WHY WE'RE HERE

Stonium was born from material, shaped by decades of experience in marble and concrete since 1965. Our roots lie in craftsmanship, in understanding how form, weight, and texture come to gether to shape meaningful spaces. What started as a family workshop has evolved into a house dedicated to supporting designers in creating cohesive, purpose-driven bathrooms

Despite the progress seen across bathroom design over the years, the washbasin has long remained a standardized element, often treated as secondary within the design hierarchy, rarely speaking the language of the space or delivering its intended message.

Through a concrete system that allows variation in tone, form, and texture, Stonium reposistions the basin as a lead element, central to both function and concept. Stonium is here. From daring forms to refined detailing and material depth, every element is shaped to let the basin become a lead voice in the bathroom, formally, functionally, and emotionally.

“Design fades
when it tries to
please everyone.”
STONIUM

OUR JOURNEY

From our roots in handcrafted concrete tiles to our global reputation for innovative design, we've always been driven by a passion for craftsmanship and quality. Specializing in durable, custom-made concrete solutions, we empower architects and designers to create stunning, one-of-a-kind spaces. Our evolution reflects a commitment to pushing the boundaries of design and functionality, ensuring each project is a true work of art.

1965 Launch of the Family Company

A family legacy begins with the production of concrete mosaic tiles and marble, laying the foundation for craftsmanship and expertise passed down through generations.

2013 A Commitment to Excellence

We made a significant investment to acquire advanced concrete technology in Russia and master the precision of molds in the USA. These milestones marked a turning point, enabling us to push the boundaries of strength, durability, and design.

2014 Launch of Stonium

Stonium is born, introducing concrete washbasins that merge durability with stunning design, transforming bathrooms into spaces of timeless beauty.

2016-2017 Expanding the Product Line

New and innovative washbasin designs are introduced, offering architects and designers endless possibilities to reimagine spaces.

2020 Expanding Concrete Creations

Stonium expands its offerings with shower trays, bathtubs, and fully customized concrete creations. From bespoke washbasins to large-scale tailored solutions, we provide architects and designers the tools to bring their unique visions to life.

2023 Dubai Distribution Facility

A major milestone is achieved with the opening of a distribution facility in Dubai, marking our growing international presence and commitment to global collaborations.

STONIUM

FROM FIXTURE TO PURPOSE

In a well-resolved bathroom, every element serves a purpose. The basin is often treated as a secondary fixture, yet it holds the potential to define tone, weight, and balance within the space. At Stonium, basins are not only designed to hold and drain water; they are considered architectural components, developed to contribute to the atmosphere, balance, and spatial identity of the room.

Each form is crafted to either integrate quietly or take visual lead, depending on the project's intent. This catalog presents a curated range of collections, each composed of distinct models and finishes. Every piece is built to serve the space with clarity, proportion, and material presence, without distracting from it.

STONIUM

NATURA *Collection*

The Natura Collection is made for designers who want to bring a rocky, unpolished presence into the bathroom. These basins are inspired by rough stone. Raw, heavy, textured, just like what you›d find in untouched nature. But unlike real stone, they come with zero hassle. No cracks, no fragility, no sealing issues. We›re having a visual strength and material honesty, but in a controlled, reliable form. Each piece is intentionally bold, with textures and edges that feel authentic and decorative. It’s the ideal choice when the design calls for something grounded, elemental, and real.

THE JUPITER

Glacier

Dune

Mist

Luna

There are pieces that decorate, and there are pieces that define. Jupiter is the definition. With an organic silhouette and deeply tactile surface, it feels more unearthed than manufactured. Its texture echoes sedimentary layers, while carved details give it a geological soul, raw, grounded, and strikingly sculptural. The design embraces imperfection and asymmetry, offering a primal beauty balanced by a soft inner curvature that invites touch.

Generous in depth yet elegant in profile, Jupiter speaks fluently with raw materials. It pairs effortlessly with concrete walls, stone floors, and bold marble, or stands out as the hero piece in minimalist settings. This basin isn't made for sterile spaces, it's designed for intentional interiors and clients who want to feel something each time they walk into the room. Available in four mineral-inspired tones, it adapts without losing its wild spirit, from jungle villas to mountaintop retreats.

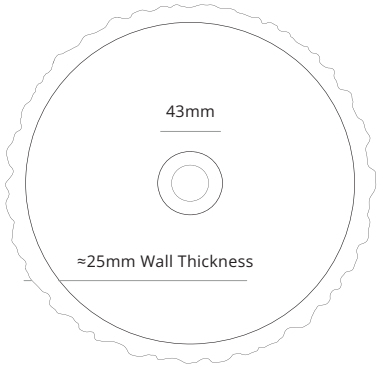

Crafted from Stonium's ultra-durable concrete and sealed inside and out, Jupiter is built to last. It performs under pressure while maintaining its raw aesthetic. Emotional, elemental, and unapologetically bold, the Jupiter basin doesn't just belong in a space, it defines it. Earthbound, yet somehow otherworldly.

THE CAESAR

Glacier

Dune

Mist

Luna

Brutal and poetic, the Caesar basin feels chiseled straight from the face of a cliff. Its grounded presence offers rare weight and honesty in bathroom design. The raw, rugged exterior mimics salt formations and weathered stone, deliberately textured to create a dialogue between nature and design. In contrast, the inner bowl is smooth, refined, and functional. Caesar doesn't seek attention, it commands space with quiet, elemental force.

STONIUM

Ideal for interiors that embrace imperfection and contrast, Caesar thrives in rustic lodges, desert retreats, and contemporary spaces grounded in materiality. It adds texture to polished settings and deepens the language of spaces already celebrating rawness and shadow. What makes Caesar so compelling is its contradiction: concrete that feels like untouched earth. Each surface is finished by hand, preserving irregularities, subtle speckling, and unique visual layers. No two pieces are exactly alike.

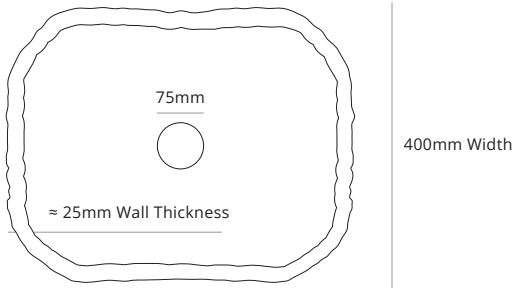

Available in the full Stonium palette, from volcanic greys to sun-warmed ochres, Caesar adapts while preserving its primal voice. It pairs naturally with raw wood, blackened steel, heavy linens, or monolithic travertine, amplifying depth and tone. Caesar isn't decorative, it's foundational. It anchors a space both physically and visually, made for designers who build from strength and clients who seek something lasting. It holds water, but more importantly, it holds presence.

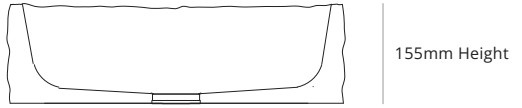

ORION

Weight	28 kg

Installation	Top Mount

THE GAÏA

Glacier

Dune

Mist

Luna

The Orion basin grounds the Natura collection with a bold presence and rich textural depth. Its rectangular silhouette amplifies the visual rhythm of the horizontal rocky surface, evoking the raw power of carved stone. With generous width and a confident stance, Orion makes a strong impression on the vanity, bringing a sculptural quality that feels deeply rooted in the natural world. It pairs effortlessly with bronze or stone-like fixtures to enhance its geological character, while black or brushed nickel taps introduce a refined contrast that leans modern.

STONIUM

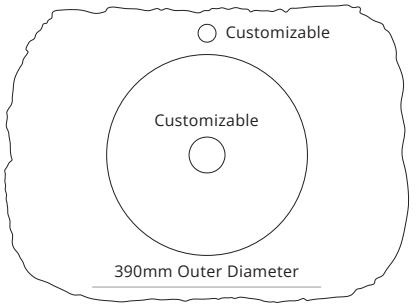

More than just a striking form, Orion offers structure and balance in spaces where material integrity is central to the design. Its defined outer edges lend a sense of architectural order, while the inner basin remains soft and smooth, providing comfort in daily use. This balance between strength and subtlety makes Orion ideal for organic-inspired homes, wellness-focused environments, or boutique interiors where texture tells a story and each element carries intention.

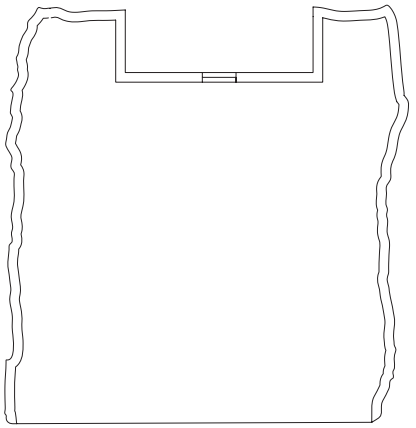

Available in all four Natura finishes, Orion adapts to different moods and palettes, from earthy warmth to cool mineral tones. Each finish brings out a different dimension of the design, allowing it to blend or stand out based on the surrounding space. For designers seeking elemental expression with clarity and depth, Orion serves as a versatile and compelling choice. It delivers presence without noise, and elevates its surroundings with a grounded elegance that endures.

THE GAÏA

Glacier

Dune

Mist

Luna

Gaïa is a lead centerpiece, and the design is built around it. This freestanding washbasin doesn’t enter the space quietly. It arrives like a force of nature, commanding attention the moment it appears. Wild, unapologetic, and impossible to ignore, it defies decorative trends and brings a sculptural power few pieces can match. With its rugged contours and heavy organic mass, it carries the energy of raw terrain into the bathroom, as if extracted straight from a hidden forest untouched by time.

This freestanding basin isn’t simply inspired by nature. It is nature, captured and grounded just enough for modern living. Its untamed soul is preserved in every detail, refined with subtlety, not restraint. Gaïa challenges the soft minimalism found in most bathrooms and dares to anchor a space with something primitive, tactile, and alive. It doesn’t whisper serenity, it asserts presence.

Gaïa thrives in bold design narratives, whether surrounded by lush greenery, brutalist lines, moody lighting, or earthy textures, it elevates everything it touches. It’s not meant to blend in. It’s meant to root the space, giving it weight and clarity. Available in a wide range of color tones and designed with full spatial freedom in mind, Gaïa adapts while remaining unmistakable.

TRAVERTINIUM *Collection*

Travertinium washbasins capture the timeless beauty of natural travertine in a way nature rarely allows, without cracks, without absorption, and without the usual headaches. These basins evoke the elegance of solid travertine blocks, yet offer the consistency and flexibility of engineered precision. Crafted in a variety of sizes and finishes, each piece brings the earthy warmth and layered texture of real stone, without the risks of porosity or fragility, and most importantly, it's always available. Whether in classic or contemporary settings, the Travertinium Collection delivers the refined presence of travertine, without the limitations.

THE TRAVOLA

Romano

Navona

Silver

Real travertine holds an undeniable charm, but it also comes with challenges. Cracks, voids, visible patching, and the limitations of carving from a solid block often add complexity and cost to the process. Siena offers an elegant solution by preserving the visual beauty of natural stone while removing the common drawbacks. Its form is clean and seamless, presenting a circular silhouette that feels timeless and carefully considered. The textured surface brings character without compromise, allowing designers to embrace the essence of travertine without the typical constraints.

