# PRINTABLE FABRICS PUT GOLF SHIRTS ON THE FAIRWAY

A bold, printed pattern on a fresh-looking golf shirt or windshirt is a sunny weather mainstay. If customers want to stay on-trend and wear what the pros are wearing, GOLF.com's trendwatchers say repeat patterns like micro-stripe, checkerboard, houndstooth, and plaid are big, as are microprints. In other words, golf apparel makers need to find a perfectly printable fabric that can also meet the demands of the links. TVF can help...

**Golf shirts/polo shirts:**

3.5 oz. Polyester Spitfire

4.3 oz. Polyester Microfiber Flatback Mesh

4.1 oz. Polyester Stealth

5.6 oz. Polyester Heavy Stealth

4.1 oz. Polyester Microfiber Light T-Shirt Jersey

4.3 oz. REPREVE Polyester Microfiber Flatback Mesh

6.3 oz. Polyester Microfiber Heavy Birdseye Flatback Mesh

# THE FABRIC THAT MAKES MOVIE MAGIC

Under the bright lights of Hollywood sound stages, where the cameras don't miss a single detail, textile printing precision counts. The lightning-quick pace of the motion picture industry's creative cycles are also unforgiving, so answering Tinseltown's call when apparel, costuming, or other accessories must be on-set can be daunting. Fortunately, for the millions of critical viewers in theaters, at home, or on mobile devices, digital textile printing studios like Los Angeles-based MY Prints can save the day.

MY Prints Co-Owner Steven Moreno's prints can be seen in movies, TV and streaming shows, music videos, and commercials. "We've done everything from swimsuits to pants to shirts," the 18-year industry veteran says. "We've done shorts, scarves."

Moreno is passionate about his craft – even the challenges that go with it. He says there's a lot of consultation inherent in his work, including finding alternatives for less-forgiving or less-printable materials when designers or stylists ask for a particular look. For example, when a job calls for silk or cotton, he often suggests polyester textiles, which can be printed in a tighter timeline and on the equipment he uses.

"There's always that small education process that comes... especially from new stylists that have only gotten my name from somebody else and then, you know, came in to work on a project. They'll come in and say 'we need silk, we need cotton'..." Moreno recounts "...and immediately, I'll show them some polyester samples."
Two TVF fabrics he'll often start with are 8.4 oz. 88/12 Polyester Lycra ™ Jennifer and Silky Chiffon. "Jennifer... because... one of my biggest things is the matte yarn. And then the Silky Chiffon just feels so flowy. It's so soft, it's so silky, that nine out of 10 people do not believe that it is a polyester fabric when they first touch it."

He continued "that's where I like to leadoff by saying this is a perfect indication that not all polyester feels like the 1970s. You know, disco polyester that you guys may have wrapped in your mind."

Recently, Moreno provided a replica kimono in warp speed for the HBO hit series Euphoria. When the staff contacted him about the job, he jumped at the opportunity. "You know, we just started watching the show. I'm a huge fan. I'd love to be a part of it. Definitely bring down the work," he recalled telling those involved with the show. "So (the staff member) sent her assistant out and she dropped off this beautiful purple kimono and I said, 'OK, this is pretty cool. What is it that you need me to do?'"

The work involved scanning the artwork of the original and printing up two replica samples for a stunt double. The catch? They wanted it by 5 o'clock the next morning. The bigger catch? It was already 5 o'clock in the evening.

**"...NOT ALL POLYESTER FEELS LIKE THE 1970S. YOU KNOW, DISCO POLYESTER THAT YOU GUYS MAY HAVE WRAPPED IN YOUR MIND."**

After working through the night and coordinating the sewing assembly, Moreno's story has a happy ending. "She texted me at about 10:30 and she said the filming just finished and it was awesome... I remember I was at home, shaking my head and going, 'I can't believe I just worked straight through the night just for a kimono to put on the screen,'" he chuckled. "And when we saw the episode, I mean, if I counted on my fingers, I don't even think I would have got two fingers up in the air. That's how quick it went through the screen."

Moreno's optimism and passion for his craft won out, even with a deadline that would be impossible for a lot of other print studios. "For me, the fun is the challenge. You know, trying to figure it out."

In addition to Jennifer and Silky Chiffon, TVF offers dozens of printable apparel fabrics that meet the needs of your specific application. Chat with our team of knowledgeable experts.

