VEGETABLES

PROVIDER

COLTER

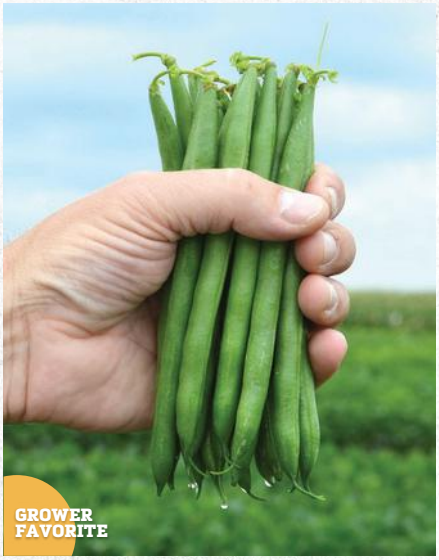

LEWIS

BARRON

ELEGANCE

LASALLE

BEANS

Culture: Beans prefer a well-drained soil of average fertility and a pH of 6.0 to 6.8. Because the seed is sensitive to cold temperatures, the soil should be at least 65-70°F. when planting. A three year rotation is recommended to avoid many bean diseases. Sow bush type and baby lima beans every 2-3" at 1-2" depth. For these types, 1 lb. sows about 250 row feet; seeding rate is 80 lbs. per acre. Larger seeded limas and favas require greater spacing at 4" apart. 1 lb. sows about 150 row feet; seeding rate is 100 lbs. per acre. Most bean varieties germinate in 6-10 days under favorable conditions. **Days to maturity** are from direct seeding and for variety comparison only.

Avg. seeds/lb. = 1200 (Bush & baby lima); 300-500 (Large lima & fava).

BUSH GREEN BEANS

PROVIDER

50 Days. A dependable productive favorite, early concentrated sets of tender medium green 5-6" straight pods develop quickly. High resistance to BCMV (BV-1, NY-15) and intermediate resistance to Powdery Mildew. ***00060***

COLTER

53 Days. This early maturing variety has been a consistent performer in our test plots. Upright plants produce reliable yields of very good quality medium-dark green straight 5½" pods that are mainly 4 sieve. Colter has shown good heat set tolerance and field holding ability. The strong vigorous plants have an excellent root system and high resistance to BCMV, Curly Top Virus, and Rust. U.S. Patent 9,439,376. ***12179***

High yields & quality with excellent disease resistance

LEWIS

53 Days. Lewis produces early reliable yields of smooth 4 sieve beans on upright plants that offer mid-high pod placement for easy mechanical or hand harvest. The straight, medium-dark green pods are 5½" in length and have slow seed development. Lewis has high resistance to BCMV-1 (US 1), Curly Top Virus, Halo Blight, and Rust, along with intermediate resistance to Bacterial Brown Spot. U.S. Patent 8,058,521. ***11016***

BARRON

54 Days. Barron offers growers high yield potential of straight pods that are set mid-high in the plant for easy harvest, measure 5½" in length, and have an eye-appealing very dark green color. The predominantly 4 sieve pods pick clean both mechanically and by hand. High resistance to BCMV, Curly Top Virus, Halo Blight, Bacterial Brown Spot and intermediate resistance to Common Blight. U.S. Patent 8,697,955. ***11404***

A true 2-sieve filet bean

ELEGANCE

54 Days. Elegance is the answer for any grower looking for a true 2-sieve gourmet bean. This compact plant produces high yields of straight, medium green, refined pods that measure 4½-5". A perfect option for fresh or bagging markets. High resistance to Rust, and intermediate resistance to BCMV, BCTV, and White Mold. ***13939***

LASALLE

54 Days. These high-quality beans are easy to harvest from strong upright plants that hold pods mid-high. Heavy yields of uniform straight pods are 6" long and predominantly 4 sieve. Lasalle has strong heat set, high resistance to BCMV, and intermediate resistance to Halo Blight, Bacterial Brown Spot and Common Blight. U.S. Patent 10,426,126. ***12792***