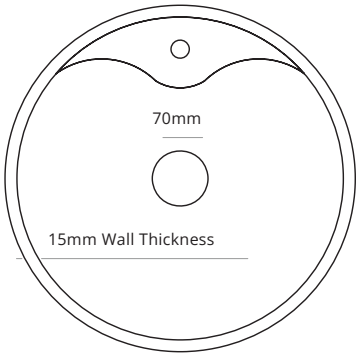

Siena's design is soft yet confident. Its subtle texture wraps gently around the basin, offering depth and dimension without demanding attention. The round shape introduces calmness to the space, softening sharp lines and harmonizing effortlessly with organic materials like wood, clay, or linen. Whether placed in a serene minimalist setting or a layered, expressive interior, Siena finds its place with ease. It complements brushed nickel, bronze, or warm-toned fixtures, becoming an anchor of quiet sophistication.

Offered in all three Travertinium colors, Siena makes the stone look accessible, repeatable, and refined. It captures warmth and calm while maintaining a sense of material honesty. For designers seeking texture, elegance, and reliability, Siena becomes a natural choice. It delivers on the brief with precision, offering the visual richness of travertine without the risks of traditional stonework. This is a basin that speaks softly but leaves a lasting impression.

Installation	Top Mount

THE TRAVOLA

Romano

Navona

Silver

Siena F is Siena, with one practical addition. It keeps the exact round silhouette, the warm travertine texture, and the same proportions as the original, but integrates a dedicated mounting spot for the faucet directly into the basin itself. The tap no longer needs room on the counter behind it; it sits on the basin, where it belongs. Nothing about the design language changes, only the way it meets the space around it.

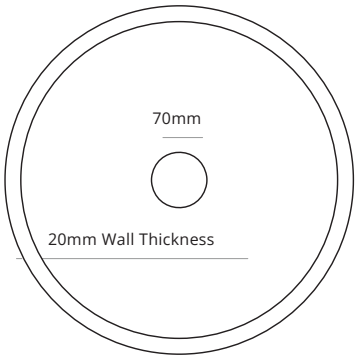

This makes Siena F the answer for narrow vanities and tight counters that simply cannot spare the width for a separately mounted faucet. Where a standard basin would force a compromise, Siena F resolves it cleanly, holding the tap, the bowl, and the stone in one confident gesture. It suits compact powder rooms, floating consoles, and slim vanity tops, pairing just as effortlessly with brushed nickel, bronze, or warm-toned fixtures as the original Siena.

Offered in all three Travertinium tones, Romano, Navona, and Silver, Siena F carries the full beauty of natural travertine without the cracking, porosity, or patching of a carved block. Every basin is finished by hand, so its texture and veining are never quite repeated. For designers working with less space but unwilling to lose the Siena look, Siena F delivers the same basin, made to fit where the original could not.