# DISPLAY FABRIC

Explore high-quality polyester and cotton display fabrics in an array of texture options with matte and lustrous finishes for indoor and outdoor print media applications. We carry smooth, flame-retardant polyester display fabrics with color-enhancing coatings for latex ink compatibility. Knitted canvas display fabrics are UV-resistant and strong, perfect for long-lasting window displays and sporting event banners. Contact us today to learn more about the display fabric solutions we can provide for you.

CASE STUDY: LARGE FORMAT SOLUTIONS

# TVF TEAMS UP WITH WORLD-RENOWNED LARGE FORMAT PRINTING COMPANY

The United States headquarters of a world-renowned large format printing company prides itself on perfection. Their signatures are rapid turnaround times, ultra-tight tolerances, and a guarantee that the printed materials customers receive will fit their Silicone Edge Graphics (SEG) frames. The company reached out to TVF when its stock of 7255BBFS Blackback Stretch from Georg + Otto Friedrich GmbH (G+O Friedrich) ran low. This case study will discuss why they partnered with TVF as a supplier for this material, detail why the 7255BBFS Blackback Stretch fits the needs of the printer, and run through technical details of the textile.

## Backstory of a partnership

Based in Chicago and launched in 2020, this operations base is one of eight locations of a larger, European-based parent company. The parent was founded in 1990 and has grown to include 220 employees, print 50 million square-feet of textiles per year, and sell some 300 tons of aluminum extrusions. Its operations include more than 1,200 Durst printing presses.

The company previously imported 7255BBFS Blackback Stretch via container shipment directly from G+O Friedrich in Germany. A project emerged that needed the material more quickly and another customer recommended he talk with TVF because of its proximity to Chicago (TVF is headquartered in central Indiana) and on-hand fabric supplies. At the time, TVF did not stock 7255BBFS Blackback Stretch, but supplied another solution to get them through the work. The connection led TVF to supply 7255BBFS Blackback Stretch for subsequent SEG frame system projects.

## Why G+O Friedrich's 7255BBFS Blackback Stretch supplied by TVF?

7255BBFS Blackback Stretch strikes a balance that other options – which often include a face material for printing and a backing material for opacity – can't. The textile, the customer shared, is better for workflow, less installation time for the customer (only one layer to hang), and it yields overall better results. To put it more simply: "More precision, less weight, less CO2 consumption (during shipping), and less (freight) cost."

Another major reason the company uses 7255BBFS Blackback Stretch and other G+O Friedrich material? Consistency. The company cuts the fabric with CNC machines, prints with dye-sublimation and UV printing methods, sews with specialized equipment, and provides an average turnaround of 24-72 hours, a window that they call "unreached" by others in the U.S. market. The company also works with tolerances of +/- one millimeter, allowing them to guarantee the fabric will fit for SEG frames. These factors mean the company needs a supply partner who can deliver the material quickly and cleanly, have established relationships with the textile maker, and keep enough of the fabric on-hand to respond to near-immediate turn times – all of which TVF handles.

**7255BBFS BLACKBACK STRETCH STRIKES A BALANCE THAT OTHER OPTIONS – WHICH OFTEN INCLUDE A FACE MATERIAL FOR PRINTING AND A BACKING MATERIAL FOR OPACITY – CAN'T.**

## Technical Details of 7255BBFS Blackback Stretch

G+O Friedrich says the 100% polyester 7255BBFS Blackback Stretch is available:

- -in widths of 260 cm, 320 cm, and 505 cm
- -weighs 270 g/m2 (+/- 5%)
- -is air tight, crease resistant, and flame retardant
- -meets STANDARD 100 by OEKO-TEX, product class 2 (direct contact with skin), and certification nr. 93.0.4777 Hohenstein HTTI

# DRAPE FABRIC

Drapes add elegance to any room and textured fabrics, including classic linen and robust canvas, help to create a detailed, high-end aesthetic. CASE STUDY

# TVF: YOUR EQUESTRIAN PRODUCT FABRIC SOLUTION

The responsibilities that accompany horse ownership, showing, riding, and husbandry are almost endless. For those who make the tack and accessories that make the equestrian world run, endless equals opportunity. It also means working with a fabric supplier with knowledge on the rigors of applications involving raising, working with, training, riding, and even showcasing horses.

The primary characteristic equestrian product manufacturers seek is consistency. When they begin to cut, sew, or load fabric rolls for a job, they want confidence that the material they're using performs to their expectation every time. TVF's in-depth relationship with mills, dye houses, and other textile partners ensures the fabric that equestrian product manufacturers create meet expectations each time. Testing is a critical component to consistency, and depending on the fabric selection, TVF employs a variety of testing methods ranging from in-house to at the mill to third-party.

