexibility when working with different sizes of visible vessels.

MEDIKA Laser V Light

mEDIKA®

Technologies Inside the Device

Adjustable Laser Parameters

Practitioners can customise:

Pulse duration

Pulse frequency

Treatment spot size

Energy settings

This allows treatments to be individually adapted according to the selected area and client requirements.

Advanced Cooling System

The system combines:

Air cooling

Semiconductor cooling

Coolant cooling

The closed cooling system is designed to support stable device performance and client comfort during professional treatments.

Precision Optical Fibre Delivery

Laser energy is delivered through a

200 µm

optical fibre, providing precise application to the selected treatment area.

MEDIKA Laser V Light

MEDIKA®

Treatment Results / Indications

The MEDIKA Laser V Light is suitable for clients looking to improve the cosmetic appearance of visible superficial vascular imperfections.

Suitable for clients concerned with:

- Visible facial thread veins
- Small visible superficial vessels
- Localised areas of visible redness
- Small red vascular-looking imperfections
- Uneven-looking redness associated with superficial vessels
- Individual visible vessels affecting the appearance of the skin

The aim of treatment is to progressively reduce the visible appearance of selected superficial vascular imperfections and create a clearer, more even-looking complexion.

The number of treatments required will depend on the type, size and location of the visible vessel as well as individual client response. Individual results may vary.

MEDIKA Laser V Light

MEDIKA®

Contraindications & Safety

The MEDIKA Laser V Light is intended for professional use following a comprehensive client consultation and suitability assessment.

Treatment may not be suitable in circumstances including:

- Pregnancy and breastfeeding
- Active cancer
- Certain uncontrolled health conditions
- Epilepsy
- Certain skin conditions within the treatment area
- Active bacterial or viral skin infections
- Tendency to develop keloid scarring
- Recent use of alternative hair-removal methods within the treatment area
- Blood clotting disorders
- Photosensitivity
- Use of photosensitising medication or supplements
- Certain medications affecting blood clotting
- Recent use of certain antibiotics
- Fresh tan or recent intensive sun exposure
- Certain pigmentation conditions
- Any condition or medication that may affect suitability for laser treatment

MEDIKA Laser V Light

mEDIKA®

Contraindications & Safety

Medication, supplements, recent sun exposure and relevant treatment history should always be discussed during consultation.

A patch test should be performed where required and treatment should begin using appropriately selected parameters.

Protective laser eyewear must be worn by both the client and practitioner whenever the laser is in operation.

Final treatment suitability and treatment parameters should always be assessed by an appropriately trained and qualified laser practitioner.

MEDIKA Laser V Light

MEDIKA®

Technical Specification

The MEDIKA Laser V Light combines precise diode laser technology with adjustable treatment parameters and an advanced cooling system.

Key features may include:

- Professional 810 nm Diode Laser System
- Precision Treatment of Visible Superficial Vascular Imperfections

NON-INVASIVE BODY TECHNOLOGIES

04

MEDIKA Sauna Blanket

INTRODUCING THE MEDIKA SAUNA BLANKET

The **MEDIKA Sauna Blanket** is a professional infrared body therapy system designed to complement body contouring, wellness and recovery treatments within aesthetic clinics, beauty salons, spas and wellness centres.

Using controlled infrared heat technology, the system delivers a comfortable, non-invasive treatment that supports relaxation, healthy circulation and overall wellbeing. It can be incorporated into body contouring programmes, recovery protocols and wellness treatments, offering clients a relaxing and revitalising experience.

Designed for modern aesthetic and wellness businesses, the MEDIKA Sauna Blanket provides an additional premium treatment option that can easily be integrated into existing service menus.

MEDIKA Sauna Blanket

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA Sauna Blanket supports a variety of professional wellness and body treatments.

Treatment applications may include:

- Infrared wellness therapy
- Body contouring support programmes
- Treatments supporting the appearance of cellulite
- Relaxation and stress management sessions
- Muscle recovery following physical activity
- Treatments supporting healthy circulation
- Complementary body contouring programmes
- Wellness treatments supporting an active lifestyle
- Recovery treatments following aesthetic body procedures
- General relaxation and wellbeing sessions

Treatment protocols should always be tailored to individual client needs and professional assessment.

Professional Infrared Heat Technology

The MEDIKA Sauna Blanket uses advanced infrared heat technology to gently warm the body during treatment.

Infrared energy is absorbed by the superficial layers of the skin, creating a comfortable warming effect that supports natural physiological responses associated with heat therapy. The warming sensation also contributes to relaxation and overall client comfort throughout the treatment.

Dual Heating Zone System

The blanket incorporates two independently heated zones, allowing even heat distribution across the body while maintaining a comfortable treatment experience.

Adjustable Temperature Control

Treatment temperature can be adjusted up to 60°C, enabling practitioners to personalise sessions according to client comfort and treatment objectives.

Professional Touchscreen Interface

An intuitive 8-inch touchscreen allows practitioners to adjust treatment settings quickly and efficiently, supporting a smooth and user-friendly workflow.

MEDIKA Sauna Blanket

MEDIKA®

Treatment Results / Indications

The MEDIKA Sauna Blanket is suitable for clients seeking relaxing infrared body treatments and complementary wellness therapies.

Suitable for clients concerned with:

- The appearance of cellulite
- Body contouring support
- Reduced skin firmness
- Tired or heavy legs
- General muscle tension
- Stress and fatigue
- Supporting healthy circulation
- Recovery following physical activity
- Wellness and relaxation
- Complementary treatments within body contouring programmes

Many clients describe treatments as deeply relaxing, warming and revitalising. Individual experiences and outcomes may vary depending on lifestyle, treatment frequency and overall health.

MEDIKA Sauna Blanket

mEDIKA®

Contraindications & Safety

The MEDIKA Sauna Blanket is intended for professional use following a full client consultation.

Treatments may not be suitable for clients with:

- Pregnancy or suspected pregnancy
- Uncontrolled hypertension
- Circulatory insufficiency
- Recent stroke
- Multiple sclerosis
- Active malignant disease
- Fungal skin infections
- Kidney or liver disorders
- Lupus erythematosus
- Epilepsy
- Haemophilia

Final treatment suitability should always be assessed by a qualified practitioner.

A full consultation should always be completed before treatment to determine individual suitability.

MEDIKA Sauna Blanket

MEDIKA®

Technical Specification

The MEDIKA Sauna Blanket is designed to provide reliable infrared body therapy while offering simple operation and consistent treatment performance for professional clinics and beauty salons.

Key features may include:

- Professional infrared heat therapy system
- Dual heating zone technology

MEDIKA Presso Therapy

INTRODUCING MEDIKA PRESSO THERAPY

MEDIKA Presso Therapy is a professional pneumatic compression system designed for beauty salons, aesthetic clinics, wellness centres and spas.

The treatment uses controlled air pressure delivered through a specially designed full-body suit. Different sections of the suit inflate and deflate in sequence, creating a comfortable compression massage.

Presso Therapy is ideal for salons looking to expand their body treatment menu with a relaxing, non-invasive treatment supporting body contouring, skin appearance and a feeling of lighter legs.

MEDIKA Presso Therapy

Treatment Possibilities / What Treatments Can Be Performed

MEDIKA Presso Therapy can be incorporated into a wide range of professional beauty and wellness treatments:

- Body contouring support
- Improving the appearance of cellulite
- Supporting the appearance of smoother-looking skin
- Relaxation and wellbeing treatments
- Treatments for tired and heavy-feeling legs
- Supporting a feeling of lightness in the body
- Complementary treatment within body-care programmes
- Full-body pneumatic compression massage

MEDIKA®

MEDIKA Presso Therapy

mEDIKA®

Technologies Inside the Device

Pneumatic Compression Technology

Controlled air pressure sequentially inflates individual sections of the treatment suit to create a rhythmic compression massage.