Installation	Top Mount

THE TRAVOLA

Romano

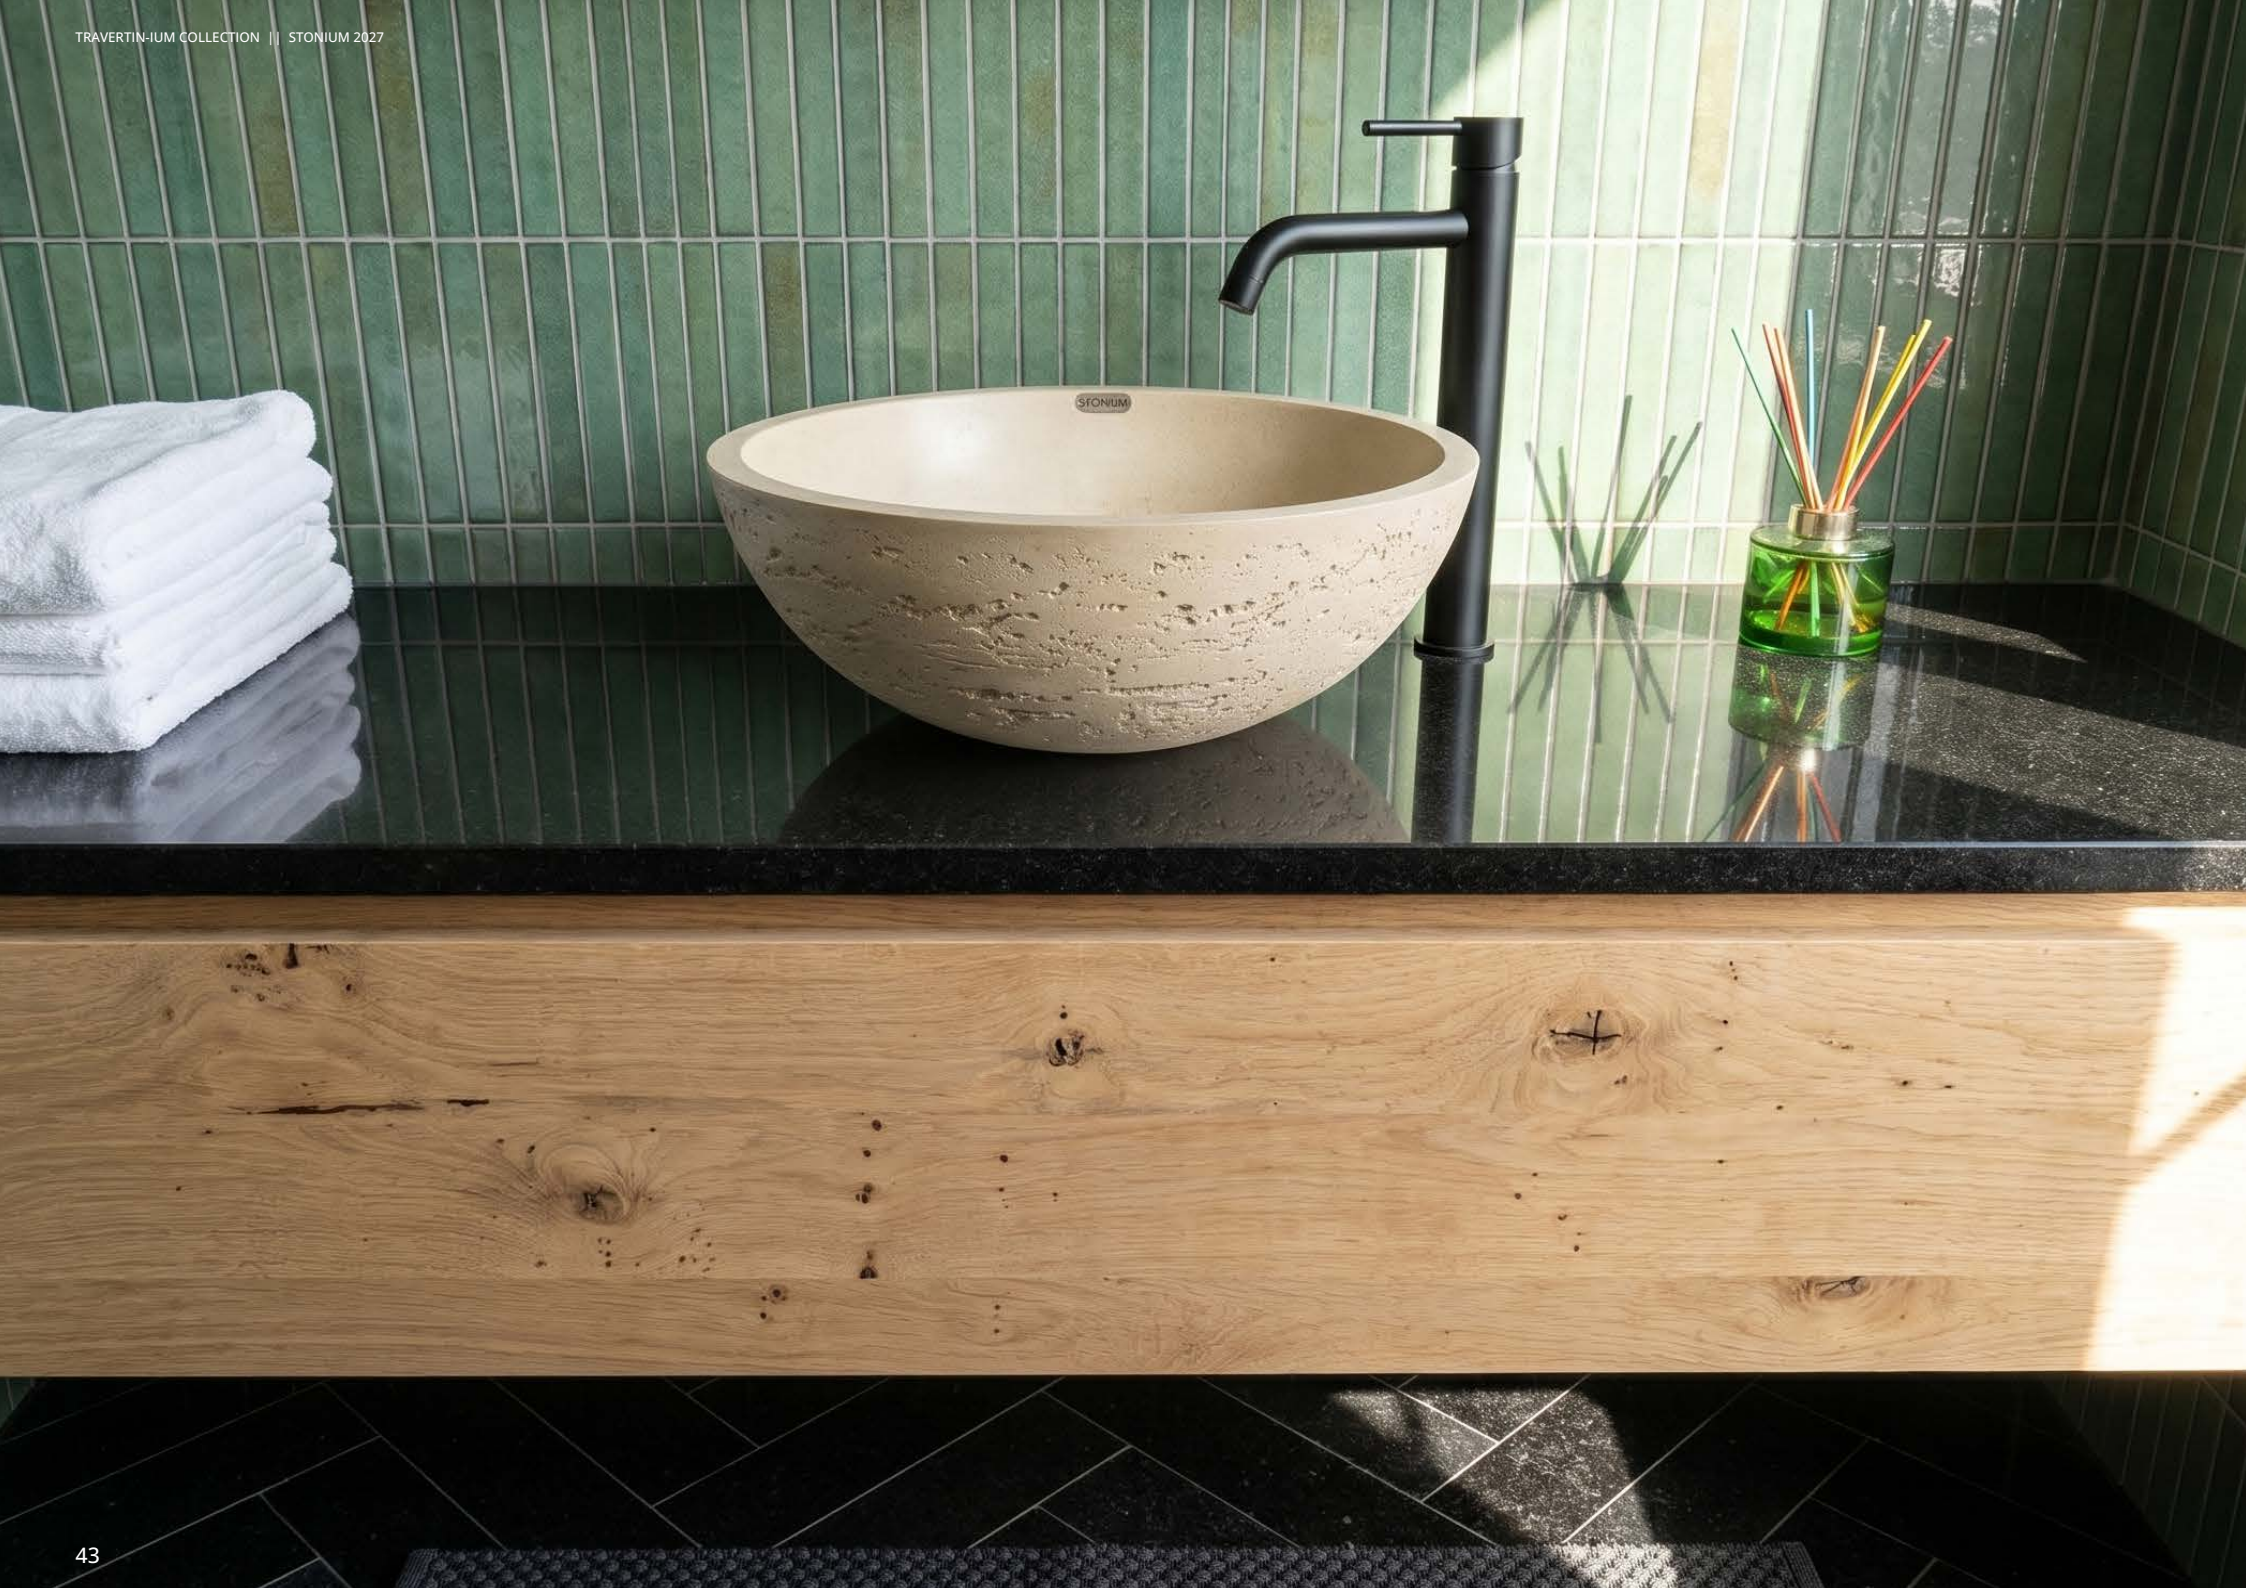

Navona

Silver

There's a moment every morning when you first reach for the water, half awake, hands finding the basin before your eyes are open. Taska is made for that moment. Its deep, rounded bowl sits low and reassuring on the counter, warm to the touch even before the tap runs, its sand-toned interior smoothed so your hands meet something soft rather than cold. The inner curvature is so smooth that the water never sounds loud as it falls, only a quiet, gentle rush that keeps mornings calm.

STONIUM

By day it changes with the light. The travertine texture across the outer bowl, its natural pitting and hollows, catches the morning sun and throws soft shadows over the vanity, then settles in the evening under warmer lamps. Guests tend to touch it before they say anything, because the pull of real stone is hard to resist.

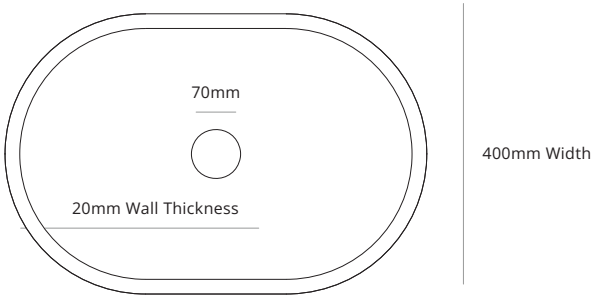

Taska comes in all three Travertinium tones, Romano, Navona, and Silver, so it settles into the room you already have, whether that is pale timber and linen or dark stone and matte black. Each basin is finished by hand and carries the full travertine texture without the cracking or patching of a carved block, its veining unrepeated from one piece to the next. Taska isn't just something you install. It's something you come home to.

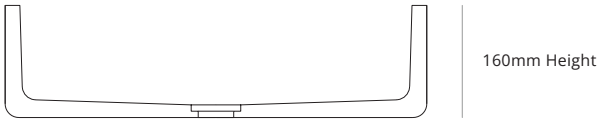

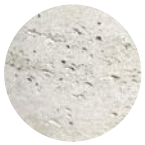

CALDA

Weight	22 kg
Size	W 400mm | L 600mm | H 160mm
Installation	Top Mount

THE TRAVOLA

Romano

Navona

Silver

Calda reimagines the Travertine basin with a longer, softer silhouette that stretches the stone’s natural texture across a calming profile. Its unique oval rectangular form subtly elongates the space it inhabits, adding visual flow without dominating the environment. With softened edges and quiet lines, Calda feels intuitive, inviting both the eye and the hand through its rich, tactile surface. The Travertine texture is allowed to breathe here, becoming the central language of calm and refinement.

Rather than competing for attention, Calda holds its place with quiet confidence. It is a design that does not rely on theatrics but instead builds its impact over time. Whether placed in a spa-like sanctuary or a bold interior with expressive materials, it adapts with understated elegance. Its extended form feels naturally at home on wide vanities and within double sink layouts, where proportion and harmony are essential. The basin becomes a grounding presence, neither ornamental nor austere, but thoughtfully poised.

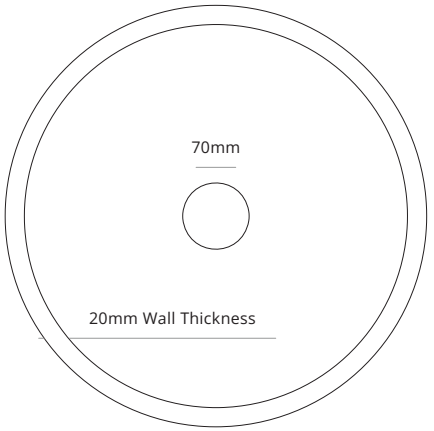

Offered in all three Travertinium tones, Calda pairs beautifully with a range of finishes and materials, from warm metallics and soft natural textures like clay tiles and brushed oak to cooler elements like pale stone. It is a basin that complements without ever competing, designed for those who value restraint as a form of sophistication. Calda brings balance, length, and a sense of calm, remaining faithful to the tactile essence of the collection while offering a refined alternative for spaces that call for subtle strength.

Silver

Travola brings the timeless texture of real travertine, its veins, tones, and layered depth, into the world of concrete. Meticulously designed, every detail echoes the organic beauty of natural stone. From the subtle linear striations to the warm, earthy hues, Travola captures the essence of travertine with uncanny precision. It’s not a surface print or artificial mimicry, it’s a material experience that feels both authentic and elevated.

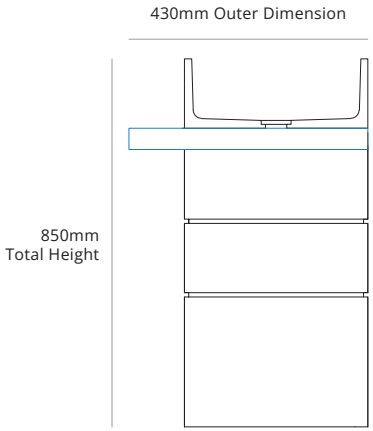

With a 30cm height, Travola makes a strong visual statement. The generous elevation enhances its sculptural quality, allowing the travertine-inspired texture to fully express itself. On the countertop, it commands attention without overpowering, making it ideal for both minimalist settings and more decorative environments. The volume is intentional, it lets the material speak louder and bolder, offering depth and dimensionality that anchors the basin within its surroundings.

Travola isn't just a functional piece, it's a grounding force in the room. It introduces a sense of quiet authority and permanence, connecting the space to nature while maintaining a refined, contemporary edge. Built from Stonium's high-performance concrete, it delivers on durability while offering designers a sophisticated alternative to natural stone. Whether paired with wood, metal, or stone, Travola invites the eye and completes the visual composition with strength and poise.

Silver

Freestanding travertine has long been considered a budget breaker, often dismissed as impossible to execute. This Travertinium cylinder proves otherwise, made possible by Stonium's signature concrete mix that achieves the look, texture, and quality of travertine with reliability and accessibility. Its form is clean and seamless, presenting a vertical silhouette that feels deliberate, proportioned, and tailored to both modern and classic spaces. Subtle vertical grooves wrap around the surface, adding rhythm and sophistication while enhancing the tactile experience.

The textured finish brings depth and richness without visual clutter, allowing designers to embrace travertine's authentic character without the compromises of natural stone. An integrated shelf in concrete extends its functionality while maintaining its sculptural integrity. The cylindrical shape is soft yet confident, introducing calm structure while grounding the space.

It harmonizes naturally with organic materials like oak, clay, linen, and brushed metal, softening sharp lines and creating balance. Whether placed in a serene minimalist environment or a richly layered, traditional interior, the cylinder adapts easily, bridging contemporary and timeless aesthetics.

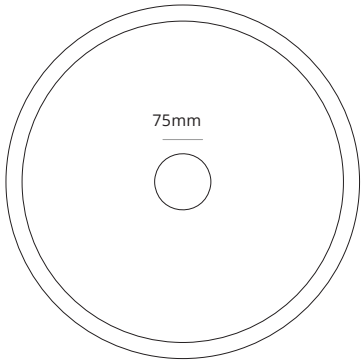

It complements brushed nickel, bronze, and warm-toned fixtures, enhancing the palette without competing for attention. Offered in all three Travertinium colors, it makes freestanding travertine realistic and repeatable, meeting budgets while preserving intent.

For designers seeking texture, elegance, and versatility in a freestanding form, this becomes the natural choice. It delivers the visual richness and honesty of stonework with precision, redefining what's possible without compromise.

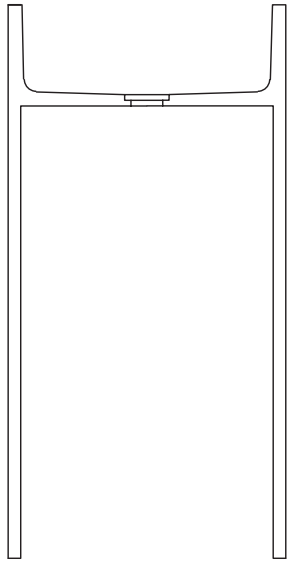

440mm Outer Diameter

88cm Height

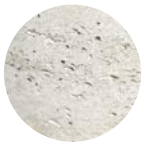

ARIA

Weight	20 kg
Size	D 440 mm | H 88cm

THE TRAVOLA

Romano

Navona

Silver

Aria brings the presence of solid travertine into a freestanding form, without the weight of its usual limitations. A single, uninterrupted cylinder rising from floor to basin, it turns the washbasin into a standing sculpture. The warm, layered travertine texture wraps the full column, its natural pitting and soft striations catching the light along the way. There is no vanity to hide behind here, only honest stone, standing on its own.

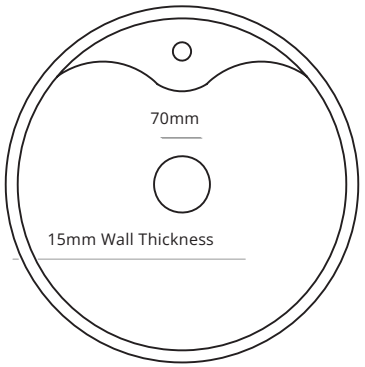

This is a piece for spaces that can give it room to breathe. Aria anchors open bathrooms, powder rooms, and wet zones where a countertop basin would feel ordinary. Paired with a wall-mounted tap, its silhouette stays clean and complete, drawing the eye from floor to rim. It sits beautifully against marble, microcement, or warm timber, and pairs effortlessly with brushed nickel, bronze, or warm-toned fixtures, becoming a quiet centerpiece rather than a background fixture.

