The Powertex Practical Guide

Products, techniques and step-by-step methods for mixed media artists, sculptors and makers

WELCOME

Your Powertex companion

Everything you need to know about the core Powertex range, gathered into one beautiful, practical book to keep beside you on the work table.

Each section introduces a product or technique, lists exactly what you will need, then walks you through the method step by step. Look out for the coloured boxes as you go:

> **TIP**
> Useful advice to help you get the best results.

> **TAKE CARE**
> Important points about drying, varnishing and outdoor use.

Golden rules from the studio

- **Add powders gradually.** It is far easier to thicken a mixture than to rescue one that has become too dry.

Test first. Try a technique on a small area to see the effect before committing.
Be patient with drying. Thicker work takes longer, and many pieces need around three weeks before varnishing.
Protect your work. Easy Varnish keeps powders and effects safe, especially near the outdoors.

Before you start

- Keep Powertex at room temperature or beside a heat source before you use it. You can even leave it in the sun for a couple of hours. Warm Powertex is much more comfortable to work with.
- Latex or vinyl gloves keep your hands clean. Take care if you are allergic to latex. Working without gloves is also possible.
- Powertex is a universal medium, it is paint, a glue and a fabric hardener!
- Powertex is water-based and weatherproof

Stone Art

A papier-mâché with endless possibilities.

With Powertex, Stone Art becomes a self-hardening clay or a raised structure for painting, for fine and coarse stone effects.

Making a clay

Mix equal parts of Powertex and fine sand to keep a dough-like consistency.

Take care outdoors

Stone Art is happiest indoors. Outside, white Powercoat may keep white only briefly, and after a few weeks' direct sun two coats of Varnish