"Customers veer more toward nylon," TVF Senior Sales Consultant Laura Ballard says, noting nylon's strength and resistance to abrasion. She adds that customer preferences have largely remained consistent throughout the years, but says requests for more coordinated colors have been on the rise recently.

## FIVE POPULAR EQUESTRIAN TEXTILES FROM TVF:

Cordura® options such as 1000 Denier CORDURA® Classic (nylon) and CORDURA® HP (polyester) – known for exceedingly high tensile strength; high puncture, tear, and abrasion resistance.

600 Denier Heavy Polyester Duck and 1000 Denier Textured Nylon – both feature clear polyurethane back coatings and durable water-repellent finishes.

1050 Denier High Tenacity Ballistic Nylon and 1050 Denier Ballistic Nylon – fabrics with excellent abrasion resistance and some of the highest tensile strength sold by TVF.

4 oz. Mid-Weight Nylon Taslan – breathable (microporous coating), durable fabric with a water-repellent finish for the outer shell of turnout gear and blankets.

8.5 oz. 94/6 Polyester Spandex Heavy Scuba Deluxe – unique, spongy feel, wicking finish, UPF50 protection, super-durable for riding pants.

In addition to consistency, TVF customers – many of which show horses, board them, or live in Amish communities where they produce their own coats, rain covers, straps, saddle bags, and other gear – decide to purchase based on expertise, weight, and strength. Their purchasing frequency varies from weekly to seasonally, and specialized options are available for services such as custom dyeing for end-uses like horse show season applications.

## FIVE POPULAR PRODUCTS TVF EQUESTRIAN CUSTOMERS PRODUCE:

1. Horse blankets inside the stable or fair weather outside days.
2. Color-coordinated gear, blankets, and covers for show horses and stalls.
3. Coats/rain covers/turnout gear – waterproof breathable layers with a water-repellent shell and softer, insulating interior fabric.
4. Straps and saddle bags.
5. Durable, comfortable pants and other rider clothing.

The fabric characteristics that customers routinely cite include: waterproof, breathable, comfortable hand, abrasion resistant, durable, and easily-sewn. With any textile decision, there are trade-offs to consider like colorfastness to light and abrasion resistance, which lead customers to select between nylon, polyester, cotton, or blended options. Connect with an experienced TVF Sales Team member for your next equestrian fabric purchase.

# PRINT MEDIA FLAG FABRIC

Browse our selection of media flag materials and discover matte and pearlescent textiles engineered for high-resolution, latex ink print graphics. Print-through polyester flag fabrics offer consistent results in color, clarity, and lay. The lightweight construction makes hanging a polyester flag a breeze and allows for bulk-free transport. Select print media flag fabrics come with a liner for easier printing and added stability. Contact us today to learn more about the print media flag fabric solutions we can provide for you.

TVF Inc., a 100% employee-owned fabric supplier, has launched an award-winning gray back fabric for print service providers and manufacturers. PureNight Pro 8668SDWGFS is a 100% recycled polyester blockout designed for sustainability and engineered for direct or transfer printing with dye sublimation inks.

This all-new blockout fabric has received a 2025 Pinnacle Award from PRINTING United Alliance in the Non-Output Media Textile Framing Systems Frontlit category. Produced by the gold standard for digital printing and technical textiles, Georg+Otto Friedrich (G+O) in Germany, and delivered by TVF, PureNight Pro's primary applications include frame systems, trade show displays, event backdrops, window graphics, retail signage, and banners.

Engineered without a polyurethane coating, PureNight Pro provides excellent print coverage and post-use recyclability. Its supremely white surface, crease-resistance, and high impermeability to light, make this vibrant print media substrate stand out for SEG framing system and trade show applications.

"PureNight Pro is a great culmination of market demand and deep collaboration among our team and our mill partners to develop a gray back fabric that strikes the right balance of blocking out on the back side while maintaining a crisp and vivid whitepoint on its printable face," says TVF Vice President of Print Media Sales Jeff Nonte. "This innovative fabric provides our customers with an alternative to coated black back fabrics by providing excellent printability and blockout properties as a 100% sustainable solution."

Cooperative-to-pack, easy-to-fold PureNight Pro is available in widths of up to 122″, and is flame retardant and OEKO-TEX® STANDARD 100 Certified.