Offered in all three Travertinium tones, Romano, Navona, and Silver, Aria delivers the full richness of natural travertine without the cracking, porosity, or cost of carving a freestanding block. Every piece is finished by hand, so its texture and veining are never quite repeated. For designers who want the drama of a standing stone basin made reliable and repeatable, Aria answers with calm, sculptural confidence.

Every piece is finished by hand, so its texture and veining are never quite repeated. For designers who want the drama of a standing stone basin without the plumbing behind it, Aria F answers with the same calm, sculptural confidence.

BRUTALIST *Collection*

The Brutalist Collection is for designers who believe concrete should never apologize for what it is. These basins are pure mass, block-like forms with raw, pitted surfaces where air pockets, exposed aggregate, and honest imperfection are left proudly on display. Inspired by monolithic architecture, they carry the weight and shadow of poured concrete without the cracking or fragility. Nothing is smoothed over, nothing is hidden. Each piece feels quarried rather than made, unapologetic and elemental. It's the choice when a space demands strength, presence, and the beauty of the unrefined.

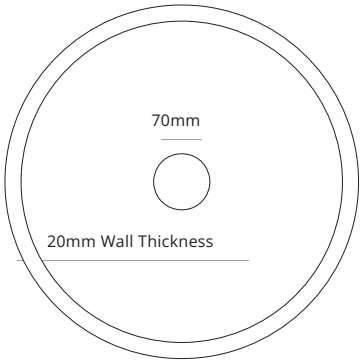

ORBIS 67
NOCTRA 71

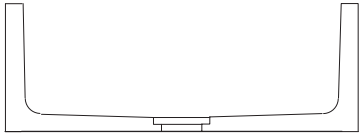

440mm Outer Diameter

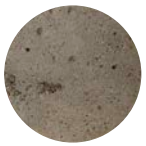

160mm Height

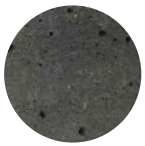

ORBIS

Weight	16.5 kg
Size	D 440 mm | H 160mm
Installation	Top Mount

THE TRAVOLA

Wabi

Sabi

Some basins are shaped. Orbis is quarried. A solid drum of raw concrete, it holds its circle with the blunt confidence of a stone pulled straight from the earth. The surface is pitted and cratered, marked with open air pockets and mineral flecks that most makers would smooth away. Orbis keeps them. Against the weight of its outer wall, the inner bowl runs clean and calm, a quiet center inside all that mass.

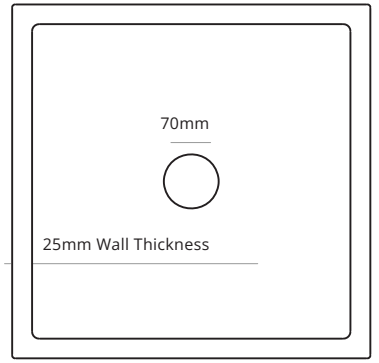

Orbis is made for interiors that aren't afraid of weight. It grounds a marble vanity, sharpens timber and linen, and anchors the raw palettes of brutalist, industrial, and wabi-inspired spaces. Pair it with brushed steel, gunmetal, or aged brass, and its texture only deepens. Offered in Wabi, a pale mineral grey, and Sabi, a dark volcanic charcoal, it can settle quietly into a scheme or command the room, without ever losing its elemental voice.

Cast from Stonium's high-performance concrete and sealed inside and out, Orbis carries the look of hewn stone without the cracking, porosity, or fragility. Each piece is finished by hand, so the craters, speckles, and tonal shifts are never quite the same twice. Blunt, grounded, and unapologetically honest, Orbis doesn't decorate a space. It weighs it down, in the best way.

