SENZORNI TRAGOVİ

Radovi, eksperimenti za ovu izložbu testiraju ovaj projekat reinstalacija.

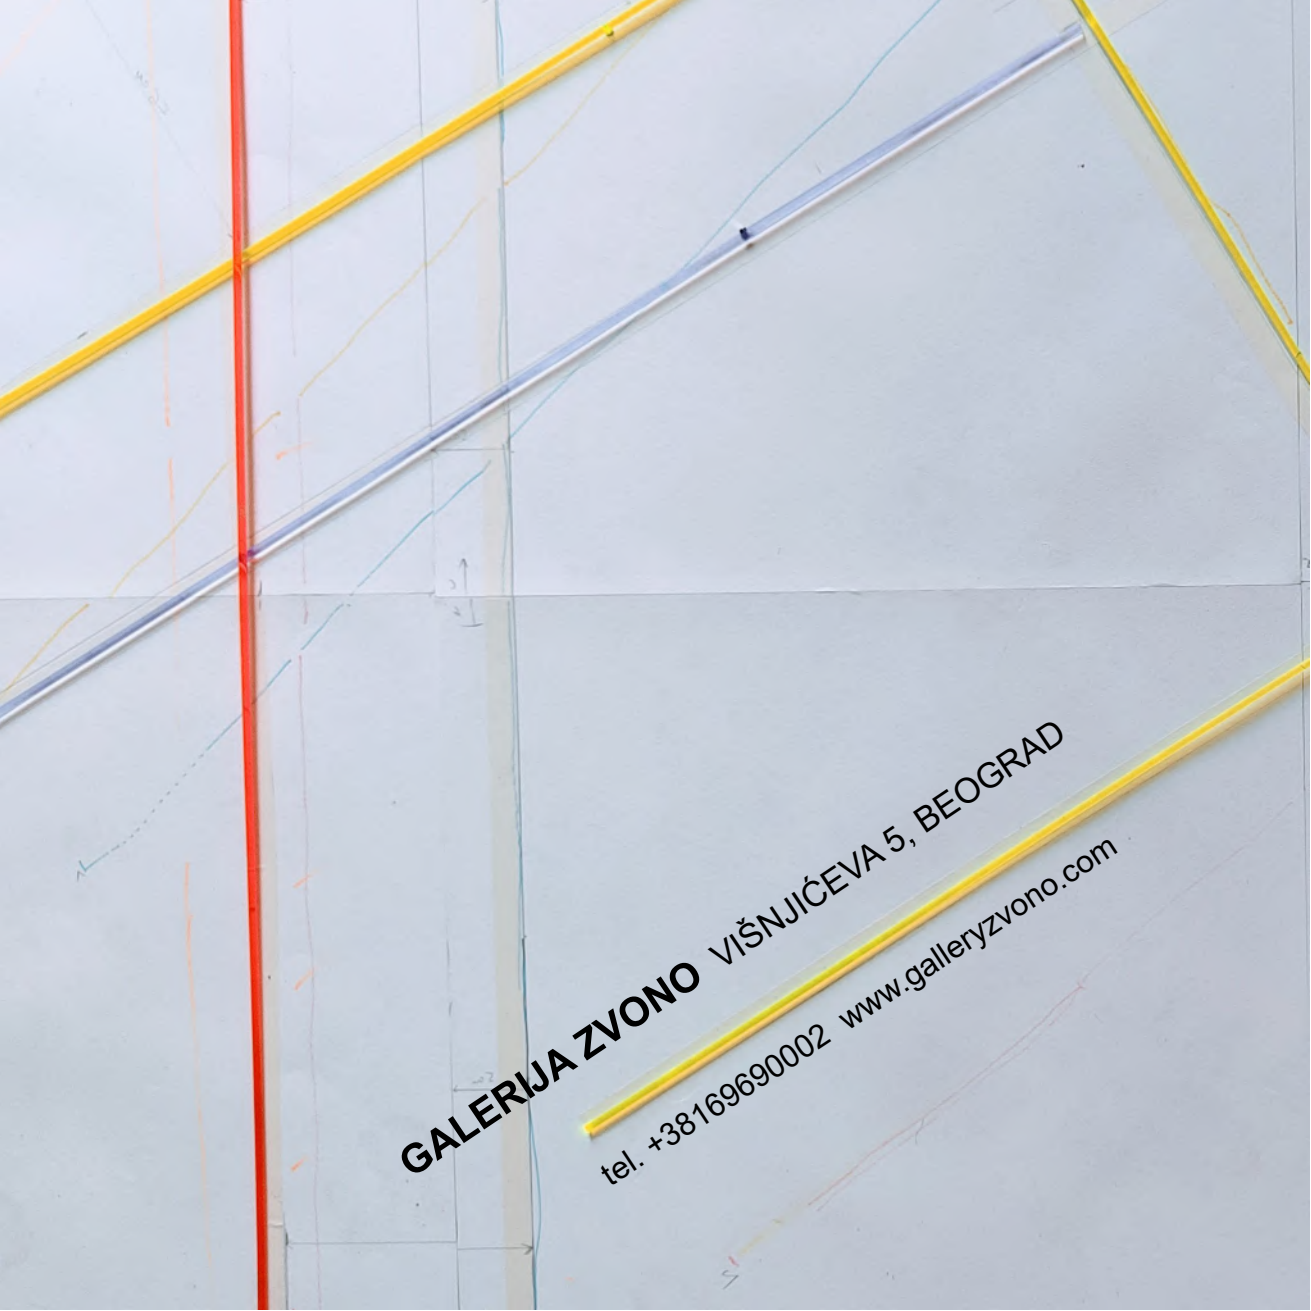

Senzorni elementi struktura, su u linearnoj distribuciji finih tubusa metakrilata, ili u zrakastom rasporedu struktura sa prijemnicima na vrhu. Magnetni elementi drže dimenziju strukture metakrilata izvan topološke ravni, dok zrakaste strukture u funkciji odvrćanja nagoveštavaju akustičku percepciju.

SENSORY TRACES

Works, experiments for this exhibition are testing this reinstallation project.

The sensory elements of the structures are arranged either in a linear distribution of thin methacrylate tubes, or in a radial layout of structures with receptors at their tips. Magnetic elements hold the methacrylate structure in dimension outside topological plane, while the radial structures functioning as deflectors hint at acoustic perception.