CASE STUDY: INDUSTRIAL

# FROM PROTOTYPE TO PRODUCTION: TEXTILE SOLUTIONS FOR MEDICAL DEVICE MAKERS

**CONTRACT MEDICAL** device manufacturers have a knack for balancing scale, compliance, and safety to provide complex solutions. Their products often require components from an array of sources that need to match their level of precision and specification. If these manufacturers use textiles, they demand a supplier who can provide the exact material and have a deep understanding of that materials interplay with the other component parts, the longevity of the application, the demands the production process will exact on the textile, and how the end-user or patient will best interact with the fabric.

TVF, a trusted textile supplier and production partner for more than 50 years, has the expertise, real-world experience, and global supply chain connections to collaborate and deliver for full-device, component, and prototyping medical device manufacturers of small and large scales. TVF can arrange finishes, coatings, and color-matching to meet medical specifications.

"Your research and development (R&D) doesn't have to happen in isolation," says Travis Conlon, TVF Classic & Vinyl Sales Director. "We can work directly with your Product Managers at every step – whether you're testing materials, refining a prototype, or moving into production. Our team brings deep textile knowledge and a collaborative spirit to help you get it right the first time. We're here to support you all the way."

Textile applications in medical devices are becoming more common. Some examples include mattress covers, patient transfer, pressure injury prevention, wheelchair seats, blood pressure cuffs, facility curtains (disposable and reusable), filtration components, and more.

Examples of textiles suitable for medical device uses carried in-stock by TVF include:

70 Denier Nylon Taffeta – smooth and versatile for applications like surgical drapes, isolation gowns, sterile equipment covers, patient transfer, pressure injury prevention devices and more – available uncoated, coated, high count, and PVC backed.

200 Denier Textured Polyester Oxford – lightweight, water-resistant, adaptable, and printable for applications including outer shells of leaded x-ray aprons, laundry bags, linings, and more.

200 Denier Nylon Oxford Cloth – soft, pliable, available in nearly two dozen colors for applications include support sling components, transfer devices, and covers.

1050 Denier Ballistic Nylon – resilient, durable, flexible for external shells of orthopedic support systems or support braces where freedom of movement and strength are needed.

TVF carries dozens more in-stock options that can be formulated with finishes, coatings, and colors that meet strict specifications. TVF Sales Consultants can also work side-by-side with customers to develop customized solutions.

## "WE CAN WORK DIRECTLY WITH YOUR PRODUCT MANAGERS AT EVERY STEP."

# MARINE FABRIC

Explore non-slip and water-repellant marine fabrics engineered to endure extreme weather conditions. Fade-resistant and sturdy acrylic-coated polyester fabric makes long-lasting yacht upholstery, vessel covers, and grippy floorboard lining. Heavy-duty vinyl marine fabric is ideal for windows and wrappings to protect cargo from seaspray. Sunforger® and SunMaster® are optimal marine fabrics, due to their mildew-resistant, antimicrobial finishes. Contact us today to learn more about the marine fabric solutions we can provide for you.

CASE STUDY: INDUSTRIAL

# ELEVATING 'AWFUL': HOW A FURNITURE COVER MANUFACTURER IS RAISING THE BAR WITH TVF SUNMASTER™

**THE QUEST FOR** the fabric – THE fabric – that checks all the boxes could take a while without the right guidance. Especially when you're trying to impart quality into a product where quality hasn't always been the number one consideration.

"We searched all over the world, really, for fabric," says CoverMes Co-Founder and President Tim Howe. "We're dedicated to being a U.S.-based manufacturer and after, I would say, 18 months? Twenty-four months? Maybe even longer, we finally found TVF." Through samples and more product testing, SunMaster™ was selected for the durable and stylish covers he produces and sells.

The Connecticut-based company, built from the brainchild furniture cover solution of Founder and Chief Executive Officer Molly Sullivan Howe, makes custom outdoor furniture covers designed to be deployed with ease, offer exceptional protection with a precise fit, and be stored neatly and swiftly. With so many considerations, it's a tall order for any fabric. The exacting product demands of a customizable offering are only part of the equation:

Tim describes furniture cover offerings available on the market today as "fragrant," made from cheap materials, and "just plain awful," so he and Molly set out to change that.

"Of all the fabrics we've been able to research, the TVF SunMaster™ is perfect for this application."

CoverMes started working with TVF in 2020 under the recommendation of their manufacturer. In addition to outdoor coverings, CoverMes has diversified into making covers for a wider range of applications: indoor furniture, hotel service carts, and more. Poolside, however, is where CoverMes really shines, allowing the covers to be stored in a bag on the back of chairs or chaises and flipped over to protect the furniture and towels underneath when it rains. Once the precipitation passes, hotel customers can quickly return to their revelry, relaxation, and running up their bar tabs.