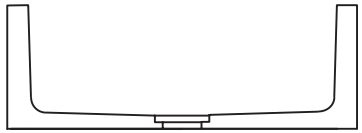

450mm Outer Diameter

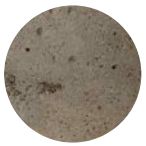

160mm Height

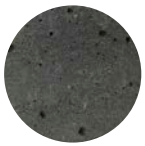

NOCTRA

Weight	24 kg
Size	D 450 mm | H 160mm
Installation	Top Mount

THE TRAVOLA

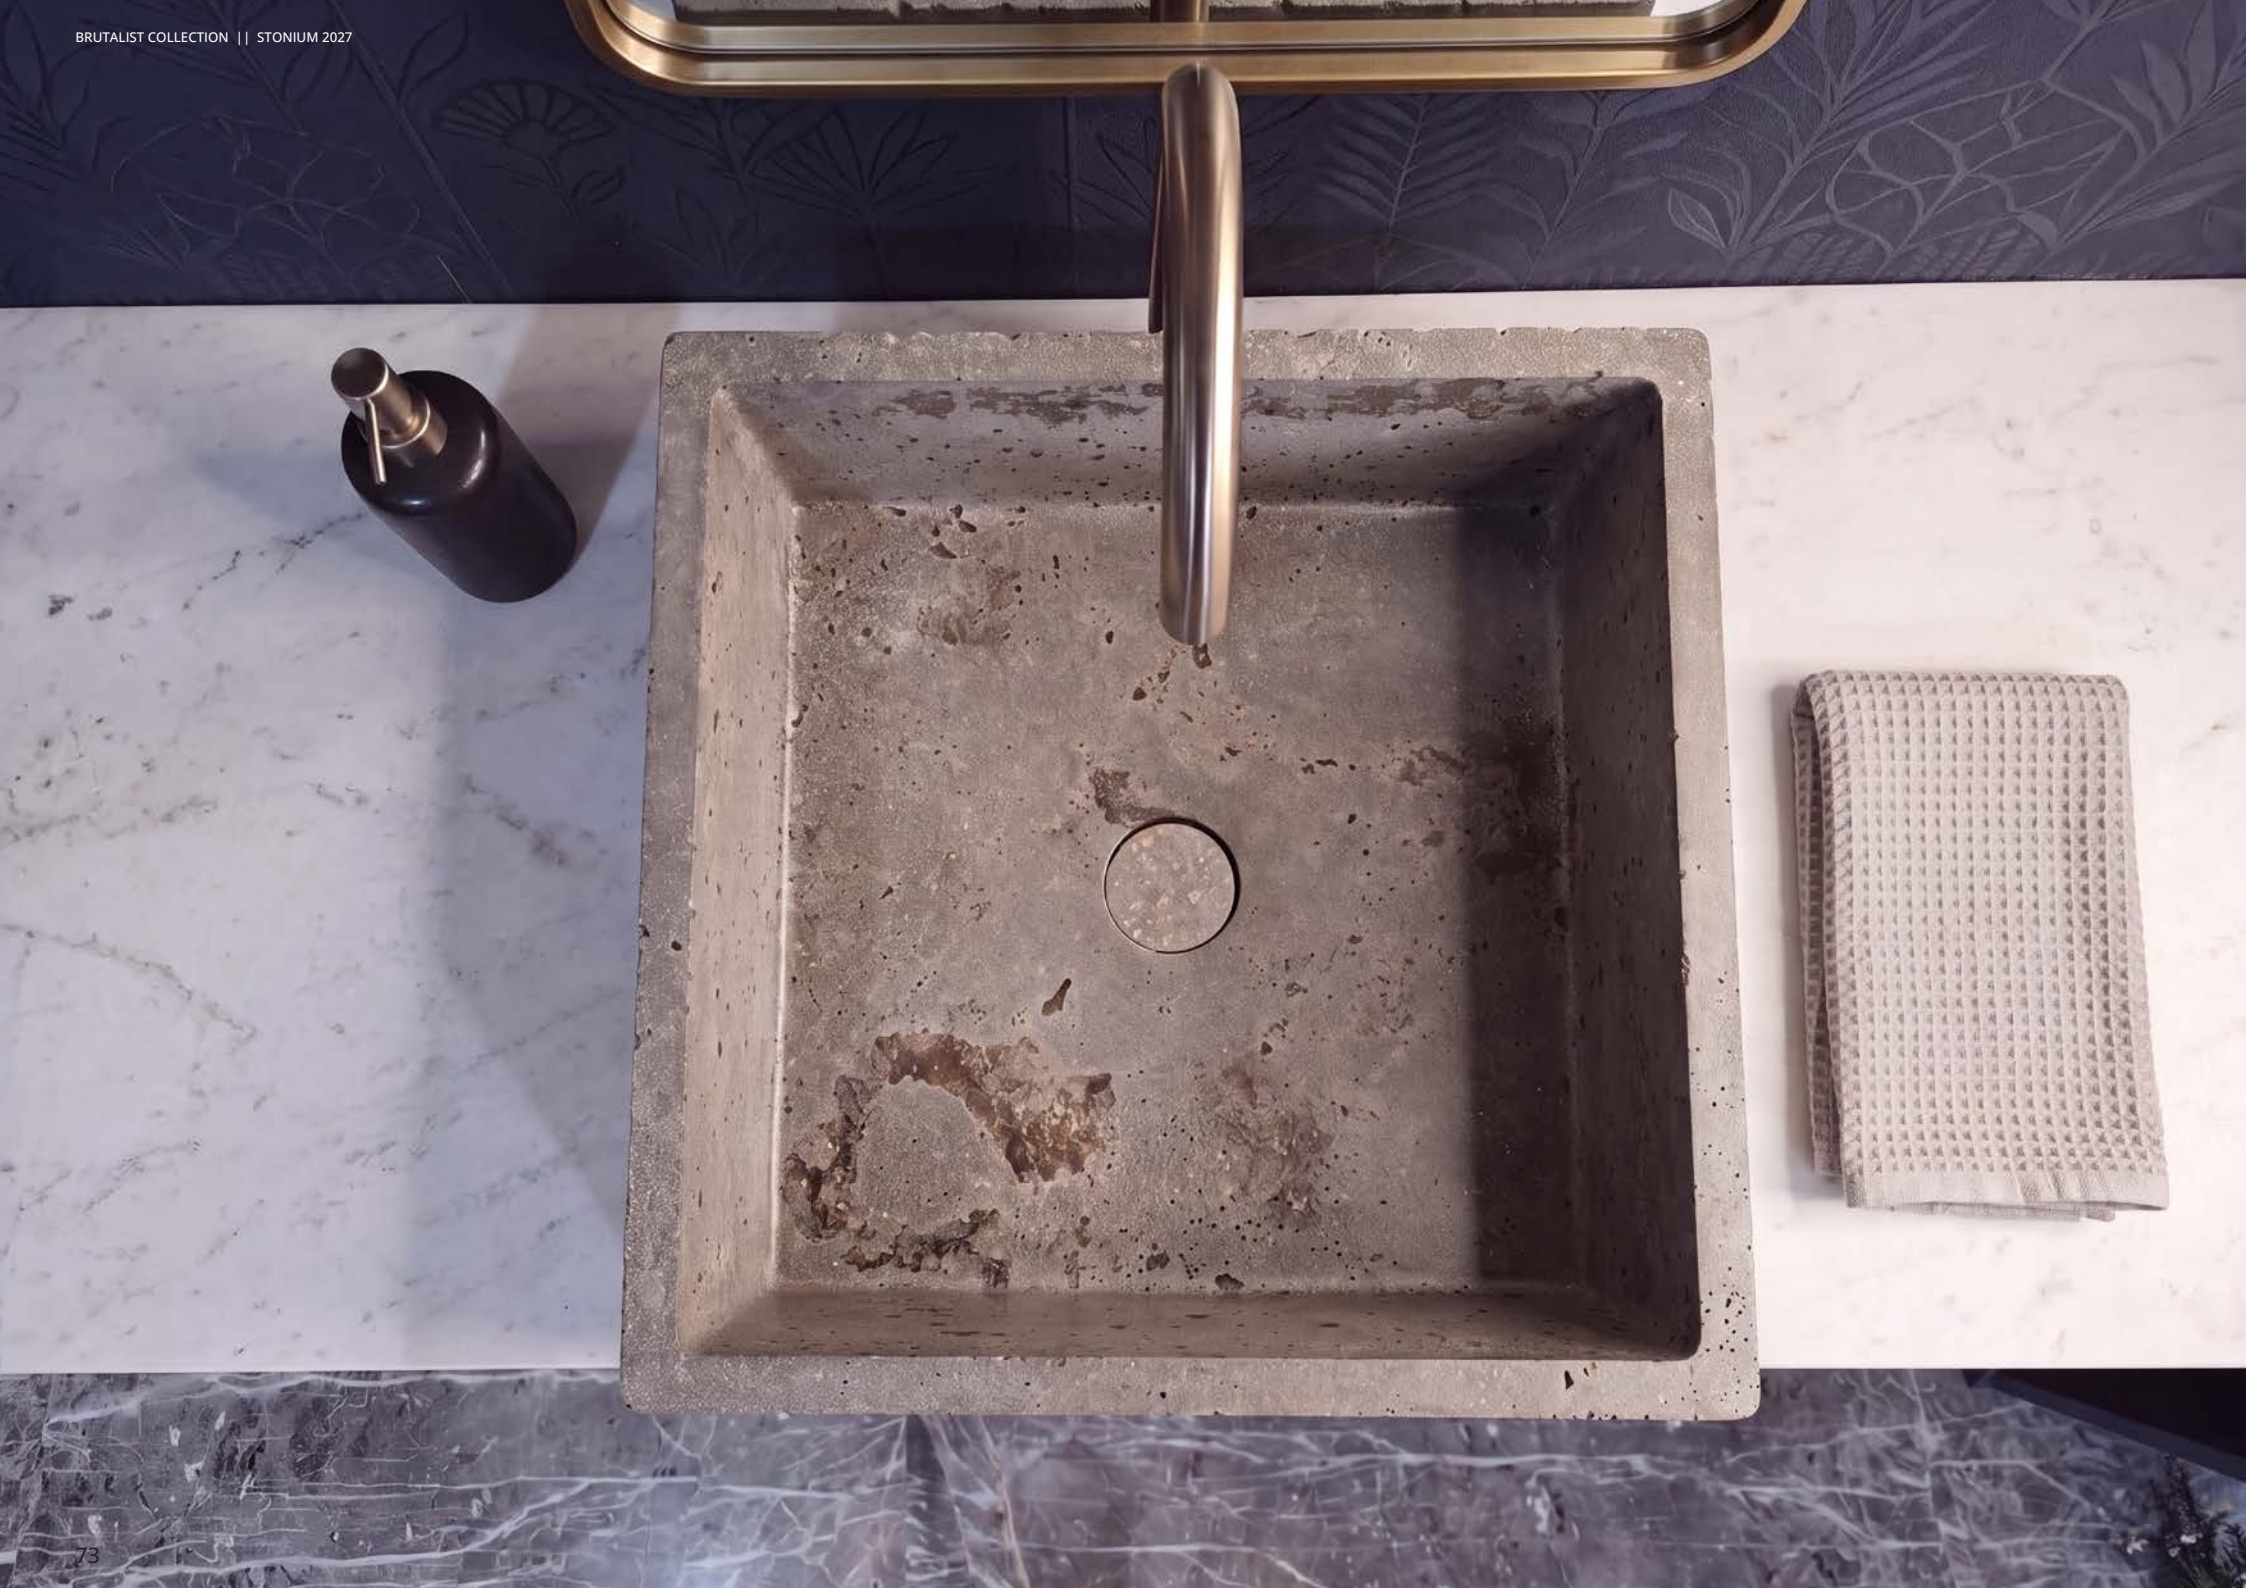

Wabi

Sabi

Noctra doesn't soften anything. A deep rectangular trough cast in solid concrete, it carries the presence of a stone basin recovered from an old workshop, straight-walled, heavy, and utterly unbothered. Its surface is dense with air pockets and streaked with natural mineral oxides that bleed rust and shadow across the face. The interior stays functional and smooth, but the exterior tells the whole story: raw, weathered, and proudly imperfect.

This is a basin for rooms with conviction. Noctra grounds industrial lofts, brutalist bathrooms, and heritage interiors where old and raw are meant to meet. Its long form spans wide vanities and reclaimed timber consoles with ease, pairing beautifully with chrome, blackened steel, or vintage cross-handle taps. Offered in Wabi, a pale mineral grey, and Sabi, a deep charcoal, it can read as rugged farmhouse or hard-edged modern, shifting character with its tone while holding its weight.

Built from Stonium's high-performance concrete and sealed throughout, Noctra keeps the rugged soul of aged stone without the leaching, cracking, or upkeep. Every oxide streak and open pocket is finished by hand, making each basin a genuine one-off. Noctra isn't styled to please. It's built to last, and to remind the room that concrete was here first.

DESIGNERS *Collection*

Every basin in the Designer's Collection is crafted with a clear stylistic intent. These aren't neutral forms, they're bold interpretations of specific design languages. One might echo the rhythm of Arabesque architecture, another the raw strength of brutalism, or the elegance of sculpted modernism. The silhouettes are strong, the presence undeniable, and the function never gets in the way of expression. These are pieces that set the tone for the entire room, anchoring the palette, guiding the material choices, and sparking conversation. They're not designed to follow trends, but to embody a point of view.

TERRAZZO SERIES

Terra White | Terra Black

There are basins that simply serve a function, and then there are basins that tell a story. This piece does both, but it begins with narrative. Inspired by centuries-old Arabesque motifs, the design has been reinterpreted through a contemporary lens, balancing clean asymmetry with sculptural depth. The carved surface is not just decorative, it plays with light and shadow throughout the day, constantly shifting and evolving as the environment around it changes. Its silhouette features a gentle tilt that brings subtle movement and life to what is usually considered a static object. For designers seeking a centerpiece that speaks of heritage while feeling entirely current, this piece offers a rare and thoughtful balance.

Whether placed in a powder room with bold marble or surrounded by minimalist, tonal layers, the basin holds its ground with quiet confidence. It adds texture and cultural richness without overpowering the space. Customizable in any Stonium tone, it adapts to a range of aesthetics, from warm terracottas and moody hues to soft pastels, allowing it to reflect regional styles or design intent with ease.

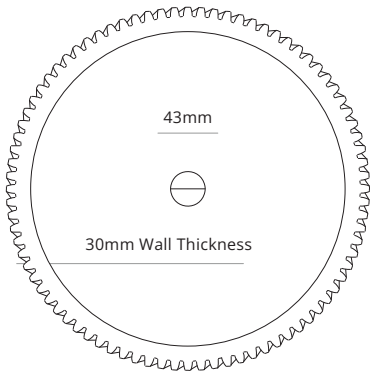

Ideal for Mediterranean-inspired spaces, layered maximalism, or bold modern interiors, this piece brings warmth and craft to even the most structured environments. Its form feels artisanal and emotionally resonant, yet it’s produced with precision to ensure lasting quality. More than a basin, it’s a sculptural gesture, a moment of pause, of beauty, and of connection between past and present.

The Volto basin takes everything that defines the Gear design and expands it with greater scale, presence, and impact. It maintains the same industrial rhythm through sculpted ridges that catch and reflect light beautifully, but these details are now expressed across a taller and wider format. The result is a basin that feels substantial, both visually and physically. Volto anchors the bathroom with a strong sense of gravity, creating a natural focal point. Designed to sit directly on the countertop, it introduces architectural boldness without overpowering the space.

Its strong exterior is paired with a smooth, curved interior bowl that softens the overall effect, making it not only striking to look at but also pleasant to use. Volto complements a variety of settings, from boutique hotels to modern lofts, and brings character wherever placed. Aged brass taps add warmth and heritage, while matte black fixtures enhance its modern edge. Whether featured as a single centerpiece or in a double arrangement, the basin commands attention while maintaining balance and usability.

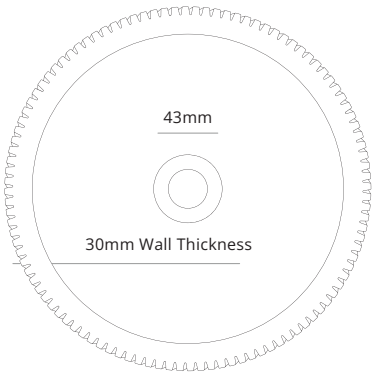

Available in the complete Stonium palette, Volto adapts to a wide range of color stories, from muted cool tones to deep, expressive hues. It is a basin with scale, clarity, and a distinct voice. For designers looking to make a confident statement with refined materiality, Volto offers a bold yet considered choice. It brings together form and function in a way that feels purposeful, sculptural, and grounded in design integrity.

The Gear basin breaks away from the ordinary, embracing industrial expression with a sculptural twist. Its bold, ridged exterior recalls the mechanical precision of a gear, creating a tactile rhythm that energizes any bathroom setting. Designed to sit proudly on the countertop, it anchors the vanity with unapologetic confidence and unmistakable character.

This model invites bold combinations, brushed brass fixtures for a steampunk vibe, or matte black taps for a sharper, urban-industrial look. It thrives in loft-style renovations, boutique hospitality spaces, and expressive residential interiors where form and function intersect. Whether used as a solo statement or mirrored in a double layout, Gear adapts easily to both compact bathrooms and expansive designs. The smooth, soft-edged inner bowl contrasts the rugged exterior, offering comfort and refinement.

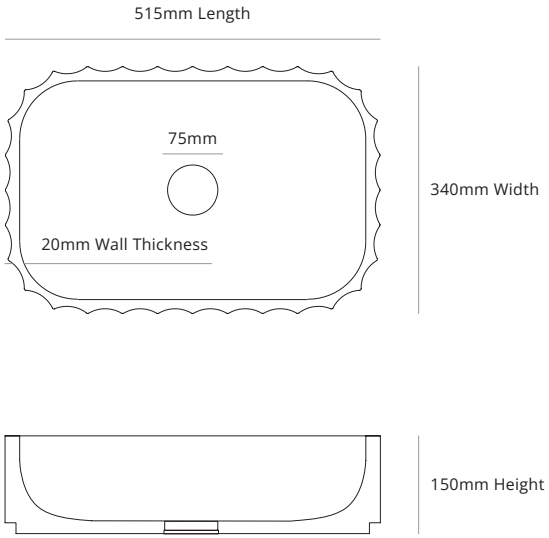

Available in the full Stonium palette, Gear shifts easily from raw neutrals to rich tones, aligning with minimalist or expressive styling alike. It's more than a basin, it's a statement of intent for designers who embrace bold materiality and aren't afraid to push boundaries.

