FIPLUS FISTONE BUILDING TECHNOLOGY

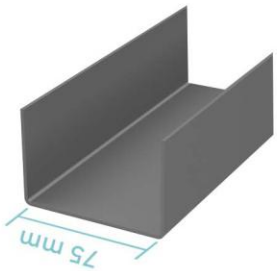

FIPLUS Fistone Panel Swimming Pools

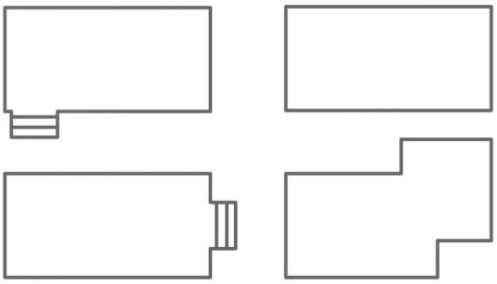

BRT's latest technologies are used in the construction of all our new pool designs. Steel reinforced multi-purpose carrier feet made of galvanized steel sheet from a specially made mold are cut from any point and a pool is made at the desired height. Fistone panels, which are the most important parts of the bearing walls of our pools, are the closest product to concrete. The structure of the fibercement panels we use in the Fistone Panel pool; It is made of a mixture of silica sand, cement and binders with a process and is released to the market after firing. Silica sand is the main raw material of glass. Fibercement panels also have the ability of glass to resist atmospheric effects. Our panels are rustproof, non-deformable, germ-proof and resistant to underground effects.