Multiple Treatment Programmes

The system provides different programme options and sequences for individual treatment goals.

Aesthetic Mode

Includes programmes designed for body shaping support and treatments focused on the appearance of cellulite.

Relaxing Mode

Offers soft and more intensive programmes for the arms, abdomen, legs or whole body.

Adjustable Treatment Settings

Allows the treatment to be adapted to different body areas and individual client needs.

MEDIKA Presso Therapy

mEDIKA®

Key Benefits

- Non-invasive treatment
- Comfortable and relaxing for the client
- Supports body contouring programmes
- Helps improve the appearance of cellulite
- Supports smoother-looking skin
- Creates a feeling of lighter, refreshed legs
- Suitable for different areas of the body
- Multiple ready-to-use treatment programmes
- Excellent addition to existing body treatments
- Minimal operator involvement during treatment

MEDIKA Presso Therapy

Technical Specification

Key features may include:

Trio SLD Laser

MEDIKA®

Business Benefits

Market Demand & Positioning

- High-demand laser hair reduction service
- Strong client demand for long-term smooth skin results
- Premium treatment positioning within aesthetic service portfolios
- Helps attract new clients actively looking for laser hair reduction

Treatment Versatility & Service Expansion

- Suitable for multiple treatment areas (face + body)
- Supports a wide range of skin tones and hair characteristics (thanks to 3 wavelengths)
- Efficient treatment workflow (large spot size supports faster appointments)
- Encourages repeat client programmes and package sales
- Suitable for both female and male clients

Profitability & Return on Investment

- Strong income potential per treatment
- High profit margin treatment
- Low consumable cost
- Potential return on investment based on treatment pricing and business model

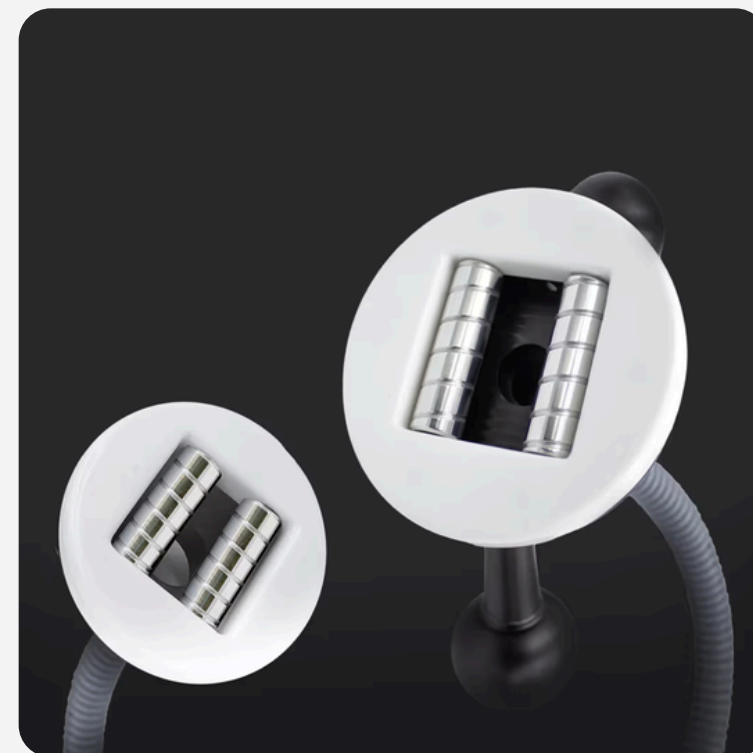

MEDIKA Vacuum Rolls

INTRODUCING THE MEDIKA VACUUM ROLLS

The **MEDIKA Vacuum Rolls** is a professional Vacuum Roller Massage system designed to support body contouring, improve skin firmness and complement cellulite treatment programmes.

Combining controlled vacuum technology with mechanical roller massage, the system stimulates connective tissue, supports healthy circulation and promotes smoother, firmer-looking skin. It is an excellent addition to aesthetic clinics, beauty salons, spas and wellness centres looking to expand their body treatment portfolio with effective, non-invasive body therapies.

Suitable as both a standalone treatment and as part of comprehensive body contouring programmes, the MEDIKA Vacuum Rolls delivers comfortable treatments while supporting visible improvements in overall skin appearance.

MEDIKA Vacuum Rolls

Treatment Possibilities / What Treatments Can Be Performed

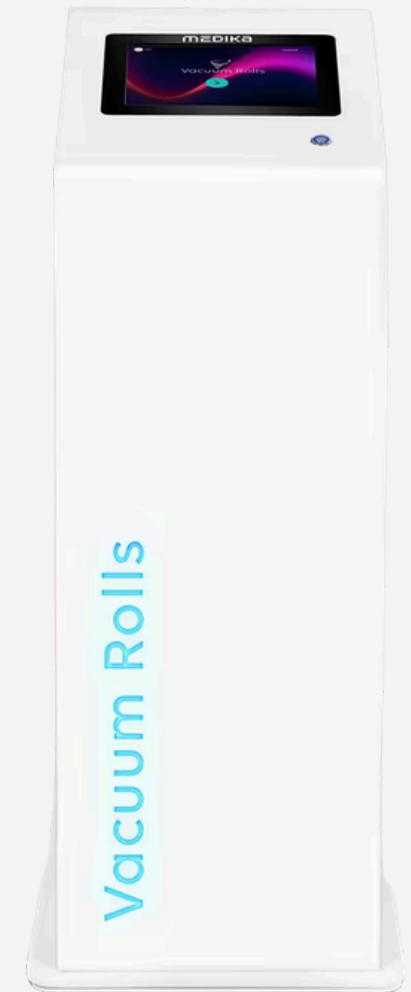

The MEDIKA Vacuum Rolls supports a wide range of professional body treatments.

Treatment applications may include:

- Professional Vacuum Roller Massage
- Body contouring programmes
- Treatments supporting the appearance of cellulite
- Skin firming treatments
- Treatments supporting skin elasticity
- Treatments supporting healthy circulation
- Lymphatic drainage support
- Post-weight-loss skin firming programmes
- Post-pregnancy body treatments
- Complementary treatments following body contouring procedures
- Wellness and recovery body treatments

Treatment protocols should always be tailored to the individual client's needs and professional assessment.

MEDIKA®

MEDIKA Vacuum Rolls

mEDIKA®

Technologies Inside the Device

Advanced Vacuum Roller Massage Technology

The MEDIKA Vacuum Rolls combines controlled vacuum technology with mechanical roller massage to deliver effective stimulation of the skin and underlying connective tissue.

During treatment, controlled vacuum gently lifts the tissue while specially designed rollers massage the treatment area. This mechanical stimulation supports healthy blood and lymphatic circulation, encourages fibroblast activity and helps improve the appearance of skin firmness and texture.

Vacuum Stabilisation Technology

The integrated Vacuum Stabilisation System maintains consistent suction throughout treatment, ensuring predictable performance while maximising client comfort.

Mechanical Roller Massage

The rotating rollers work together with controlled vacuum to mobilise connective tissue, helping support body contouring programmes and improve the appearance of cellulite.

MEDIKA Vacuum Rolls

mEDIKA®

Technologies Inside the Device

Preset Treatment Programmes

Ready-to-use treatment programmes simplify everyday operation while helping practitioners deliver consistent treatment protocols efficiently.