Tim says water-resistant SunMaster™ is ideal, because "it's good-looking and it doesn't fade in the sun as much as other fabrics. It's durable, and we've had a great experience in working with TVF." The nature

**"OF ALL THE FABRICS WE'VE BEEN ABLE TO RESEARCH, THE TVF SUNMASTER™ IS PERFECT FOR THIS APPLICATION."**

of the business calls for high-quality materials in a range of colors and a quick turnaround for its customers – often owners of large estates, commercial properties, or hotels in luxurious zip codes – and TVF has become the textile partner of choice for Molly and Tim.

SunMaster™, available through TVF, is a 600-denier, solution-dyed polyester that is urethane coated with a Durable Water Repellent (DWR) finish. In addition to furniture covers, SunMaster™ is great for boat covers, canopies and awnings, patio umbrellas, outdoor seating and pillows, and horse blankets. It features an antimicrobial finish and has a 5-year limited warranty.

You can learn more about SunMaster™ from a TVF team member or request a sample.

# OUTDOOR PRINT MEDIA FABRIC

Only attractive, consistent materials are selected as printable outdoor media fabric. Quality vinyl print media fabrics make excellent frontlit displays due to strong, waterproof constructions. Mesh fabric has an open build to allow airflow, making it a smart choice for banners or building wraps in windy regions. Many of our lightweight polyester outdoor fabrics feature mildew- and UV-resistant properties optimal for flags and banners. Contact us today to learn more about the outdoor print media fabric solutions we can provide for you.

# TVF TEAMS UP WITH PARALLAX DIGITAL STUDIOS FOR SUPER BOWL LIIIV

**TVF TEAMED UP** with valued customer Parallax Digital Studios to print high-profile graphics for Super Bowl LIII held at Mercedes-Benz Stadium in Atlanta, Georgia on February 3rd, 2019.

Parallax Digital Studios, located in Kennesaw, Georgia, is a highly valued TVF customer. They have been in business for more than 25 years and are well-known for their passion for efficiency and innovation. Parallax was sought by Super Bowl contract holders to produce high-quality graphics for The Big Game. The groups contacted Parallax months in advance to qualify their company, services, and capabilities. According to Lee Clevenger, Vice President of Operations for Parallax Digital Studios, representatives of these groups visited their facility to witness the production capacity and see processes firsthand. This was a necessary step to ensure Parallax could satisfy their high-quality graphic needs and tight production turn times required for Super Bowl LIII.

The largest challenge Parallax faced was to outfit a massive stage with endless amounts of cabling, trusses, tie-downs, and speakers, with an aesthetic dual-purpose solution to hide these components and to provide eye-catching branding for Super Bowl LIII.
To further complicate the project, there could be only three days from start to finish; from taking measurements in the field to fabrication to installation and no mechanical fasteners could be used. Parallax jumped at the opportunity to deliver a solution. Considering the time constraints and tight turn-time, Parallax elected to utilize the dye-sublimated fabric and SEG frame approach to deliver on the needs for high-end, seamless graphics.

Clevenger states they relied on their TVF Print Media Sales Consultant, Danny Jimenez, as a knowledgeable and dependable resource during the entire project. According to Clevenger, Parallax relied on Jimenez's expertise for product recommendations as well as the delivery of the fabric itself within a tight deadline. With the understanding that these displays would serve as the primary backdrop for many primetime events throughout Super Bowl LIII, the finished results needed to be stunning and attention-grabbing. Jimenez and Parallax determined that TVF's Supernova fabric was perfect for the large lightbox graphic requirements. Knowing they could rely on Supernova's tight warp knit, lock-stitch, and durable construction, they were able to place strategic holes in the graphics without excessive tearing or graphic faults that would reveal speakers behind the structure.

Parallax also decided to utilize TVF's Midnight Blockout fabric for additional surrounding graphics due to the fabrics excellent print quality and durability. The finished graphics for the surrounding displays were required to withstand dramatic temperature shifts expected for the duration of the two-week event. Parallax states "we needed the reliable print consistency synonymous with TVF digital textile media because we needed to achieve flawless prints with only enough time to get the job done perfectly on the first try."

**"WORKING WITH TVF PAIRED WITH THE QUALITY PRODUCTION TEAM FROM PARALLAX, THE SUPER BOWL LIII PROJECT WAS A RESOUNDING SUCCESS!"**

TVF's VP of Sales, Jeff Nonte classified the Super Bowl LIII project with Parallax as "a showcase application and headlining achievement illustrating how we work closely with our customers."

