Create custome scent schedules and adjust scent intensity

HOW IT WORKS

The A/C Scenting System Pro works with your HVAC system and will enhance your entire space.

Doctor Aromas transforms the central HVAC into a scenting machine providing a memorable and captivating scent experience. When the perfume goes through the filter, the molecules are invisible. You don't see the fragrance going out! It works with both cooling and heating. Technology that enables the aerosol to spray just the right amount of perfume every time. Our aroma refill product line allows us to provide you with a unique scenting program tailored to your needs with the ability to make changes to the fragrance as desired.

A photograph of a modern elevator interior. The walls are covered in large, rectangular panels with a light grey, stone-like texture. A horizontal stainless steel handrail is mounted across the middle. On the right wall, there is a control panel with a grid of circular buttons numbered 1 through 17. Above the buttons is a small digital display showing '630 kg 8 PERS'. The ceiling features a series of parallel, illuminated rectangular diffusers. The floor is dark and reflective.