Professional Touchscreen Interface

An intuitive 8-inch touchscreen provides quick access to treatment settings, making the system easy to operate within busy clinical environments.

MEDIKA Vacuum Rolls

MEDIKA®

Treatment Results / Indications

The MEDIKA Vacuum Rolls is suitable for clients seeking professional, non-invasive body contouring and skin-firming treatments.

Suitable for clients concerned with:

- The appearance of cellulite
- Loss of skin firmness
- Reduced skin elasticity
- Uneven skin texture
- Body contouring support
- Localised areas requiring body sculpting support
- Supporting healthy circulation
- Supporting lymphatic drainage
- Post-weight-loss skin care
- Post-pregnancy skin firming
- General body wellness

Visible improvements typically develop progressively throughout a recommended course of treatments.
Individual results may vary depending on lifestyle, treatment frequency and adherence to professional recommendations.

MEDIKA Vacuum Rolls

mEDIKA®

Contraindications & Safety

The MEDIKA Vacuum Rolls is intended for professional use following a full client consultation.

Treatments may not be suitable for clients with:

- Active inflammatory skin conditions
- Deep vein thrombosis
- Advanced peripheral arterial disease
- Fever
- Active bleeding disorders
- Active malignant disease
- Pacemaker
- Uncontrolled thyroid disorders
- Uncontrolled diabetes
- Multiple sclerosis during active flare-ups
- Uncontrolled hypertension
- Epilepsy
- Recent heart attack
- Pregnancy (except where treatment is considered appropriate following professional assessment)

Final treatment suitability should always be assessed by a qualified practitioner.

A full consultation should always be completed before treatment to determine individual suitability.

MEDIKA Vacuum Rolls

MEDIKA EMShape

INTRODUCING MEDIKA EMShape

The MEDIKA EMShape is a professional body contouring device designed to support muscle toning, body sculpting and improved body definition.

Using advanced high-intensity electromagnetic technology, EMShape creates powerful muscle contractions in targeted areas without the need for invasive procedures.

The system offers a modern, hands-free approach to body treatments and can be used across multiple areas, making it an excellent addition to beauty salons, aesthetic clinics and body contouring studios.

MEDIKA EMShape

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA EMShape supports a wide range of professional body contouring and muscle toning treatments.

Treatment programmes may include:

- Abdominal toning and definition
- Waist contouring
- Buttock toning and shaping
- Thigh contouring
- Arm toning
- Calf toning
- Improving the appearance of body contours
- Supporting firmer-looking body areas
- Muscle toning programmes
- Body sculpting programmes
- Treatments supporting the appearance of cellulite-prone areas
- Complementary body contouring programmes

Treatment settings and programmes should always be selected according to the individual client's needs and professional assessment.

MEDIKA®

MEDIKA EMShape

MEDIKA®

Technologies Inside the Device

High-Intensity Electromagnetic Technology

The MEDIKA EMShape uses high-intensity electromagnetic technology to create powerful, repeated muscle contractions within the selected treatment area.

These contractions are significantly more intense and frequent than those normally achieved through voluntary muscle engagement, providing an intensive muscle-stimulating experience without traditional exercise.

Targeted Treatment Applicators

Dedicated applicators are positioned directly over the selected body area and secured with treatment straps, allowing focused and hands-free treatments.

Technologies Inside the Device

Automatic & Manual Treatment Modes

Practitioners can choose between ready-to-use automatic programmes and manual settings, providing flexibility for different body areas and treatment goals.

Dedicated Body Programmes

The system provides programmes for areas including:

- Abdomen
- Buttocks
- Thighs
- Arms
- Calves

The system offers different treatment approaches, including Slimming Training and Sculpting Training, allowing programmes to be selected according to the client's body contouring goals.

MEDIKA EMShape

MEDIKA®

Treatment Results / Indications

The MEDIKA EMShape is suitable for clients looking to improve body definition and enhance the appearance of selected areas without invasive procedures.

Suitable for clients concerned with:

- Lack of muscle definition
- Loss of body tone
- Less defined abdominal contours
- Flat or less defined buttocks
- Areas requiring additional toning
- Less defined waistline
- Areas resistant to traditional body contouring routines
- The appearance of cellulite
- Overall body contour and definition

A course of treatments may progressively support a firmer, more toned and defined appearance.

Individual results may vary depending on the client's starting point, lifestyle and recommended treatment programme.

MEDIKA EMShape

MEDIKA®

Contraindications & Safety

The MEDIKA EMShape is intended for professional use following a full client consultation.

Treatments may not be suitable for clients with:

- Pregnancy or breastfeeding
- Pacemakers or implanted electrical devices
- Metal implants within the treatment area
- Copper IUD
- Active cancer
- Certain heart conditions
- Active skin conditions within the treatment area
- Other conditions where electromagnetic treatments are not recommended

Jewellery and other metal objects should be removed from the treatment area before treatment.

Final treatment suitability should always be assessed by a qualified practitioner.

A full consultation and suitability assessment should always be completed before treatment.

MEDIKA EMShape

MEDIKA®

Technical Specification

The MEDIKA EMShape combines advanced electromagnetic technology with intuitive controls for efficient professional body treatments.

SECTION 05

BODY LASER & HAIR REMOVAL TECHNOLOGIES

05

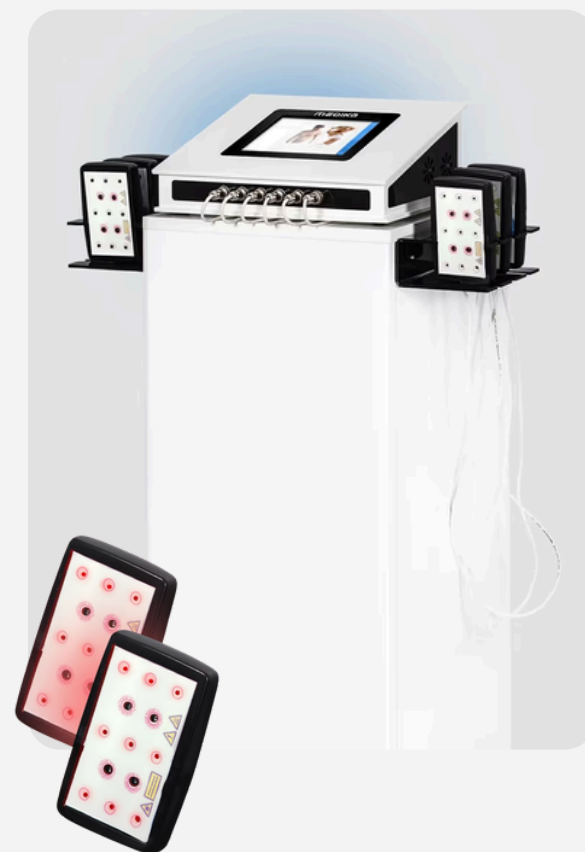

MEDIKA LipoLaser DUO

INTRODUCING THE MEDIKA LIPOLASER DUO

The MEDIKA LipoLaser DUO is a professional, non-invasive body contouring system designed to support slimming, body shaping and the improvement of overall body appearance.

The device combines two complementary technologies — 650 nm red laser light and 940 nm infrared technology — delivered through six treatment pads.

Designed for use in beauty salons, aesthetic clinics and body contouring practices, the MEDIKA LipoLaser DUO offers an easy-to-use, comfortable and versatile solution for professional body treatments.

MEDIKA LipoLaser DUO

MEDIKA®

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA LipoLaser DUO supports a wide range of professional body contouring treatments.