To summarize the Super Bowl LIII project, Parallax stated: "the stage for the massive replica of the Lombardi Trophy took many companies working together to meet tight deadlines in a bitter, rainy environment." Parallax adds, "it was a daunting task and huge investment, understanding that it would be the first thing and last thing people saw (at the stadium Super Bowl LIII experience) and needed to be executed to perfection." Clevenger states "working with TVF paired with the quality production team from Parallax, the Super Bowl LIII project was a resounding success!"

| **Weight** | 8.5 oz. |
| **Width** | 59/61” |

LEARN MORE

When designing outerwear, it's important to keep the end application in mind. A ski jacket facing snow, wind, and inclement weather requires different fabric than a breathable fleece sweatshirt worn for a short hike. While TVF has solutions for both applications (and everything in between) this article will help you select the best fabric for your outerwear needs.

**What is the best fabric for inclement weather?**

For extreme weather conditions pick a fabric that has good waterproof performance and breathability. It is also critical that the fabric is comfortable, not too stiff, or noisy, and is rugged enough to handle all outdoor conditions. These types of jackets can be worn for sailing, backpacking, or even in the workplace.

TVF stocks three versatile options for these types of end-uses. Our Mid-Weight Nylon Taslan has a waterproof breathable, microporous coating with a durable water repellent (DWR) finish. Tough and tapeable, our taslan fabric is often used in high-end outdoor jackets and pants for athletes, military, sailing, hiking, police wear, and workwear apron or bibs. Additionally, we offer this style with a laminated tricot lining, eliminating the need for a jacket liner. Last (but certainly not least) our Polyester Midweight Taslan has a waterproof breathable film that can be dye sublimated with your custom print. These fabrics carry strong waterproof ratings needed for extreme weather, with outstanding breathability to help keep you comfortable and move perspiration away.

TVF also offers several coatings and laminates with a variety of fabric styles to choose from. We're also proud to offer an array of customized fabrics in nylon, polyester, recycled polyester, and stretch materials.

**What is the best fabric for sweatshirt and fleece outerwear?**

Whether you want maximum insulation or lightweight protection, TVF offers a selection of fleece fabrics that cover the spectrum.

Our 3 Layer Polyester Fleece Soft Shell is one of our best-selling fleeces for cold conditions. It's lightweight and cozy, with a soft-shell fabric that's perfect for creating personalized looks with dye sublimation. Specially constructed with a DWR face, it also includes a wind/water guard membrane to keep the wind and the rain from penetrating. One thing to note: while the membrane offers waterproofness, it's not meant for harsh rain conditions on its own.

Another popular option is our 2 Layer Polyester Fleece Soft Shell, a fashion-forward fabric for breathable, comfortable fleece jackets, sweatshirts, and hoodies. This fleece features a DWR face and is a top choice for dye sublimation. The 2-layer laminated construction offers excellent snag and pill resistance.

If anti-pill performance fleece is what you're looking for, check out our USA-Made Montana Fleece. From yarn to knitting, brush and shearing, this highly engineered fabric also boasts an effective wicking finish. Great for activewear sweatshirts and jackets, Montana Fleece dye sublimates beautifully. (We also offer fabric for sleeve cuffs and waist band trim.)

**What is the best fabric for lightweight outerwear?**

Windbreakers and rainwear that would usually be worn during milder temps and not subjected to heavy or long periods of rain, will typically be made without a waterproof breathable film or coating. However, it's important to design these jackets with fabric with good water repellency and yarn construction; this ensures your apparel will not quickly wet out, while also offering good wind resistance.

Our 90/10 Polyester Microfiber Spandex Woven is a very strong water repellent, 4-way stretch fabric, making it a great choice for lightweight jackets that athletes and outdoorsman love. The polyester micro stretch has exceptional comfort and flexibility, lighter weight, and dries quickly for any outdoor activity. This fabric resists snagging, making it a great choice for lightweight hunting jackets and pants.

Take note: the 90/10 Polyester Spandex can be dye sublimated.

Another top choice is our Mid-Weight Nylon Taslan (also available in polyester for dye sublimation). This versatile fabric is perfect for both mild and moderate conditions. TVF also stocks coated and uncoated taffetas and ripstops. These are available in both nylon and polyester, with or without water repellant.

