

Argentine Space Company

STRATEGIC SPACE AND SATELLITE CAPABILITIES

Interior of the pressurization module of the VEx5A experimental vehicle. April, 2017

WE ARE VENG

We are an **Argentine space technology company specializing in the development, integration, and operation of complex technological systems**. As a key partner in the National Space Program, we operate across the entire value chain of the sector, contributing to the strengthening of sovereign capabilities, industrial development, and Argentina's international standing.

At **VENG**, we combine advanced engineering, systems integration, specialized infrastructure, and operational capabilities to deliver comprehensive, mission-critical solutions. We help governments, agencies, and organizations transform technological capabilities into tangible results with measurable economic and operational impact.

Design > Engineering > Manufacturing > Integration > Operations > Data > Services

OUR CAPABILITIES

At **VENG**, we offer comprehensive space solutions covering the entire value chain of the sector:

**Earth Observation,
SAR Expertise**

**Satellite Data and
Downstream Services**

**Ground Segment,
Engineering
and Services**

**Advanced Aerospace
Design, Manufacturing
and Testing**

**Access to Space: Enabling
Technologies and Services**

UNIQUE TECHNOLOGICAL INFRASTRUCTURE

At **VENG**, we operate world-class aerospace facilities, including:

Friction Stir Welding (FSW) for flight-critical aerospace structures.

A metal additive manufacturing system using Directed Metal Deposition (DMD) technology—one of the few systems of its kind currently in operation.

Space-grade electronics integration laboratories.

End-to-end, space-grade testing and qualification facilities for electronic manufacturing processes, space systems, and subsystems.

Full satellite integration capabilities.

**We go beyond research and development.
We deliver operational space solutions.**

Integration of the SAR antenna panel of the SAOCOM satellite. April, 2015

HIGHLY QUALIFIED WORKFORCE

VENG's greatest asset is its highly specialized workforce:

Engineers and technicians trained and certified through major space programs.

Unique capabilities in Argentina to train and certify third parties in critical aerospace processes.

The ability to transfer technology and deploy it within our partners' local facilities.

At VENG, we not only manufacture hardware; we also transfer technological knowledge and operational capabilities.

VEx 5A, a two-stage experimental vehicle powered by liquid propellants. Launched on April 20, 2017, from Punta Indio, Buenos Aires, Argentina.

GLOBAL STRATEGIC CONTEXT AND POSITIONING

Space capabilities have become **strategic assets for national development, technological sovereignty, and industrial competitiveness**. Governments and organizations worldwide increasingly rely on space infrastructure to support critical functions such as Earth observation, security, resource management, telecommunications, and emergency response. In this context, technological partners capable of delivering reliable, sustainable, operationally robust solutions play a central role.

STRATEGIC ALLIANCES FOR TECHNOLOGICAL DEVELOPMENT

At **VENG**, we build long-term partnerships aimed at transforming technological capabilities into high-value solutions that foster sustainable development, industrial growth, and international cooperation.

Through this approach, the company collaborates with public- and private-sector partners through flexible cooperation frameworks aligned with the objectives and priorities of each initiative.

These partnership models may include joint technology development, shared programs, infrastructure deployment, knowledge transfer, and operational support, ensuring alignment with each organization's vision, priorities, and specific needs.