Treatment applications may include:

- Abdomen contouring
- Thigh contouring
- Buttock contouring
- Arm contouring
- Slimming treatments
- Body shaping programmes
- Treatments supporting the appearance of localised fatty areas
- Treatments focused on improving the appearance of cellulite
- Firming and body contouring programmes
- Complementary body treatment programmes

The device includes dedicated programmes for different body areas and allows treatment intensity to be selected according to individual client needs.

MEDIKA LipoLaser DUO

MEDIKA®

Technologies Inside the Device

Dual-Wavelength Technology

The MEDIKA LipoLaser DUO combines:

650 nm
red laser light

940 nm
infrared technology

This dual-wavelength approach is designed to support professional non-invasive body contouring treatments.

Six Treatment Pads

The system includes 6 treatment pads, allowing multiple areas to be treated efficiently.

Dedicated Treatment Programmes

The device includes predefined programmes for different body areas, including:

- Arms
- Abdomen
- Thighs
- Buttocks

Adjustable Treatment Intensity

Three intensity levels are available:

MINI | **MIDI** | **MAXI**

Suggested treatment parameters are automatically selected according to the chosen programme, helping to simplify everyday operation.

Touchscreen Interface

The large **8-inch full-colour touchscreen** provides clear access to treatment programmes and settings.

MEDIKA LipoLaser DUO

MEDIKA®

Treatment Results / Indications

The MEDIKA LipoLaser DUO is suitable for clients looking to improve body shape and the appearance of selected areas without invasive procedures.

Suitable for clients concerned with:

- Localised fatty areas
- Less defined body contours
- Areas resistant to traditional slimming routines
- The appearance of cellulite
- Loss of body firmness
- Uneven-looking body contours
- Areas requiring additional shaping and definition

A course of treatments may support a smoother, more contoured and more defined body appearance. Individual results may vary depending on the client's starting point, lifestyle and recommended treatment programme.

MEDIKA LipoLaser DUO

MEDIKA®

Contraindications & Safety

The MEDIKA LipoLaser DUO is intended for professional use following a full client consultation.

Treatments may not be suitable for clients with:

- Pregnancy or breastfeeding
- Active cancer
- Certain uncontrolled health conditions
- Certain heart conditions
- Diabetes
- Uncontrolled blood pressure
- Active wounds or recent surgery
- Skin hypersensitivity
- Menstruation where treatment suitability is affected
- Recent slimming medication where applicable
- Other conditions where light-based or body contouring treatments may not be recommended

The treatment area should be properly prepared and treatment pads should be cleaned and disinfected before and after each use. Final treatment suitability should always be assessed by a qualified practitioner.

A full consultation should always be completed before treatment to determine individual suitability

MEDIKA LipoLaser DUO

MEDIKA®

808 Diode Laser

The Diode Laser SLD 808 system is an advanced, non-invasive hair reduction technology designed to support long-term reduction of unwanted hair while maintaining skin comfort.

The device uses an 808 nm wavelength designed to target hair pigment, supporting effective hair reduction while maintaining skin surface protection.

Diode Laser SLD 808 treatments are widely recognised as a premium aesthetic solution and are highly popular among clients seeking smoother-looking skin and long-term hair reduction.

Treatments are designed to improve the appearance of unwanted hair growth with minimal downtime, making them suitable for a wide range of clients.

808 Diode Laser

Treatment Possibilities

The Diode Laser SLD 808 system supports a wide range of professional hair reduction treatments for both face and body areas.

Treatment applications may include:

- Reduction of unwanted facial and body hair
- Maintenance hair reduction programmes
- Treatment of different hair thickness levels
- Large area treatments such as legs, back or arms
- Targeted treatments for smaller or sensitive areas
- Support for smoother skin appearance
- Reduction in the appearance of ingrown hairs

The system supports personalised treatment planning based on skin tone, hair type and treatment goals.

808 Diode Laser

MEDIKA®

Technologies Inside the Device

SLD Diode Laser Technology – 808 nm

The device uses SLD diode technology delivering controlled light energy at 808 nm, designed to support effective hair reduction treatments.

The system allows full adjustment of treatment parameters including energy level, pulse time, frequency and cooling intensity, enabling customised treatment protocols.

Integrated cooling technology supports client comfort during treatments and helps maintain skin protection. SLD technology combines diode laser and LED characteristics, supporting long-lasting device performance and consistent treatment delivery.

808 Diode Laser

MEDIKA®

Treatment Results / Indications

The Diode Laser SLD 808 system supports practitioners in improving the appearance of unwanted hair growth using personalised treatment protocols.

Suitable for clients concerned with:

- Unwanted facial or body hair
- Frequent shaving or waxing
- Skin irritation related to traditional hair removal methods
- The appearance of ingrown hairs
- Clients seeking long-term smooth skin appearance

Treatments are designed to support gradual reduction in visible hair growth while improving overall skin comfort and appearance. Visible improvement typically develops gradually over a recommended course of sessions aligned with the natural hair growth cycle.

These treatments are highly popular among clients seeking convenient and low-maintenance hair reduction solutions.

808 Diode Laser

Contraindications & Safety

Diode Laser SLD 808 treatments are cosmetic treatments designed for professional use and require full client consultation prior to each procedure.

Treatments may not be suitable for clients with:

- Pregnancy
- Active skin infections or inflammation
- Open wounds or damaged skin
- Severe skin sensitivity
- Certain medications affecting skin sensitivity
- Recently tanned skin

A full consultation and patch test should always be completed prior to treatment.
Final treatment suitability should be assessed by a trained practitioner.

808 Diode Laser

Technical Specification

The Diode Laser SLD 808 system is designed for professional aesthetic environments, combining reliable performance with intuitive operation.

Key features include:

- Wavelength: 808 nm
- Energy density: 2 – 125 J/cm²
- Pulse time: 10 ms – 500 ms
- Pulse frequency: 1 – 10 MHz
- Treatment spot size: 12 mm x 12 mm
- Touchscreen interface: 9.7"
- Cooling system: air and semiconductor cooling
- Dimensions: 105 x 37 x 44 cm
- Weight: 40 kg
- Manufacturer warranty: 12 months

The device includes ready treatment programmes supporting efficient and consistent treatment planning.

MEDIKA®

Business Benefits *

Market Demand & Positioning

- High-demand laser hair reduction treatment
- Strong client demand for long-term smooth skin solutions
- Premium treatment positioning within aesthetic service portfolios
- Helps attract new clients seeking advanced hair reduction treatments

Treatment Versatility & Service Expansion

- Suitable for multiple face and body treatment areas
- Supports treatment for different hair thickness levels
- Encourages repeat client treatment programmes
- Suitable for both female and male clients
- Efficient treatment time supporting high client turnover

Profitability & Return on Investment

- Strong income potential per treatment
- High profit margin treatment
- Low consumable cost
- Supports package treatment sales
- Potential return on investment based on treatment pricing and business model

808 Diode Laser

MEDIKA®

Profitability & Return on Investment ROI

Hydrogen Peel is positioned as a premium glow treatment within the UK aesthetic market.

Average UK treatment price: £130–£150

Based on an average price of £140:

- 43 treatments to recover £6,000 investment
- Equivalent to approx. 2 months at 5–6 clients per week

High profit margin per treatment with low consumable cost.

Strong potential for recurring income through treatment courses and maintenance programmes.