Fluto is where rhythm meets refinement. With its vertical fluted exterior, this over-counter basin channels the elegance of classical architecture into a modern context. The grooves are not just decorative, they play with light throughout the day, casting subtle shadows that bring movement and texture to the vanity. Fluto's presence is deliberate and sculptural, offering expression without excess.

Its soft rectangular silhouette with rounded corners gives it broad versatility. Whether placed in a compact powder room or a spacious master suite, Fluto maintains balance and proportion with ease. It blends seamlessly into contemporary Mediterranean, transitional, or modern neoclassical interiors, acting as a soft contrast to minimalist concrete, a complement to warm oak, or a statement against bold wallpapers and stones.

Available in the full Stonium palette, Fluto invites customization through calming neutrals, saturated hues, or stone-effect finishes. It supports various faucet configurations, pairing beautifully with both wall-mounted and tall deck-mounted spouts. More than just form, Fluto brings texture and quiet order to the space, turning a functional piece into a refined focal point. For designers who value balance, tactility, and timeless harmony, Fluto offers a softly spoken yet lasting impression.

TERRANOVA *Collection*

A perfect marriage between concrete and marble, structured, raw, and undeniably refined. These basins are carved to reveal embedded marble fragments, creating surfaces where rough texture and polished detail interact with purpose. The result isn't just decorative, it's a lead element. In brutalist, industrial, or contemporary interiors, this is the kind of piece that anchors the entire bathroom concept. The palette, materials, and mood often build around it, not the other way around. Geometry remains tight and modern, while the inner composition brings unpredictability and depth. It's a basin with presence, strong, sculptural, and impossible to treat as background.

THE GALÉO

Orlena

Lunara

Ceppo

Galéo is not a reinterpretation of terrazzo, it’s a reinvention. More sculpture than surface, this basin is carved, not just cast, with marble fragments that flow seamlessly over the edges and into the inner walls. Every angle reveals a new detail, proving that this is not a decorative finish but a fully three-dimensional object designed to be seen, touched, and remembered.

Blending concrete with marble, Galéo carries both visual weight and physical presence. Its oversized silhouette, bold edges, and expressive texture make it ideal for standout spaces, boutique hotels, dramatic powder rooms, or curated residences. Designers can go beyond the standard Stonium palette, specifying custom tones to align with the exact mood or material story of their project.

Galéo adapts to a wide range of design languages while never fading into the background. It pairs effortlessly with rich wood, brushed metal, or dark stone, and shifts tone depending on color, playful, understated, or commanding. This is a basin that leads the space. Confident, intentional, and artistically forceful, Galéo is more than a fixture, it's the centerpiece.

STUDIO *Collection*

Clean lines, balanced proportions, and a quiet presence, that's what defines the Studio Collection. These basins are designed with intention, allowing surrounding materials and forms to breathe while maintaining their own distinct character. They work effortlessly in minimalist spaces, yet hold their own in layered, eclectic interiors. There's a clarity to the geometry, a thoughtfulness in every curve, and a focus on function without sacrificing elegance. It's the kind of design that doesn't demand attention, but rewards it.

TERRAZZO SERIES

Terra White | Terra Black

Rondo is where simplicity becomes intentional. With its clean, continuous curvature, this basin serves as a soft counterbalance to linear or architectural bathroom schemes. Its geometry is pure. It is a true circle, creating a sense of calm and control in any interior. The proportions are studied, not improvised, giving it a presence without demanding attention. We often find that round basins like Rondo bring softness to rigid spatial compositions. It works beautifully with floating vanities, timber consoles, or monolithic counters in stone or terrazzo. The inner chamfer adds a subtle depth, guiding the eye and water flow naturally toward the drain. Every line is resolved.

SOAP

Designers who lean toward Japandi, organic minimalism, or soft contemporary styles will recognize Rondo's adaptability. Its form pairs effortlessly with brushed nickel, aged brass, or matte black fixtures. Whether set into concrete, wood, or marble, Rondo doesn't compete, it completes. This basin is not here to shout. It's here to hold space, quietly and elegantly. We chose a palette of natural pigments that allow Rondo to take on an entirely different identity depending on its color. In pastel tones, it's playful. In the dark, it becomes sculptural.

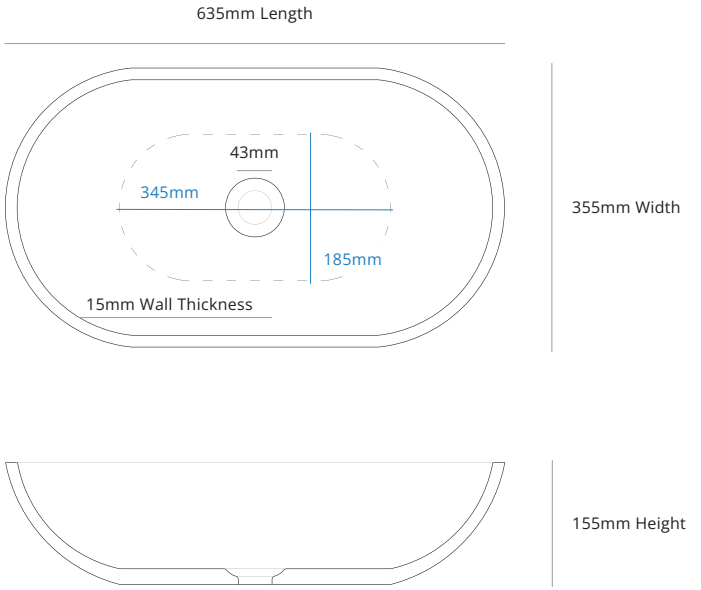

Its height gives it presence, but the softened lip makes it approachable. The finish is tactile, inviting the hand to make contact. And for small bathrooms or powder rooms, it becomes the single gesture that holds the whole concept together. In a room where every material matters, Rondo is the element that ties it all back to intention. Not just a basin, Rondo is a moment of stillness in the middle of design.

Soft geometry meets confident presence in the Eggie basin. Its elongated oval form offers a gentle visual rhythm, ideal for vanities seeking a balance between functionality and a meaningful design statement. The silhouette of Eggie takes cues from biomorphic forms. It is calm, continuous, and organically sculpted, bringing a quiet and grounding energy into the bathroom. The subtly tapered walls help soften its overall footprint, making Eggie a versatile choice for compact settings as well as wider countertops where symmetry and proportion play an important role. Its contours feel delicate but intentional, with a form that encourages balance without losing visual clarity.

Its over-counter installation feels intentional and integrated. Eggie complements rounded mirrors, soft-edged cabinetry, and brushed metal fittings with ease. Ideal for warm minimalism or Scandinavian styles, its form supports fluidity and softness while maintaining visual clarity.

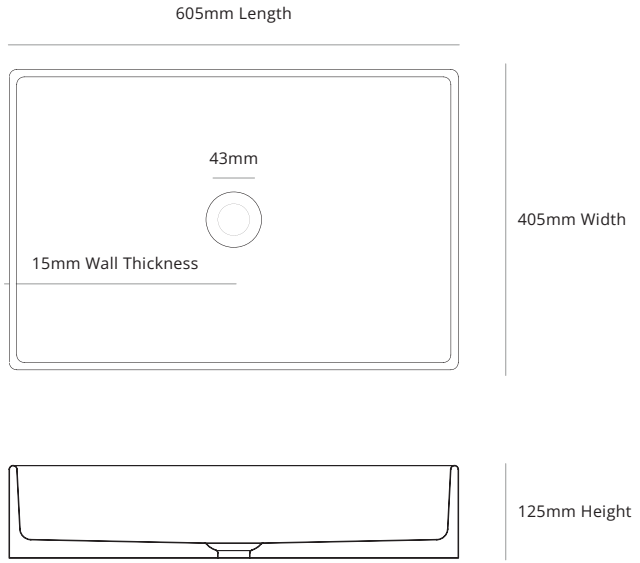

Available in the full Stonium palette, Eggie adapts to any interior mood. Muted tones offer quiet elegance, while bolder hues make it a focal point. With its velvety matte finish and sculptural silhouette, Eggie brings both simplicity and substance to modern bathroom design.

TERRAZZO SERIES

Terra White | Terra Black

The Recta basin is defined by clean lines and architectural clarity, making it an ideal feature for minimalist interiors or bold, contrasting spaces. Its rectangular shape, softened by rounded corners, balances structure and ease. Whether wall-mounted for a floating effect or set on a black steel frame for an industrial edge, Recta adapts to both compact urban bathrooms and elegant powder rooms, pairing seamlessly with metal fixtures, structured lighting, or warm materials like wood and matte tiles.

Versatile in style, Recta complements Scandinavian minimalism, Bauhaus-inspired layouts, and eclectic interiors alike. It serves as a grounding element in visually dynamic spaces, especially for designers who enjoy playing with contrast, matte vs. gloss, raw vs. refined. Available in all Stonium color options, its finish can either make a bold sculptural statement or dissolve gently into lighter, airy palettes, holding its own in both monochrome and richly patterned environments.

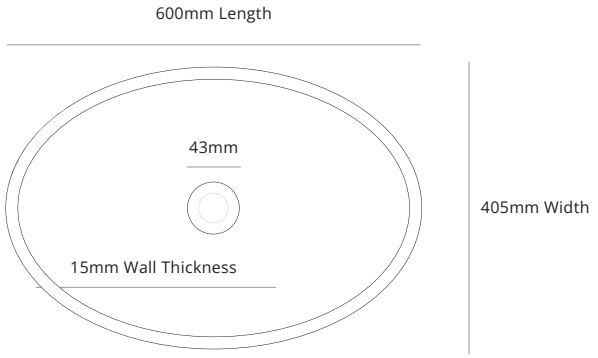

In commercial settings like boutique hotels or stylish restaurants, Recta offers durability without sacrificing design. At home, it becomes a quiet focal point, especially when echoed in cabinetry or architectural details. Its multiple installation options make it a flexible design tool, allowing it to support the overall visual hierarchy of a space. Rather than demanding attention, Recta subtly commands it, bringing structure, calm, and just the right amount of presence.

Ellipse is a study in softness and balance. Its elongated oval form breaks away from symmetry without disrupting harmony. The low-slung profile feels sculptural yet approachable, inviting touch and daily use. It sits delicately on the countertop, offering volume without height, an intentional contrast to sharp-edged bathrooms. This basin is designed for rhythm and flow, echoing organic gestures found in nature. Its generous surface width makes it an ideal choice for side-by-side installations, master vanities, or hospitality applications. The softness of its curvature enhances serenity in modern bathrooms, blending beautifully with stone, terrazzo, or smooth lacquered finishes.

STONIUM

Ellipse thrives in calm environments but can also energize bold ones, depending on the selected tone. With access to the full Stonium palette, designers can tailor the basin from quiet neutrals to expressive hues, matching, contrasting, or accenting material schemes. The model shown here in a muted pink is a nod to soft contemporary trends, but equally compelling in off-black or earthy rust. It's an ideal basin for those designing with mood and proportion in mind. It feels at home in wellness spaces, boutique hotels, and residential retreats where form is driven by feeling.

The visual weight is minimal, but the presence is strong, making it a basin that quietly commands attention. Its rounded geometry also supports practical benefits, like splash control and ease of maintenance. Ellipse is where functionality and emotional design meet. It's a piece that doesn't just sit on a vanity, it enhances the overall atmosphere.

TERRAZZO SERIES

Terra White · Terra Black

Minium is proof that scale does not define impact. It’s the most compact basin in the Basic Collection, yet it delivers presence through proportion and balance. Designed for spatial efficiency, Minium answers the call for smaller footprints without sacrificing design intent. Its oval form lends a sense of movement and fluidity to surfaces that are often rigid. It works particularly well in tight residential bathrooms, commercial restrooms, or hospitality spaces where design must coexist with limitation. The softened inner profile enhances water flow and function, while the outer lines remain crisp and modern.

