Hello Archie Family

I am coming to you again with yet another open letter to explain a few things that are happening at Archie Alliance.

We have been working on our Layer 1 BlockChain since May of 2022 and finally we were able to deploy it on Archie Main Net. Since then, we have started a pre –sale on ArchieChain and a successful Pre-Sale on BSC for WARC/wbnb pair and launched. Our BSC launch was very successful and accepted by many and more to come. We launched at .00005 and now sitting around .00009 (ATH .00011) while many of the pink sale contributors have sold and that is pretty usual on BSC side. So, we are being accepted by community and this is just a beginning of our journey.

Now let's get back to what we wanted to discuss on this open letter. There are many new blockchains being launched almost everyday. Many of them are depending on wrapped version on other chains and not pushing their own blockchains. We have done an experience ourself on that by launching on BSC. But why did we start our own BlockChain? Are we going to build our project on other chains and abandon the hard work we have done for our ArchieChain?

Let's talk about why is this an issue in this industry. The basic question that I asked everyone when we created our blockchain was “which came first? “Chicken or Egg”. I didn’t get a straight answer on this. In relation to our blockchain, let's re phrase that question. How is it possible for a holder to buy into ArchieChain or on reverse side, how are they able to sell their investment and leave .

Most of the devs and crypto enthusiasts will answer simply without thinking, buy the stable coin in an exchange and use ArchieSwap to swap it. Here comes the real issue, which exchange will you buy the pair stable coin of ARC or WARC? We are too small and

not most of the exchanges will accept us. Don't get me wrong, there are exchanges that will accept us and charge a heavy fee, but will they list our pair stable coin in their exchange since we are a brand-new chain? The answer is no. So, we are stuck and at their mercy of someone to list us.

So, what do we do? We can keep creating the Wrapped version of ARC and deploy on all other chains and may be few exchanges and attract more investors and as we grow, we may find ourselves successful doing. Is that a way to do it? It is a way but is that what we wanted to do? Is that the reason we worked so hard to create all these? Many projects will deploy a token or coin but don't have it setup the way we have our project.

Archie Scan is ready (app.archiescan.io)

Archie Swap (app.archieswap.io)

Archie Bridge (bridge.archiechain.io)

Archie Aggregator (ArchieAggregator.io)

And three NFT collections (ArchieNekoNFT.io, ArchieMetaNft.com, WeCareKittyNFT.com)

Now, these are already launched and working. Why did we create all these utilities and depending on other chains and not building ours. Of course, we wanted to go the easy route to be successful but building a foundation is "very important."

Archie Vault was the answer to all these questions and concerns.

Let me explain how the Archie Vault will solve this issue for us. Archie Vault is a Multi-Chain Dashboard that is our own exclusive dApp created by ourselves from scratch.

What it consist of on V1 are:

Ability to purchase ARC/WARC with ETH on Uniswap, with BNB on BSC and with Matic on Polygon. Yes, you heard it right. Whether you are used to Ethereum, Binance or polygon, you are able to buy ARC/WARC in Archie Network through the current network you are in and receive your ARC in Archie Network.

I will explain a bit more in this subject. In order for you to purchase ARC on Archie Network, you will need ARC in your wallet. Kind of confused? ARC is the native coin of Archie Protocol. It is the coin that fuel the transaction and we will have a pair in the Archie Network that will be WARC/ARCUSD. In order for you to invest in this pair, you will need the fuel (\$ARC) in your wallet. That is where the dilemma came in. "Chicken or Egg." IF \$ARC is the native coin and only available in Archie Chain then how is it possible for people to buy it. Now the pair ARCUSD, which is the stable coin of ArchieChain was created by Wrapping USDT from BSC side and which is also only available in ArchieChain. Pretty much , unless I create a bunch of different bridges and liquidity in multiple places on DEX and CEX, it won't be possible for anyone to buy in or cash out.

Here comes the Archie Vault to the rescue. This dApp with support of many API and smart contract we can achieve both buy in and cash out features at a very lower cost and yet our holders keep their coins in their custody rather than an exchange holding you hostage.

How is it all possible?

Let's take a patron who wants to buy with ETH or Ethereum Network with \$1000 for example.

He will connect his/her wallet to the Archie Vault dApp and choose ETH as the chain he wants to pay and follow the on-screen instructions. Please Note: from a pc you can connect directly to the dApp and from a mobile device, you will have to use the MetaMask browser and insert the dApp link to do the process.

THE PROCESS:

1. There is a convenience fee of 2% (in this case \$20) payable to Archie Vault.
2. dApp will be able API and use the fund less the convenience fee (in this case \$980).
3. API will do three functions at this time, it will interact with smart contract and perform the following tasks: It will convert ETH to ARCUSD, Credit the same amount in USDT in the liquidity pool and send \$ARCUSD for the amount + 10 \$ARC to patron's Archie Network Wallet*.

ADDING ARCHIENETWORK TO YOUR WALLET

Once you select Networks, you'll see all the networks that you have added. On the bottom of that menu, you can see a new button named "Add Network". You may click on it and proceed with adding a new network.

Network Name – Archie Chain (ARC)

New RPC Rule – <https://rpc-main-1.archiechain.io>

Chain ID – 1243

Currency Symbol – ARC

Block Explorer URL – <https://app.archiescan.io>

Selling &
Cashing Out

What happens when you want to sell ?

It will be almost the reversal of the buying process.

THE PROCESS

1. You will have to connect your wallet to our DEX (app.archieswap.io)
2. Depending on the coin you have got in your wallet , \$ARC or \$WARC, use the top column for your existing coin and pick ARCUSD for the bottom column.
3. Upon swapping from \$ARC/\$WARC to ARCUSD, your wallet will credit ARCUSD.
4. Now you can connect your wallet to Archie Vault and choose to have your token in USDT to transfer to ETH, BSC (busd) or MATIC chain. There will be a small convenience fee payable to Archie Vault. We are hoping this will cover the swap fee and gas.

Summary

SUMMARY

As you can see, we are not just another crypto project. We are trying to be the complete eco-system by providing every kind of utilities for our patrons. Our goal is to build our BlockChain and be successful one day so other projects will adapt to our system, and we will grow exponentially. We can't do so, without continued research and adapting to new technology.

I greatly apologize for the delay in releasing ArchieChain. There are people invested into our Archie Chain pre-sale from early March. In order to suffice their long waiting, we have decided to give a FREE ArchiemetaNFT (www.archiemetanft.com) to any one of our patron holding more than .049 eth worth of \$ARC (which is about 2 million \$ARC or more).

We are introducing our V1 version of Archie Vault on phase 1 and will be adding more tokens to be used later on. Our ultimate goal is to have an eco-system that stands independently and efficiently to help our holders.

We have done about 34% for the Archie Chain pre-sale. That is a great achievement. As you may notice, we are doing a great job in BSC side, and it will do the same in Archie Network. Some of the added benefit of holding \$ARC in Archie Chain are:

1. Participate in Staking Validator Program. Please watch you tube video on official page: (<https://www.youtube.com/watch?v=rgRexTSLp3U>)
2. Able to stake in staking dAPP and earn more coins. We have put away 10% of total supply (1 Billion) to our staking program and there are no fees to participate.
3. Enjoy the Near-Zero gas fee.

Please note that Archie Bridge won't be available until after 1 week of launch of \$ARC in ArchieChain. This is to protect our patrons from loosing money from people who will bridge to arbitrage from BSC Side. Normal business will resume after 7 days.

Thank you

A handwritten signature in blue ink, appearing to be 'Jp'.