808 Diode Laser

MEDIKA®

Why Beauty Professionals Choose Diode Laser SLD 808

- Popular non-invasive hair reduction technology
- Supports long-term smooth skin appearance
- Comfortable treatment experience supported by cooling technology
- Large treatment spot supports faster procedures
- Premium and modern treatment addition to aesthetic service portfolios
- Supports long-term client retention and maintenance programmes

Diode laser technology is widely recognised as one of the leading solutions supporting long-term hair reduction treatments.

MEDIKA®

Trio SLD Laser

The TRIO LASER SLD system is an advanced, non-invasive laser hair reduction technology designed to support long-term reduction of unwanted hair while maintaining skin comfort.

The device combines three wavelengths (755 nm + 808 nm + 1064 nm), allowing versatile treatment options across different skin tones and hair characteristics.

TRIO LASER SLD treatments are a premium, high-demand service for clients who want smoother-looking skin and a low-maintenance hair removal routine, with minimal downtime.

Trio SLD Laser

MEDIKA®

Treatment Possibilities

The TRIO LASER SLD system supports professional hair reduction treatments for both face and body areas.

Treatment applications may include:

- Long-term hair reduction for face and body
- Large-area treatments (legs, back, full arms)
- Targeted treatments for smaller/sensitive areas (upper lip, underarms, bikini)
- Support for smoother-looking skin appearance
- Reduction in the appearance of ingrown hairs
- Maintenance hair reduction programmes

Treatments are planned individually based on skin tone, hair type and client goals.

Trio SLD Laser

MEDIKA®

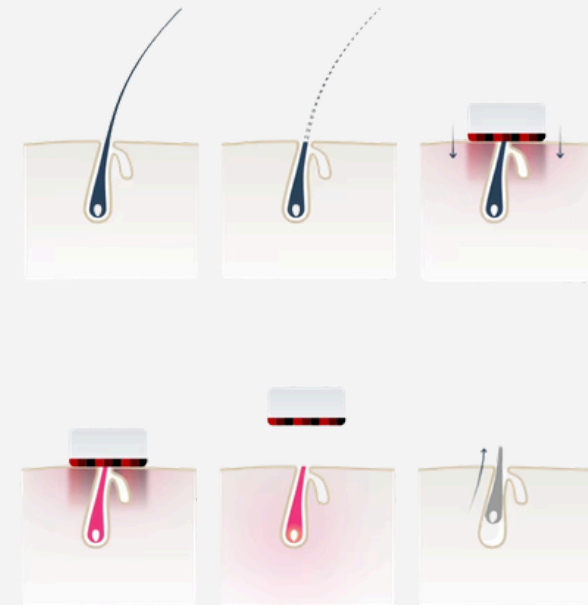

Technologies Inside the Device

Triple Wavelength SLD Technology (755 nm + 808 nm + 1064 nm)

The device uses a unique combination of three wavelengths (755 nm + 808 nm + 1064 nm) delivered through one treatment head, supporting versatile treatment options for different hair depths and skin tones.

The SLD emitter technology is designed to support long-lasting performance and consistent energy delivery during treatments.

An automatic cooling system supports client comfort during treatments and helps maintain skin protection.

Radiofrequency microneedle

INTRODUCING THE MEDIKA RF MICRONEEDLING SYSTEM

The MEDIKA RF Microneedling System is a professional skin rejuvenation device designed to improve skin firmness, texture and overall appearance using advanced radiofrequency technology combined with microneedling.

By combining tiny insulated needles with controlled radiofrequency energy, the system stimulates the skin's natural renewal process while helping improve skin quality with minimal downtime.

Suitable for the face, neck, décolleté and body, the MEDIKA RF Microneedling System is an excellent addition to aesthetic clinics, beauty salons and medical aesthetic practices looking to expand their treatment portfolio with one of today's most requested skin rejuvenation technologies.

The system includes both microneedling RF and non-invasive RF handpieces, allowing practitioners to perform a wide variety of skin tightening and skin improvement treatments.

Radiofrequency microneedle

MEDIKA®

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA RF Microneedling System supports a wide range of professional face and body treatment.

Treatment protocols should always be tailored to the individual client's needs and professional assessment.

Treatment applications may include:

- Skin tightening treatments
- Skin rejuvenation programmes
- Wrinkle reduction treatments
- Acne scar improvement
- Scar appearance improvement
- Stretch mark treatments
- Skin texture improvement
- Skin tone improvement
- Pore appearance reduction
- Skin firming treatments
- Face lifting procedures
- Neck and décolleté rejuvenation
- Body skin tightening
- Eye area rejuvenation
- Non-invasive radiofrequency skin tightening

Radiofrequency microneedle

MEDIKA®

Technologies Inside the Device

Advanced RF Microneedling Technology

The MEDIKA RF Microneedling System combines insulated microneedles with controlled radiofrequency energy to stimulate the skin's natural renewal process while helping improve firmness, texture and overall skin quality.

RF Microneedling Technology

Tiny insulated needles deliver radiofrequency energy directly into the deeper layers of the skin, helping stimulate collagen production while minimising heat on the skin surface.

Non-Invasive RF Technology

The additional SRF handpiece provides comfortable skin tightening treatments without needles, making the device suitable for clients looking for non-invasive skin rejuvenation.

Adjustable Needle Depth

Needle depth can be adjusted from 0.3 mm to 3 mm, allowing treatments to be customised for different treatment areas and individual skin concerns.

Multiple Treatment Tips

The device includes 25-pin, 49-pin and 81-pin cartridges, giving practitioners flexibility for treating both delicate and larger treatment areas.

Professional Touchscreen Interface

An intuitive 8-inch touchscreen provides quick access to treatment settings, making the system simple to use in busy clinics and beauty salons.

Radiofrequency microneedle

MEDIKA®

Treatment Results / Indications

The MEDIKA RF Microneedling System is suitable for clients seeking professional skin rejuvenation and skin tightening treatments.

Suitable for clients concerned with:

- Fine lines and wrinkles
- Loss of skin firmness
- Reduced skin elasticity
- Acne scars
- Surgical scars
- Stretch marks
- Uneven skin texture
- Enlarged pores
- Dull-looking skin
- Mild skin laxity
- Face and neck rejuvenation
- Body skin tightening

Visible improvements usually develop progressively throughout a recommended course of treatments as the skin naturally renews itself. Individual results may vary depending on skin condition, lifestyle and treatment plan.

Radiofrequency microneedle

MEDIKA®

Contraindications & Safety

The MEDIKA RF Microneedling System is intended for professional use following a full client consultation.

Treatment may not be suitable for clients with:

- Pregnancy or breastfeeding
- Pacemakers or implanted electronic devices
- Metal implants in the treatment area
- Active skin infections
- Active acne flare-ups
- Poor wound healing
- Blood clotting disorders
- Use of blood-thinning medication
- Active cancer or recent cancer treatment
- Uncontrolled high blood pressure
- Fresh tattoos in the treatment area
- Certain prescription medications affecting the skin

A full consultation should always be completed before treatment to determine individual suitability.

Final treatment suitability should always be assessed by a qualified practitioner.

Radiofrequency microneedle

MEDIKA®

Technical Specification

The MEDIKA RF Microneedling System combines advanced radiofrequency technology with adjustable microneedling to deliver reliable, comfortable and highly effective skin rejuvenation treatments.

Key Features

- Professional RF Microneedling System
- Invasive RF Microneedling handpiece
- Non-invasive RF handpiece (SRF)
- Adjustable needle depth (0.3–3.0 mm)
- 25-pin, 49-pin and 81-pin cartridges

MEDIKA®

Business Benefits *

Expand Your Body Rejuvenation Portfolio

The MEDIKA RF Microneedling System allows clinics and beauty salons to offer one of today's most popular advanced skin rejuvenation treatments.

