MIXED 8R ACTIVITIES GALLERY

We finally completed our 8R Activities process after worked for during first 4 months of our project. Most schools in the project worked hard and did these amazing works placing in the next pages.

HAPPY WATCH...

REDUCE

Reducing plastic waste is an essential step in environmental conservation. Here are four practical ways to reduce plastic waste:

1 Use Reusable Bags

Keep reusable bags in your car or near your door for easy access.

2 Choose Stainless Steel

These alternatives are durable, safer for food storage, and can be used repeatedly.

3 Don't Use Single-Use Plastic Bottles

Invest in a reusable water bottle made of stainless steel or BPA-free plastic.

4 Reduce Plastic Packaging

Buy in bulk when possible to reduce the amount of plastic packaging per unit of product.

Definition of Recycling

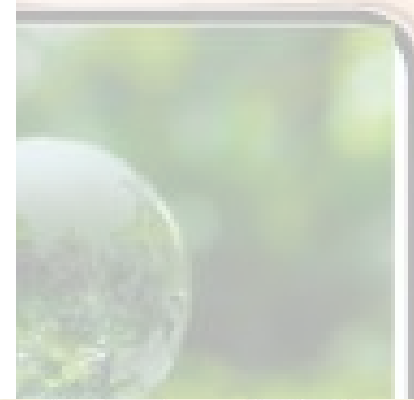

• What is Recycling?

- Environmental Benefits:
 - Reduces waste sent to landfills and incinerators.
 - Conserves natural resources such as timber, water, and minerals.
 - Energy Conservation:
 - Saves energy compared to producing new materials from raw resources.
 - Pollution Reduction:
 - Reduces greenhouse gas emissions that contribute to climate change.
 - Economic Benefits:
 - Creates jobs in the recycling and manufacturing industries.
- Recycling is the process of collecting and processing materials that would otherwise be thrown away as trash and turning them into new products. It involves three main steps: collecting recyclable materials, processing them into new products, and purchasing items made from recycled materials.
