ABOUT THE PROJECT

Bots4Business supports small and medium-sized enterprises in understanding and applying Artificial Intelligence in a practical and responsible way.

By connecting VET professionals, business organisations and technology experts, the project is developing training materials and tools that help SMEs strengthen their digital skills, improve business processes and prepare for the future of work.

FROM TRAINING TO LOCAL TESTING

Bots4Business has entered an important implementation phase.

Following the transnational training event held in France in May, project partners are now testing the WP3 training modules with VET professionals in Austria, Croatia, France, Ireland, Italy and Spain.

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Project number : 2024-1-AT01-KA220-VET-000245796

PROJECT PARTNERS

- BFI Burgenland (Austria)
- Future in Perspective (Ireland)
 - Callidus (Croatia)
 - Postal3 (Spain)
- Confimi Industria Basilicata (Italy)
- Infinitivity Design Labs (France)

Co-funded by
the European Union

The local activities will help participants explore the modules, use the practical tools and assess how the materials can be applied in real training and business-support environments.

TRANSNATIONAL TRAINING EVENT IN FRANCE

In May, Bots4Business partners met in France for a practical transnational training event hosted by Infinitivity Design Labs.

Participants explored the project's learning platform and worked with the WP3 CPD modules through presentations, demonstrations and hands-on activities.

The event also provided an opportunity to exchange experiences, discuss different national contexts and prepare partners for the upcoming local testing activities.

LOCAL TESTING OF THE WP3 MODULES

Partners are now delivering the WP3 CPD programme to VET trainers and educators in their countries.

The modules introduce practical approaches to AI fundamentals, business strategy, ethical and responsible AI, digital change management, data analytics and sector-specific applications.

Feedback collected during the local testing phase will support the final preparation of the training programme and confirm its usability in different VET contexts.

WHAT'S NEXT?

In the coming months, partners will:

- complete the local testing activities;
- collect feedback from VET professionals;
- make minor final refinements where needed;
- continue promoting the Bots4Business platform and training resources.

The project will also continue its work on policy recommendations, sustainability and wider engagement with SMEs and VET stakeholders.