High-Demand Treatment

RF Microneedling is one of the most requested skin treatments, helping clinics attract new clients looking for visible skin improvement without surgery.

Increase Client Retention

Most clients achieve the best results through a course of treatments, encouraging repeat appointments and long-term client relationships.

Suitable for Face & Body

One device can be used for multiple treatment areas, allowing clinics to expand their treatment menu without investing in several separate machines.

Premium Treatment Pricing

RF Microneedling is considered a premium aesthetic treatment, helping clinics increase revenue while offering high-value services.

Easy Everyday Operation

Preset treatment programmes, adjustable settings and an intuitive touchscreen make the device simple to use for trained practitioners.

Radiofrequency microneedle

The MEDIKA RF Microneedling System enables clinics to introduce one of the most sought-after skin rejuvenation treatments, helping improve client satisfaction, increase repeat bookings and expand business opportunities through advanced, non-surgical skin treatments.

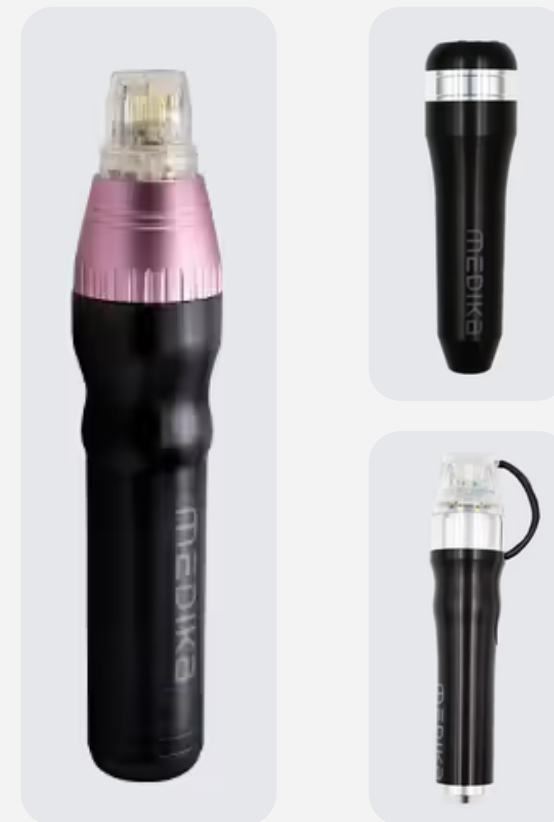

MEDIKA TRIO Age RF

INTRODUCING THE MEDIKA TRIO AGE RF

The **MEDIKA TRIO Age RF** is an advanced radiofrequency platform designed to deliver professional skin rejuvenation, skin tightening and body contouring treatments using three complementary RF technologies within one versatile system.

Combining fractional microneedling radiofrequency (RFrax), vacuum-assisted fractional RF and non-invasive bipolar radiofrequency (SRF), the system enables practitioners to create highly personalised treatment protocols for both face and body.

Designed for aesthetic clinics, medical aesthetic practices and advanced beauty salons, the MEDIKA TRIO Age RF supports a wide range of non-surgical skin rejuvenation treatments while offering exceptional treatment flexibility and client comfort.

MEDIKA TRIO Age RF

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA TRIO Age RF supports a comprehensive range of professional face and body treatments.

Treatment applications may include:

- Fractional RF skin rejuvenation
- Facial skin tightening
- Neck and décolleté rejuvenation
- Non-surgical skin lifting
- Body skin tightening
- Treatments supporting the appearance of acne scars
- Treatments supporting the appearance of stretch marks
- Treatments supporting smoother skin texture
- Treatments supporting skin firmness and elasticity
- Body contouring programmes
- Treatments supporting the appearance of cellulite
- Maintenance anti-ageing programmes

Every treatment protocol can be tailored according to the client's skin condition, treatment objectives and practitioner assessment.

MEDIKA®

MEDIKA TRIO Age RF

mEDIKA®

Technologies Inside the Device

Three Advanced Radiofrequency Technologies in One Platform

The MEDIKA TRIO Age RF combines three complementary radiofrequency technologies, allowing practitioners to perform both invasive and non-invasive treatments using a single professional platform.

RFrax Fractional Microneedling Radiofrequency

The RFrax handpiece combines precision microneedling with controlled radiofrequency energy.

Insulated microneedles deliver radiofrequency energy directly into targeted skin layers, stimulating the skin's natural regeneration processes while supporting collagen and elastin remodelling.

The system features adjustable needle depth and interchangeable sterile cartridges with 25, 49 or 81 pins, allowing treatments to be customised for different treatment areas and skin concerns.

RFrax Vacuum Technology

The vacuum-assisted RFrax handpiece combines fractional radiofrequency with controlled vacuum technology, helping improve tissue contact and treatment precision while enhancing practitioner control during selected procedures.

MEDIKA TRIO Age RF

MEDIKA®

Technologies Inside the Device

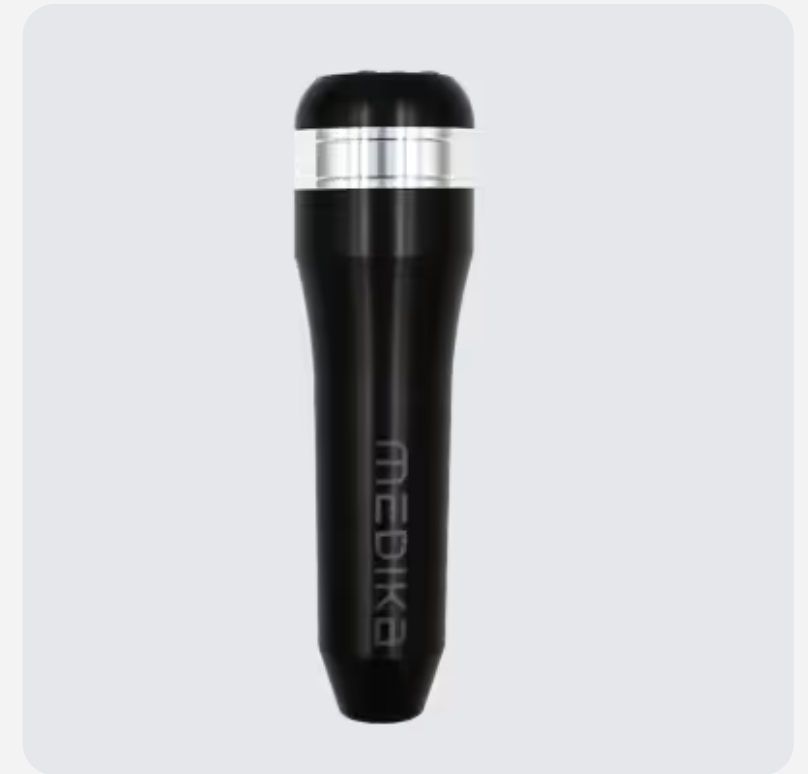

SRF Bipolar Radiofrequency

The non-invasive SRF handpiece delivers controlled bipolar radiofrequency energy without the use of needles.

The gentle heating of the dermis supports collagen remodelling while providing a comfortable treatment option for clients who prefer non-invasive skin tightening procedures.

Intelligent Radiofrequency Modulation

An advanced radiofrequency modulation system allows practitioners to adjust treatment parameters according to skin condition, treatment area and desired clinical outcomes, providing exceptional flexibility across a wide variety of aesthetic procedures.