STONIUM

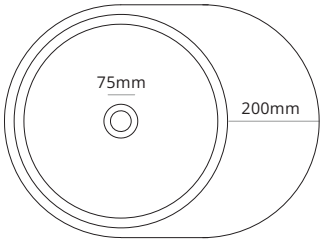

With its low visual weight, Minium pairs beautifully with floating consoles, slim metal frames, or built-in surfaces. It brings clarity to small spaces, acting as a refined focal point rather than an afterthought. Offered in our full Stonium color palette, Minium can shift dramatically in tone, from a quiet, architectural presence in muted greys, to a playful accent in pastels, or a bold contrast in charcoal or clay. It's this flexibility that makes it ideal for curated interiors where every color choice is intentional.

Whether the concept is minimal, expressive, rustic, or experimental, Minium meets it without resistance. It invites material contrast, whether in brass, oak, travertine, or matte finishes, without stealing attention. The basin's profile allows for easy integration into both wall-mounted and counter-mounted applications. Minium is not just a space-saver, it's a design tool for precise, intelligent detailing. It's for projects that require restraint, but demand refinement. When working with tight parameters, Minium lets you deliver beauty without compromise.

EARHTONE SERIES

White | Beige BD | Brown WD | L-Grey | D-Grey | Black WD

PASTEL SERIES

Flamingo | Terracota | Peach | Banane | Mint | Smoke Blue | Azul

In spaces where visual clarity matters, a cylindrical shape like this speaks volumes. Silendro’s full-height geometry becomes an architectural gesture, clean, grounded, and quietly commanding. Its presence creates a sense of intention in the room, standing not just as a basin, but as a spatial statement. The monolithic silhouette works beautifully in minimalist bathrooms but also adds composure in more layered, eclectic schemes. Its verticality plays well against textured surfaces, sculptural mirrors, or bold wall finishes, creating contrast without visual clutter.

Without the shelf, Silendro reads as a sculptural column, solid, deliberate, and pure. Add the shelf, and it brings subtle utility without compromising its clean form. Available in concrete, marble, or steel, the shelf allows designers to fine-tune the material palette or create a seamless monolithic look by matching it to the basin. Whether paired with earth tones, pastels, or terrazzo, Silendro adapts while maintaining its distinct identity.

Silendro is not trying to be clever. It's an honest, intentional form, one that allows its surroundings to shine while quietly elevating them. It carries the kind of presence that feels earned, not forced. Select the basin from the full Stonium palette or request a custom tone to better match the space's vibe or visual mood. When the context is right, this piece anchors the bathroom with clarity, confidence, and an elegant sense of restraint.

INSPIRATIONAL MOMENT

TERRACOTTA

Soft brutalism meets earthy minimalism in a space built on contrast and calm. The burgundy wall sets the tone, balanced by pale oak cabinetry. Burgundy-veined marble echoes the wall, while brushed brass adds structure. Dry botanicals and clay support the material story. Matte finishes maintain atmosphere. The Terracotta washbasin aligns with the marble tones.

SMOKE BLUE

Scraped pink plaster brings movement and imperfection into the space. The surface feels handmade, setting the tone for a room built on texture. Matte black fixtures add sharpness, while cane, rattan, and ceramic continue the crafted story. The deep black floor grounds the palette. The Smoke Blue washbasin introduces a cool, contrasting counterpoint.

BROWN WD

Travertine tiles, sunlit wood, and brushed bronze define a space rooted in warmth and texture. Stone variation adds depth, while ribbed wood introduces subtle movement. Brass fixtures complement the palette, and the curved vanity softens the geometry. A terracotta planter with an olive tree adds an organic element. Brown WD bridges the wood, tiles, and accessories.

TERRA WHITE

Charcoal leathered tile, poured concrete, and rich walnut cabinetry create an industrial mood softened by craft. Dark surfaces add weight, while timber warms the room and black details keep it sharp. Folded grey towels and marbled soaps add comfort. Terra White becomes the light, its creamy surface with dark flecks echoing concrete and stone.

MINT

Glossy mint tiles, soft white marble, and pale oak cabinetry create a light, refreshing composition. The green adds clean energy, while marble grounds it with classic texture. Natural oak warms the space without heaviness. White fixtures and towels keep it bright. The Mint basin echoes the tile, reinforcing the central color story and surrounding finishes.

FLAMINGO

Soft pastel green cabinetry sets a gentle, airy tone throughout the space. Its freshness pairs with soft grey marble veining, creating a calm, expressive backdrop. The Flamingo basin introduces tender contrast, letting pink sit elegantly against green. Chrome details and subtle accessories keep the look polished. The washbasin brings charm, femininity, and quiet confidence.

INSPIRATIONAL MOMENT

PEACH

Biophilia drives the composition, with a living wall wrapping the corner in layered foliage, grounded by terrazzo's playful, tactile aggregate. Chrome adds a cool, reflective counterpoint, balancing the organic sprawl. Mint details extend the material story. Peach introduces warmth, its fluted body catching light rhythmically, creating a considered, confident contrast against the green.

AZUL

Glossy white tiles, warm oak cabinetry, and polished chrome fixtures create a clean, timeless backdrop. Blue towels and natural light add freshness, while subtle textures bring warmth. The Azul Daring basin echoes the blue accents, introducing a cool, coastal feeling. Its color adds clarity without disrupting the room's calm, balanced character.

BANANE

Dark wood, matte black fixtures, and deep marble tones create a rich, moody atmosphere. Chevron wall cladding adds movement, while the countertop reinforces depth. Yellow floral accents and towel embroidery bring controlled brightness. The Banane basin picks up the yellow notes, contrasting the dark surroundings with energy while keeping the space curated.

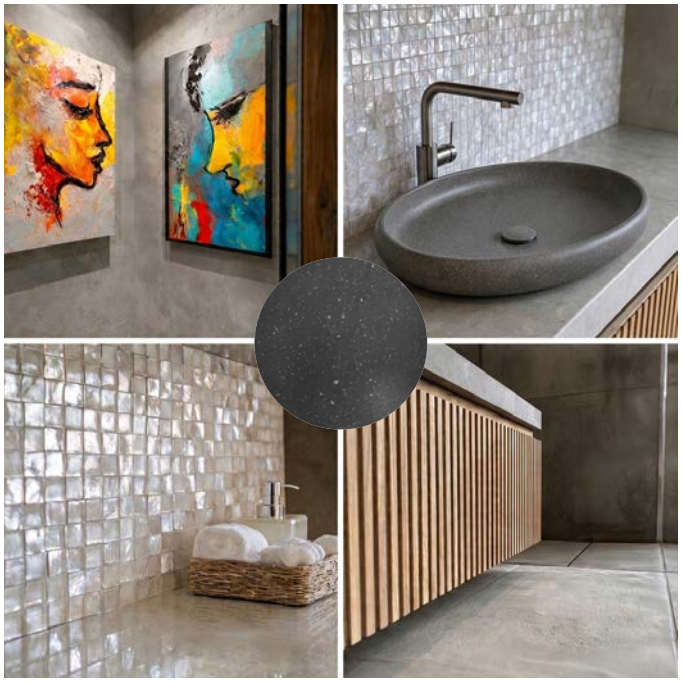

BEIGE BD

Riven slate walls, brushed steel fixtures, and raw wood accents create a cool, architectural space. Dark stone sets the tone, while the live-edge shelf and oak flooring add warmth. Dried botanicals, jute, and neutral linens keep the palette tactile. Beige BD lightens the scheme, softening the contrast while lifting the darker materials and maintaining a calm, refined atmosphere.

BLACK WD

Dark plaster walls, deep red marble, and ribbed burgundy textures create a space with weight and drama. The stone's veining adds movement, while brushed bronze fixtures bring warmth. Ribbed detailing adds depth and repetition. Matte black accessories reinforce the quiet luxury. Black WD washbasin creates visual continuity, anchoring the marble and bronze with intensity and sculptural presence.

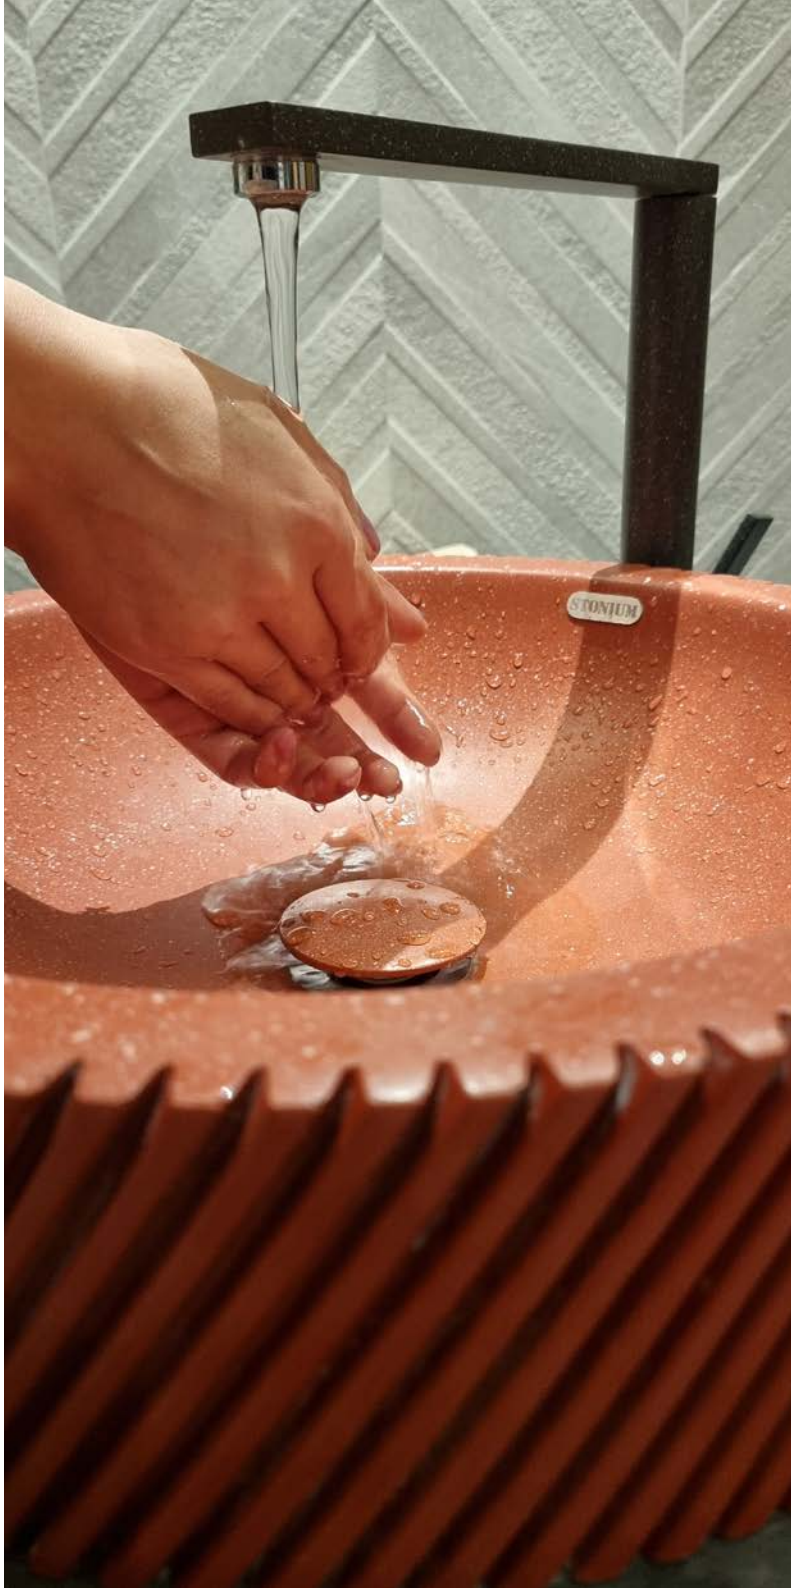

D-GREY

Mother-of-pearl mosaics, concrete walls, and ribbed oak cabinetry blend softness with edge. The tiles catch light, offsetting the raw concrete finish, while bright artwork adds color. Stainless steel fixtures keep the palette cool and reflective. D-Grey for the washbasin responds to the concrete, balancing reflective surfaces with a tone between rough and refined.

