

Trusted Phenotypic Microbiology — Made Simple and Reliable

Forover 50 years,RoscoDiagnostica has provided laboratories worldwide with high-quality diagnostic tools for bacterial and fungal identification and antibiotic susceptibility testing. From our base in Denmark, we combine Scandinavian quality standards with global reach, supporting hospitals, research centers, pharmaceutical companies and diagnostic laboratories in over 70 countries.

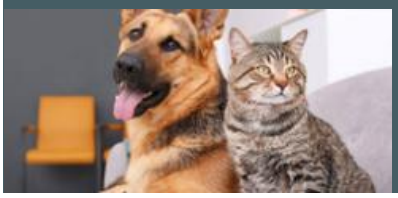

Rosco
Diagnostica

OUR DIAGNOSTIC FOCUS

We supply unique diagnostic products for testing of human samples, veterinary (pets, livestock etc.) and specialized areas such as water quality

Today, Rosco is part of Alpine-Bio Group, a life science company focused on microbiological diagnostics and antibiotic resistance testing. Together, we bring innovation, quality, flexibility, and manufacturing excellence to partners worldwide.

Why Customers Choose Rosco Diagnostica

Quality & Consistency:
ISO 13485–certified production ensures reliable batch performance.

Phenotypic Expertise:
Deep specialization in manual and semi-automated phenotypic methods — from ID to AST to resistance mechanism detection.

Ease of Use & Logistics:
Dry-format (Crystalline) tablets with a long shelf life — no refrigeration required, in storage or during use.

Comprehensive Portfolio:
CE-marked, EUCAST/CLSI-validated solutions covering the full diagnostic workflow.

Nordic Reliability:
Fast delivery, responsive technical support, and long-term supply stability.

Product Families & Key Differentiators

Neo-Sensitabs™ — Antibiotic Susceptibility Testing

Rosco's flagship AST tablets are used globally for standardized disk diffusion testing.
Features include pre-calibrated (EUCAST/US CLSI) antibiotic concentrations, long shelf life, and a broad range of antibiotics — including critical and novel agents. These tablets complement both manual and automated systems, making them ideal for confirmatory and reference testing.

Diatabs™ — Bacterial & Fungal Identification

Convenient, dry-format tablets for biochemical and enzymatic identification of bacteria and yeasts.
Features include easy-to-read color reactions, stability in tropical climates, and full ID coverage for Enterobacteriaceae, Gram-positive bacteria, and yeasts — enabling reliable identification without expensive instruments.

Resistance Mechanism Detection Kits

Phenotypic tests for detecting ESBL, AmpC, carbapenemase, MRSA, and other resistance mechanisms.
These kits are aligned with EUCAST and CLSI recommendations and trusted by reference labs globally, offering high-margin niche products for distributors.

"We make high-quality microbiology accessible to every lab — anywhere in the world."

BENEFITS & ABOUT

Partner Benefits for Distributors

- Exclusive territorial representation opportunities
- Strong technical and marketing support
- Reliable long-term manufacturing and supply
- Products with global recognition and clinical credibility

About Rosco Diagnostica

Founded in Denmark in 1964, Rosco Diagnostica has built a global reputation for accuracy, stability, and ease of use in microbiological diagnostics. As part of the Alpine-Bio Group, Rosco continues to expand its phenotypic diagnostic portfolio with a focus on antimicrobial resistance — supporting laboratories and distributors committed to better infection control and public health.

In 2026, we are building a new manufacturing unit to cater for worldwide supply, and scalability to new markets, new developments and offering a broader and complementing product portfolio to our customers.