MEDIKA TRIO Age RF

MEDIKA®

Treatment Results / Indications

The MEDIKA TRIO Age RF supports practitioners in treating multiple aesthetic skin concerns through customised treatment protocols.

Suitable for clients concerned with:

- Loss of skin firmness
- Fine lines and wrinkles
- Uneven skin texture
- Enlarged pores
- Acne scars
- Stretch marks
- Reduced skin elasticity
- Mild skin laxity
- Body contouring support
- The appearance of cellulite
- Skin requiring rejuvenation and collagen stimulation

Visible improvements typically develop progressively throughout a recommended course of treatments, with collagen remodelling continuing over several weeks following treatment.

Individual results may vary depending on skin condition, treatment protocol and adherence to aftercare recommendations.

MEDIKA TRIO Age RF

MEDIKA®

Contraindications & Safety

The MEDIKA TRIO Age RF is intended for professional use by qualified practitioners following a full client consultation.

Treatments may not be suitable for clients with:

- Pregnancy
- Active skin infections or inflammation
- Open wounds
- Implanted electronic medical devices (including pacemakers)
- Active malignant disease
- Severe autoimmune disorders affecting the skin
- Poor wound healing
- Certain medications affecting skin healing
- Recent aesthetic procedures requiring recovery time

Final treatment suitability should always be assessed by a qualified practitioner.

A full consultation and treatment assessment should always be completed before every procedure.

Thermcell

MEDIKA®

INTRODUCING THE MEDIKA THERMCELL

The MEDIKA ThermCell is a professional thermolysis system designed to help improve the appearance of visible thread veins, broken capillaries and various minor skin imperfections.

Using high-frequency thermolysis technology, the device delivers precise energy through a fine treatment probe to target small treatment areas with accuracy and comfort.

The treatment is quick, minimally invasive and suitable for use throughout the year. The MEDIKA ThermCell is an excellent addition to aesthetic clinics and beauty salons looking to expand their treatment portfolio with professional skin correction procedures.

Suitable as both a standalone treatment and as part of comprehensive skin improvement programmes, the MEDIKA ThermCell delivers precise treatments while supporting excellent cosmetic results.

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA ThermCell supports a wide range of professional skin correction treatments.

Treatment applications may include:

- Reduction of the appearance of broken capillaries
- Reduction of visible thread veins
- Treatment of spider veins
- Removal of skin tags
- Removal of small fibromas
- Wart treatments
- Individual unwanted hair removal
- Cosmetic skin correction procedures

Treatment protocols should always be tailored to the individual client's needs and professional assessment.

Thermcell

MEDIKA®

Technologies Inside the Device

The MEDIKA ThermCell uses high-frequency thermolysis technology to deliver precise energy directly to the treatment area.

The controlled heat helps treat targeted skin imperfections while minimising discomfort and supporting a quick recovery.

Thermolysis Technology

High-frequency energy precisely targets small treatment areas, making treatments accurate, efficient and comfortable.

Professional Touchscreen Interface

The intuitive touchscreen interface provides quick access to treatment settings, helping practitioners work efficiently and confidently.

Three Treatment Modes

The device combines three professional technologies:

- Thermolysis
- Electrolysis
- Blend Mode

This allows practitioners to select the most suitable treatment method for different skin concerns.

Adjustable Treatment Parameters

Treatment intensity, pulse duration and working mode can all be adjusted, allowing every procedure to be tailored to the client's individual needs.

Thermcell

Treatment Results / Indications

The MEDIKA ThermCell is suitable for clients seeking professional treatment for small visible skin imperfections.

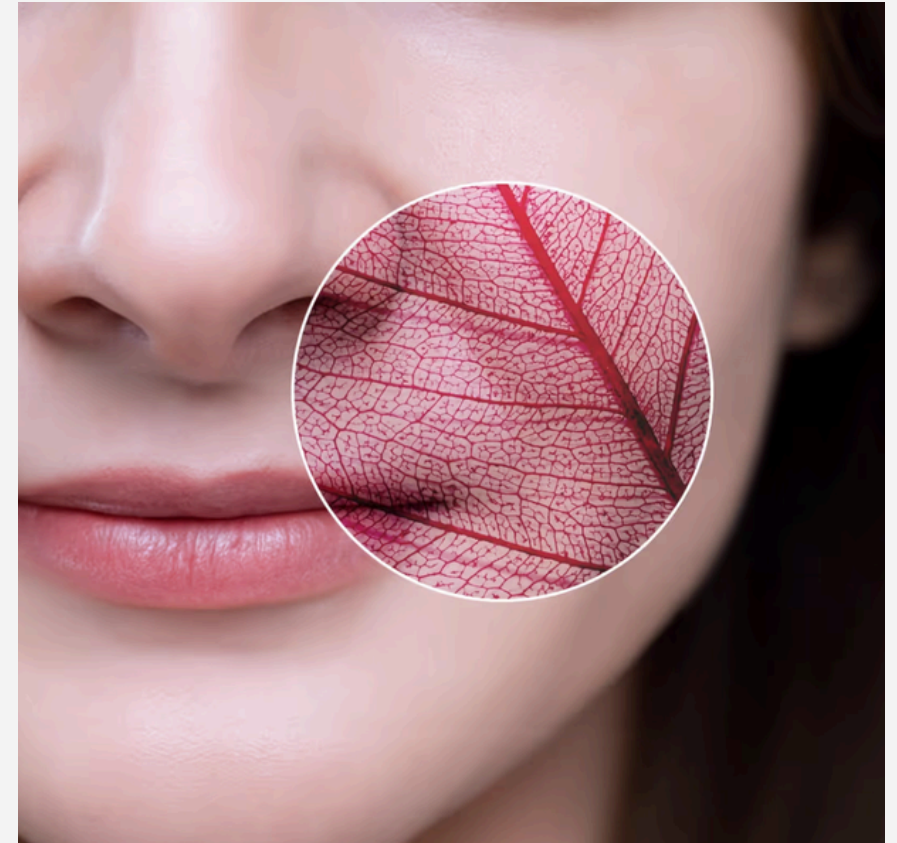

Suitable for clients concerned with:

- Broken capillaries
- Thread veins
- Spider veins
- Small fibromas
- Skin tags
- Warts
- Individual unwanted hairs
- Minor cosmetic skin imperfections

Most clients notice visible improvement immediately or progressively as the skin naturally heals.

Individual results may vary depending on the treatment area and the client's skin condition.

MEDIKA®

Contraindications & Safety

The MEDIKA ThermCell is intended for professional use following a full client consultation.

Treatment may not be suitable for clients with:

- Pregnancy
- Active skin infections
- Active inflammatory skin conditions
- Skin cancer
- Autoimmune disorders affecting skin healing
- Uncontrolled diabetes
- Conditions affecting wound healing
- Active herpes infection

A full consultation should always be completed before treatment to determine individual suitability.

Final treatment suitability should always be assessed by a qualified practitioner.

Thermcell

- Manufacturer Warranty: 12 Months

Thermcell

MEDIKA®

Business Benefits *

Expand Your Skin Treatment Portfolio

The MEDIKA ThermCell enables clinics and beauty salons to introduce highly requested treatments for broken capillaries, thread veins and minor skin imperfections using one compact device.

Offer High-Demand Treatments

Many clients are looking for fast, precise solutions for small visible skin concerns, making ThermCell an excellent addition to existing treatment menus.

Increase Client Retention

Many clients return for follow-up appointments or treatment of different areas, helping build long-term client relationships.

Add High-Value Services

ThermCell treatments require minimal preparation and can easily fit into a busy clinic schedule, creating additional revenue opportunities.

