

Rivet Divider System

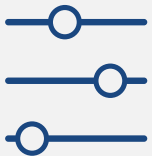

Rivet Divider System Organised Small Parts Storage

Transform heavy rivet racking bays

The Rivet Divider System converts heavy rivet racking into organised storage locations for components, consumables, fittings and picking operations. Adjustable steel dividers allow compartment sizes to be configured around your stock, helping improve organisation, visibility and picking efficiency.

Key Benefits

Flexible
Configuration

Faster Picking

Durable Steel
Construction

Quick Installation

Better Space
Utilisation

Popular Applications

- Adjustable divider positions every 50mm
- 600mm deep divider system
- 300mm rear retaining panel
- 150mm front retaining panel for stock visibility

Storerooms

Warehouse Picking
Locations

Workshops

Maintenance
Departments

Rivet Divider System

Why Rivet Divider?

Loose small parts and consumables can quickly become disorganised, leading to longer picking times and reduced productivity.

The Rivet Divider System creates structured storage compartments within existing rivet racking, helping teams locate products faster, maintain tidier stockrooms and improve inventory control.

Suitable for warehouses, workshops, maintenance stores and manufacturing environments.