DRAINS

Unlike conventional drains available on the market, the Stonium pop-up drain is thoughtfully engineered to complement your washbasin not just in function, but in form. Its seamless integration and premium finish elevate the entire look of the basin, adding a layer of sophistication that most standard drains simply cannot offer. With its sleek design and flawless compatibility, the Stonium pop-up drain transforms a simple utility into a statement piece, bringing elegance, precision, and a heightened sense of luxury to your bathroom space.

MY STONIUM CARE GUIDE

Stonium washbasins are crafted with premium materials designed to elevate any space with elegance and durability. To preserve their appearance and ensure long-lasting performance, please follow the recommended care guidelines below:

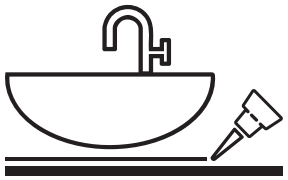

HOW TO PROTECT

USE SOFT NON-ABRASIVES SPONGES
Gentle cleaning is best.

FOR RESIDENTIAL/ COMMERCIAL
Meant for residential or commercial environments.

USE NEUTRAL CURE SILICON
Apply in a continuous, unbroken line.

USE MILD DISH SOAP
Use pH-neutral products like mild dish soap and gentle surface cleaners.

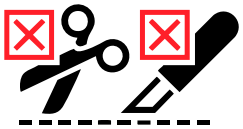

USE CLEANING CLOTHS
Wipe spills after use to prevent residues from leaving surface stains.

WHAT TO AVOID

NO DIRTY DISHWASHING
Not for greasy or food-heavy cleaning.

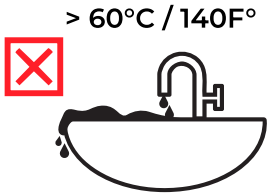

NO SHARP TOOLS
Prevent scratches and damage.

NO OILS OR PAINTS
Can stain or degrade the material.

NO ACIDS OR SOLVENTS
Harsh chemicals will corrode the surface.

AVOID SOAKING ABOVE 60°C / 140F°
Heat may weaken or stain the surface.

PRODUCTION

INNOVATION AND QUALITY

• Our dedicated R&D team constantly focuses on developing new products and new designs that meet the evolving needs of our customers.

• We are constantly exploring new materials, collaborating with designers, and manufacturing techniques to enhance the quality and aesthetic of our offerings.

EXCEPTIONAL MOLDING TECHNOLOGY

• Unique Modeling Process > Sculpted with precision using a proprietary process that defines sharp architectural designs.

• Showcasing Design Details > Every curve and edge reveals the craftsmanship behind Stonium's expressive detailing.

• In-House Design and Mold Creation > Molds are fully developed in-house to protect design integrity and creative freedom.

WITHSTANDING HIGH WATER TEMPERATURES

• Enhanced with Fibers and Polymers > Structural additives ensure zero deformation under extreme thermal conditions.

• Superior Heat Tolerance > Designed for daily exposure to hot water, without a single sign of stress.

• Maintained Aesthetic Quality > Even under heat, the finish remains flawless, with no fade or texture loss.

ADVANCED SURFACE TREATMENT

• Protective Barrier: Breathable layer shields against time, stains, and daily use.
• Silky Surface: Soft, matte finish that feels refined to the touch.
• Chemical-Resistant: Withstands bleach and cleaning agents without losing elegance.

SUPERIOR DESIGN MIX

• Exceeding Laboratory Standards > Engineered beyond lab standards to meet the demands of luxury architectural spaces.

• Near Zero Absorption Percentage > Formulated to reject moisture entirely, keeping surfaces dry, clean, and protected.

• Impressive 60 MPA Compressive Strength > Strength measured at 60 MPa, built to endure, built to impress.

• Minimal Abrasion > Stays smooth under pressure; resistant to wear in high-use commercial or private bathrooms.

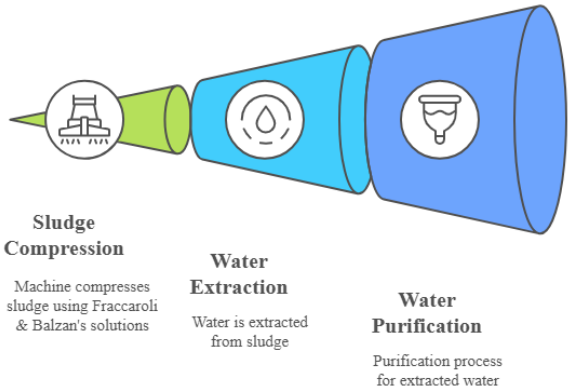

SUSTAINABILITY PRACTICES

QUALITY ASSURANCE AND SUSTAINABILITY VERIFICATION

All components and processes comply with internationally recognized sustainability and environmental standards. Third-party audits and certifications, including ISO 14001, GREENGUARD Gold, and LEED credits, validate material safety and environmental performance. Each product is the result of rigorous quality control and responsible manufacturing.

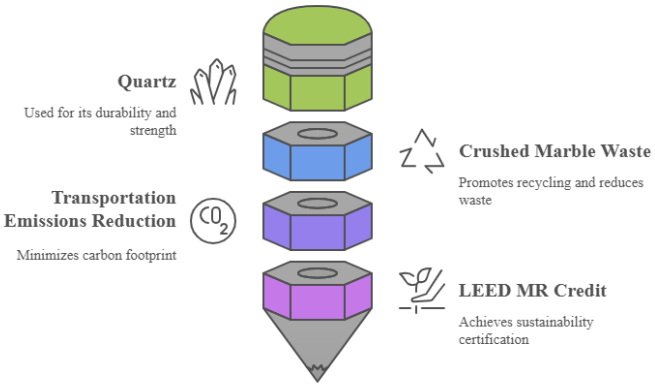

1. WATER RECYCLING

Production begins with 100% recycled water sourced through a closed-loop system from the marble facility. This significantly reduces fresh water consumption and supports LEED and WELL conservation targets. The recycling process achieves up to 98% water recovery and 85% sludge dehydration, minimizing environmental impact.

2. AGGREGATE SOURCING

Quartz and limestone aggregates are selected for their durability and low environmental footprint. Up to 50% of the aggregate mix is repurposed from crushed marble waste, diverting by-products from landfills. All materials are locally sourced to reduce transportation emissions and promote regional sustainability.

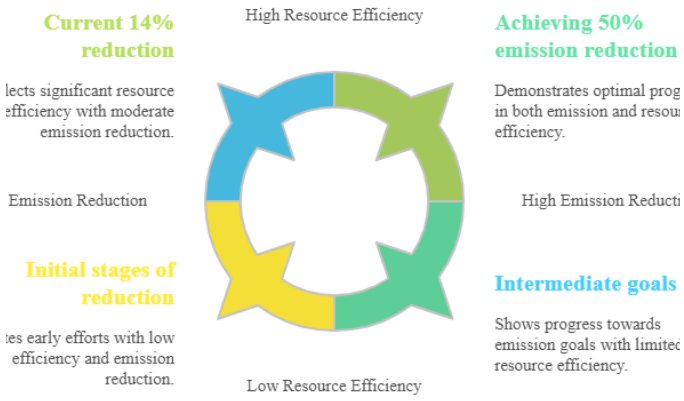

3. CEMENT USE

Only low-carbon, EcoLabel-certified cement is used, contributing to significant CO_2 emission reductions. Holcim's ECOPlanet cement emits less than half the carbon of conventional cement while maintaining structural integrity. These cement formulations meet LEED and WELL standards for low-emitting, sustainable materials.

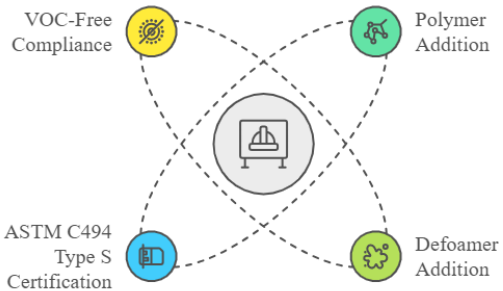

4. GLASS FIBER REINFORCEMENT

Glass fibers with 20% recycled content are added to enhance structural strength and durability. Supplied by Owens Corning, these fibers comply with EN standards and contribute to both LEED and WELL indoor environmental criteria. Their production strategy includes regional sourcing to limit transport emissions.

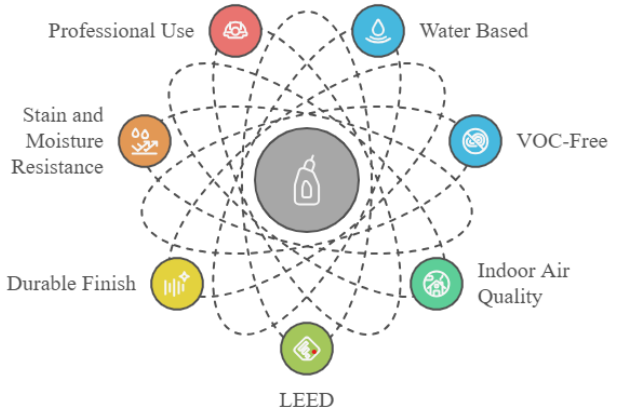

5. POLYMER AND DEFOAMER ADDITION

VOC-free polymers and defoamers enhance the performance of the concrete mix while reducing water demand. These non-toxic additives are certified under ASTM standards for high-performance concrete. Their use supports improved indoor air quality and aligns with LEED EQ requirements.

6. SEALER APPLICATION

Each basin is finished with a water-based, VOC-free sealer that enhances durability without compromising indoor air quality. The formulation is free from hazardous chemicals, aligning with LEED EQ Credit: Low-Emitting Materials and WELL air quality standards. It provides stain and moisture resistance while remaining safe for enclosed residential and commercial environments.

STONIUM

ISO 9001

CONSISTENT QUALITY:

Stonium has demonstrated the ability to consistently provide products and services that meet customer and regulatory requirements. This indicates a commitment to high standards of quality in every aspect of their operation.

EFFICIENT PROCESSES:

Stonium has well-defined and documented procedures and processes. This ensures efficiency and clarity in all their operations, from production to customer service.

CONTINUOUS IMPROVEMENT:

Commitment to continuous improvement. Stonium is not only maintaining current quality standards but also actively seeking ways to enhance their processes and outcomes for better customer satisfaction and operational efficiency.

CUSTOMER FOCUS:

Stonium places significant emphasis on customer satisfaction. This certification suggests that Stonium has effective methods in place for understanding customer needs, addressing customer feedback, and continually improving their offerings to enhance customer satisfaction.