Comfortable Treatment Experience

The precise treatment probe allows practitioners to work accurately while keeping client discomfort to a minimum.

Easy Everyday Operation

The touchscreen interface and adjustable treatment settings make the system simple to learn and efficient to use in everyday practice.

Thermcell

MEDIKA®

MEDIKA Plasma ARC

INTRODUCING THE MEDIKA PLASMA ARC

The MEDIKA Plasma ARC is a professional aesthetic device using controlled plasma technology for precise, non-surgical skin treatments.

The device generates a targeted plasma arc through the ionisation of gases naturally present in the air. Controlled energy is applied precisely to selected areas of the skin, supporting skin tightening and improving its overall appearance.

Its compact design, touchscreen interface and adjustable treatment parameters make Plasma ARC suitable for professional beauty and aesthetic practices.

MEDIKA Plasma ARC

MEDIKA®

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA Plasma ARC can be used for professional aesthetic treatments including:

- Non-surgical eyelid tightening
- Improving the appearance of loose skin around the eye area
- Improving the appearance of fine lines and wrinkles
- Lines around the eyes and mouth
- Lower-face skin tightening
- Improving skin texture and firmness
- Cosmetic treatment of selected superficial skin imperfections*

**Treatment suitability and permitted applications depend on the practitioner's qualifications, insurance and applicable local requirements.*

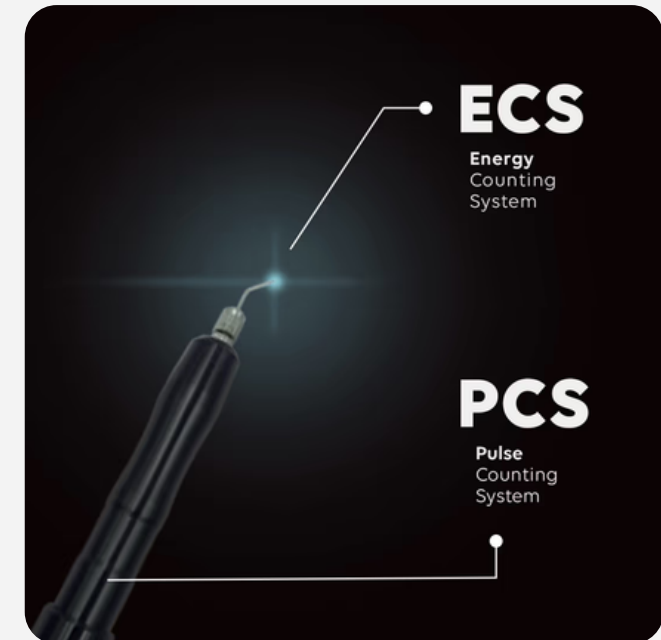

MEDIKA Plasma ARC

MEDIKA®

Technologies Inside the Device

- Controlled Plasma ARC technology
- ECS Energy Counting System
- PCS Pulse Counting System
- P&E Control System for smooth adjustment of plasma arc power and energy
- DCS Dose Control System for precise energy dosing
- Three pre-set treatment programmes
- Adjustable manual mode
- Touchscreen control
- Adjustable electrode angle for precise treatment

MEDIKA Plasma ARC

mEDIKA®

Carboxytherapy

INTRODUCING THE MEDIKA CARBOXYTHERAPY

The MEDIKA Carboxytherapy System is a professional device designed to support a wide range of face, body and scalp treatments using controlled medical CO₂.

The system combines advanced technology with simple operation, allowing beauty and aesthetic professionals to perform comfortable, non-invasive treatments tailored to individual client needs.

Suitable for aesthetic clinics, beauty salons and wellness centres, the MEDIKA Carboxytherapy System is an excellent addition for businesses looking to expand their treatment portfolio with a versatile and highly popular treatment.

MEDIKA®

Carboxytherapy

MEDIKA®

Treatment Possibilities / What Treatments Can Be Performed

The MEDIKA Carboxytherapy System supports a wide range of professional face, body and scalp treatments.

Treatment applications may include:

- Skin rejuvenation treatments
- Skin firming programmes
- Dark under-eye circle treatments
- Treatments supporting the appearance of stretch marks
- Scar improvement treatments
- Cellulite treatments
- Body contouring support
- Localised fat reduction programmes
- Scalp and hair support treatments
- Skin revitalisation treatments
- Complementary treatments combined with other aesthetic procedures

Treatment protocols should always be tailored to the individual client's needs and professional assessment.

Carboxytherapy

MEDIKA®

Technologies Inside the Device

Advanced CO₂ Therapy Technology

The MEDIKA Carboxytherapy System delivers controlled medical CO₂ through an advanced delivery system designed to provide safe, comfortable and consistent treatments.

The device allows practitioners to adjust treatment settings according to the treatment area and client needs while maintaining smooth and reliable performance.

Intelligent CO₂ Delivery

The system precisely controls gas flow, dosage and treatment temperature, helping practitioners perform treatments with confidence.

Preset Treatment Programmes

Built-in treatment programmes simplify everyday operation while helping practitioners deliver consistent treatments.

Professional Touchscreen Interface

The large colour touchscreen provides quick access to all treatment settings, making the system easy to use in busy clinical environments.

Automatic & Manual Operating Modes

Choose between ready-to-use treatment programmes or customise treatment parameters for greater flexibility.

Carboxytherapy

MEDIKA®

Treatment Results / Indications

The MEDIKA Carboxytherapy System is suitable for clients looking for professional, non-invasive treatments to improve the appearance of the skin, body and scalp.

Suitable for clients concerned with:

- Loss of skin firmness
- Fine lines and tired-looking skin
- Dark circles under the eyes
- Stretch marks
- Scars
- The appearance of cellulite
- Localised fat deposits
- Hair thinning
- Reduced skin quality
- Overall skin revitalisation

Visible improvements typically develop progressively throughout a recommended course of treatments. Individual results may vary depending on lifestyle, treatment frequency and adherence to professional recommendations.

Carboxytherapy

MEDIKA®

Contraindications & Safety

The MEDIKA Carboxytherapy System is intended for professional use following a full client consultation.

Treatment may not be suitable for clients with:

- Pregnancy
- Active skin infections
- Fever or acute illness
- Active cancer
- Severe heart conditions
- Uncontrolled hypertension
- Serious respiratory disorders
- Blood clotting disorders
- Recent heart attack or stroke
- Active inflammatory conditions in the treatment area

A full consultation should always be completed before treatment to determine individual suitability.

Final treatment suitability should always be assessed by a qualified practitioner.

Carboxytherapy

- Manufacturer Warranty: 12 Months

Carboxytherapy

MEDIKA®

Business Benefits *

Expand Your Treatment Portfolio

The MEDIKA Carboxytherapy System enables clinics and beauty salons to introduce one of the most popular non-invasive aesthetic treatments for the face, body and scalp.

Complement Existing Treatments

Carboxytherapy works perfectly alongside skin rejuvenation, microneedling, RF, body contouring and scalp treatments, allowing clinics to create premium treatment packages.

Increase Client Retention

Most carboxytherapy treatments are recommended as a course of sessions, encouraging repeat appointments and supporting long-term client relationships.

Create Premium Treatment Packages

The system can be combined with many other aesthetic procedures, helping increase treatment value while expanding your clinic's service offering.

Comfortable Client Experience

Fast treatment times, adjustable settings and personalised treatment protocols help create a comfortable experience for both practitioners and clients.

Efficient Everyday Operation

Preset treatment programmes and an intuitive touchscreen interface make the device simple to operate, helping practitioners deliver consistent treatments with confidence.