**What is the best fabric for jacket linings?**

For jacket linings and pocketing, we offer brushed tricot, fleeces, meshes, textured polyester and nylon styles, many with a wicking finish. For extra warmth, our extensive selection of fleece styles is recommended. For technical jackets designed for maximum airflow, venting panels in the underarm, waist, or back are suggested. Knitted mesh fabrics are available in a variety of weights for any application.

If durable elbow and knee reinforcements are what you are looking for, we offer a large selection of woven nylons or polyester fabrics, including Cordura® fabrics.

TVF is excited to work with you on your next outerwear project! To learn about more of our fabrics or to get a sample for yourself, contact one of our sales consultants today.

# PET ACCESSORY FABRIC

Many heavy-duty 500 and 1000 denier fabrics are water- and mildew-resistant, ideal for soft-sided pet carriers and blankets. Mega Grip® fabrics offer a non-slip surface that holds straps in place, adds traction to riding gloves, and keeps pet beds from slipping. Choose printable CORDURA® HP fabric for custom pet bags. SunMaster® fabric features an antimicrobial finish optimal for animal- and rider-friendly horse blankets. Contact us today to learn more about the pet accessory fabric solutions we can provide for you.

# KORNIT'S PRESTO MAX PRINTERS + TVF COLLABORATION

APPAREL | HOME DÉCOR

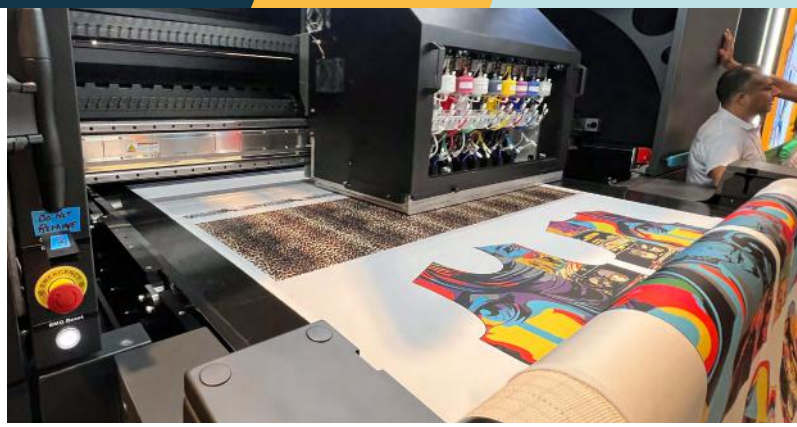

**WHAT IS THE BEST** approach to ensure printer technology and fabric work in tandem for a seamless textile printing job? A comprehensive partnership and rigorous testing between the printing manufacturer and fabric supplier. In the case of TVF and Kornit, the collaboration is designed to consistently deliver sharp, reliable results.

The Kornit Presto MAX Printer for direct to garment printing is compatible with 25 prepared for print natural fiber and polyester fabrics from TVF – each selection is engineered for exceptional prints. These fabrics, which have become demonstration mainstays in Kornit's state-of-the-art New Jersey showroom, are engineered with a clean, consistent surface that not only produces vivid, detailed prints but also helps protect the printer for long-term performance. Kornit Presto MAX technology prints directly to the fabric, cutting out any extra steps so you can get the job done quickly.

"Since Kornit has developed their Presto and Presto Max, they have tested all of our natural fiber fabrics, and all of them have worked great with their machines," TVF Apparel & Home Décor Sales Director Samantha Marion. "We've done our due diligence to make sure our fabrics are thoroughly prepared by minimizing shrinkage, eliminating surface flaws and delivering consistency. That means when you print with TVF fabrics on a Kornit system, you can count on a smooth reliable experience."

The longtime collaboration between TVF and Kornit began with simple fabric testing and has grown into a robust partnership built on technical expertise and shared innovation. TVF's rigorous quality control, testing, and consistency processes ensure fabrics that meet the high demand of direct to fabric printing with Kornit Presto MAX printers.

TVF has thrived for more than 50 years in the textile industry, and serves as an extension for clothing producers, printer manufacturers, print service providers, and more. Connect with an experienced member of our sales team at TVFinc.com.

The following fabrics have been tested and pre-approved for Kornit printers:

## POLYESTERS

- 4.1 oz. Polyester Stealth

# TRANSPORTATION FABRIC

Reinforced, mildew-resistant canvas transportation fabrics are perfect for truck tarps and asphalt covers, including those coated in CANVAK™ or flame-retardant PYROSNUFF™. Vinyl-coated polyester transportation fabrics feature dense constructions and UV-inhibiting properties, optimal for dock seals and airline applications. Quality mesh fabrics withstand high winds and allow airflow, ideal for the containment of raw materials on open-bed trucks. Contact us today to learn more about the transportation fabric solutions we can provide for you.

