At Meristem Design, we create bespoke green solutions for business, public and residential areas. We deliver custom sustainable projects that place nature at the forefront to bring benefits to people, communities and the environment.

From project inception through to aftercare, we provide high-quality services such as:

Design

Fabrication

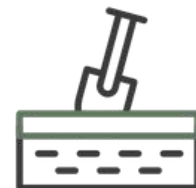

Delivery

Installation

Planting

Maintenance

Turning the grey green®

Reconnecting children with nature

In our workshops, pupils will delve into the fascinating world of plants, focusing on the crucial roles soil, seeds and plants play in our lives.

The sessions are hands-on, with sensory practical integration exercises that ignite curiosity and a love for gardening and the environment.

We deliver a hands-on, curriculum-linked engagement programme designed to sit alongside the installation of Sustainable Drainage Systems in schools.

Highlights:

**Seed selection
and planting**

**Practical exploration
& cultivating care**

**Environmental
impact**

Designed to help students engage meaningfully with plants and their environment, the workshops are flexible and can be tailored towards children's' and school curriculum needs. The sessions can include:

- **Seeds/edible planting**
- **Plant science**
- **Hands-on-gardening**
- **SuDS Planter demonstration**

The sessions will also include a presentation and discussion on the importance of the environment and sustainable practices.

Max 1 class per session (typically 20-30 children).

Hands-on engagement

Our nature workshops aim to teach children the function of SuDS in their school as well as practical planting skills and the importance of biodiversity.

Many children today have limited everyday contact with soil, plants and growing things. Our sessions give them the chance to touch, plant and care for something themselves – sowing seeds, exploring soil, and observing how plants grow over time.

This hands-on involvement helps rebuild a personal, sensory connection to nature that can be difficult to get from a classroom alone.

Workshop sessions

Practical gardening and seeds/edible planting

Seeds, edible planting & plant science: Pupils explore seed selection, bulb planting and edible planting, learning the fundamentals of how plants grow and why soil health matters.

Hands-on gardening: Pupils build their confidence and gardening skills by taking a cutting from a common herb - such as rosemary, mint, lemon balm or thyme - and learning the steps needed to help it grow into a healthy new plant.

Workshop sessions

Understanding SuDS and Flood Prevention

In this part of the workshops, students are introduced to the purpose and function of their newly installed SuDS planters.

Through live demonstrations and guided discussions, they learn how these planters help slow the flow of rainwater, reducing the risk of surface water flooding in the school grounds.

The sessions explore key concepts such as drainage, permeability, and climate resilience, making environmental infrastructure tangible and relevant.