# UNIFORMS FOR ALL SEASONS, PURPOSES, AND PROFESSIONS

APPAREL | INDUSTRIAL

## CALL IT WHAT YOU WILL: GEAR, GARB, DRESS, ATTIRE, JERSEY, OUTFIT.

Use it how you will: in the workplace, on the field of play, in the line of duty, in a clinical setting. Uniforms manufactured with quality, consistent textiles convey team unity, professionalism, and more. They also set up the wearer to perform at their best every day.

The vast and unique demands for uniforms mean the right textiles require a balance of utility, durability, and toughness that marries with a crisp and cohesive appearance. Fabric options for uniforms can be expansive, but it helps to start with the end use in mind. Most importantly, working with a knowledgeable, experienced team can help you target the right option to fit your specific need.

### ATHLETICS (JERSEYS AND SPORTS UNIFORMS)

**6.3 oz. Polyester Microfiber Heavy Birdseye Flatback Mesh**
Wicking finish and “no hole” construction for baseball, field hockey, and volleyball jerseys or uniforms
**4.1 oz. Polyester Microfiber Light T-Shirt Jersey**
Lightweight, silky feel for jerseys and sport tops
**10.3 oz. 87/13 Shiny Polyester Spandex Football Pant**
Durable pants and tops
**5.7 oz. Polyester Scuba**
Cheerleading, lacrosse, baseball
**8.5 oz. 94/6 Polyester Spandex Heavy Scuba Deluxe**
New and improved for baseball pants, hoodies, and jerseys
**4.7 oz. Polyester Raptor**
Anti-pilling construction for sports jerseys

### ATHLETICS (COMPRESSION)

**5.9 oz. 84/16 Polyester Spandex Semi Matte Tricot**
Compressive layers for sportswear, military, workwear, and undergarments

### ATHLETICS (WARMUPS)

**10.2 oz. 2 Layer Polyester Fleece Soft Shell**
Durable water repellent and breathable for jackets and team apparel
**4 oz. Polyester Mid-Weight Microsuede**
Jackets and windbreakers
**4.1 oz. Mid-Weight Polyester Taslan**
Athletics outerwear
**5.8 oz. Polyester Heavy Microsuede**
Windbreakers, athletic and uniform jackets, upscale boardshorts and swimwear, golf windshirts

### TRADE UNIFORMS, APRONS, AND WORK SHIRTS

**7.5 oz. 65/35 Polyester Cotton Twill**
Aprons, work shirts, uniforms, correctional facility uniforms
**4 oz. Mid-Weight Nylon Taslan**
Jackets, pants, aprons, bibs
**300 Denier Textured Polyester**
Tradeshow apparel, safety vests
**4.1 oz. Mid-Weight Polyester Taslan**
Workwear bibs and aprons, jackets
**7.6 oz. Rincon Cotton Twill**
Two-ply for pants, shorts, and jackets

### MILITARY, TACTICAL, LAW ENFORCEMENT

**4 oz. Mid-Weight Nylon Taslan Waterproof Breathable**
High-end inclement weather gear, military and police uniforms and outerwear, aprons and bibs
**5.9 oz. 84/16 Polyester Spandex Semi Matte Tricot**
Compression tops, military workwear, apparel, undergarments
**300 Denier Textured Polyester**
Safety vests and jackets
**4.3 oz. Polyester Microfiber Flatback Mesh**
Police uniform apparel, activewear, polos

### SWIMWEAR AND RASHGUARDS

**4 oz. Polyester Mid-Weight Microsuede**
Board shorts and swimwear
**5.8 oz. Polyester Heavy Microsuede**
Upscale boardshorts, swimwear, uniforms

TVF supplies uniform fabric to manufacturers throughout the U.S. and the materials we carry – a large portion in-stock – stand up to demanding dance, exercise, and team sports situations, as well as fabrics engineered for occupational uses.

On the hunt for a non-PFAS textile solution for uniforms, TVF’s collection includes alternatives that will suit your needs. Talk with a TVF Sales Team member today and lock in the ideal material for your next run.

# UPHOLSTERY FABRIC

High-quality upholstery fabric makes resilient cushions and furniture that enhance the comfort and aesthetic of any space. Durable polyester upholstery fabric has an easy-to-clean surface perfect for sitting room furniture.