All-America Selections Winner · Grower Favorite · 2027 Introduction

NYQUIST
55 Days. A highly uniform 4 sieve bean with 5-5½" long, straight, medium dark green pods that have good cap retention and quality. The plants are well adapted to variable conditions and offer high pod set as well as high resistance to BCMV, Brown Spot, and Root Rot. ***13420***

PIKE
55 Days. Pike is a consistent performer that yields smooth medium- dark green pods that are 5¼" long and 3 sieve. It has a superior upright plant type that offers ease of harvest for mechanical or hand operations. Throughout the Northern U.S., it has shown excellent yield potential and field holding ability, even under stressful growing conditions. High resistance to BCMV and Curly Top Virus, intermediate resistance to Halo Blight, Bacterial Brown Spot, and Common Blight. U.S. Patent 7,511,197. ***11013***

RED TAIL ORGANIC
55 Days. Red Tail produces straight, dark green beans on an upright, vigorous plant which lends itself well to mechanical and hand harvest. Consistent 4 sieve pods measure 5½ -6" long and are tender and glossy without sacrificing flavor. This variety is highly resistant to BCMV and BCTV and offers intermediate resistance to Rust. (P.V.P.) ***13484***

ALDRIN
56 Days. Aldrin is ideal for both the fresh and bagging markets. Upright plants produce strong yields of high quality glossy pods that are 3-4 sieve. The medium dark green straight pods measure 5¼" and are set mid-high in the plant, allowing for a cleaner harvest. Strong vigorous plants have high resistance to BCMV and Curly Top Virus, and intermediate resistance to Rust and Halo Blight. U.S. Patent 9,603,326. ***12229***

BARTRAM
56 Days. Upright plants set consistent yields of smooth straight pods, even in warmer planting slots. The pods are set high for more efficient harvest and most caps and stems are retained, lengthening shelf life. Expect medium-dark green pods that are predominately 4 sieve, 5½" long, and perfect for bagged sales. The adaptable plants carry high resistance to Rust, BCMV, and Curly Top Virus. U.S. Patent Pending. ***13056***

CAPRICE
56 Days. Caprice has straight, smooth pods with slow seed development, high eating quality, and an attractive medium dark green color. Its upright plants set their 5½" pods mid-high in the plant, which lends well to both hand and mechanical harvest. Caprice yields well under disease pressure and has good heat tolerance and holding ability. A top variety on irrigated ground. High resistance to BCMV, Anthracnose, Halo Blight, and Common Blight, and intermediate resistance to Bacterial Brown Spot. U.S. Patent 6,835,876. ***00009***

SYBARIS
57 Days. Sybaris offers straight uniform dark green pods of high eating quality and flavor. The 5½" pods are set high in the plant, keeping them off the soil surface and making harvest a breeze. Great for fresh and processing markets, Sybaris has good cap retention, high resistance to BCMV, and intermediate Rust resistance. ***12625***

BUSH BLUE LAKE 274
58 Days. Developed from the famous vining Blue Lake, this easier-to-pick version produces over a longer season than other bush beans and brings back the meatiness, color and flavor of the "good old days." Seeds are white and slow to develop, maintaining a long smooth pod of delicious quality. Note: Bush Blue Lake 274 was developed from a vining bean, and as a result some plants may produce runners under certain conditions. ***00018***

VELERO

ROMA II

BUSH LIMA BEANS

EASTLAND

70 Days. Tall, upright bush plants bear gray-green 3" pods filled with dime-sized greenish-white flat beans. This heavy yielder of high quality baby limas is one of the best small lima varieties available. ***00021***

FORDHOOK 242

74 Days. This popular lima is a dependable yielder of plump thick beans of the finest quality. Expect uniform well-filled pods of delicious limas from this standard bush variety that may have short runners in cooler temperatures. ***00026***

BUSH ROMANO BEANS

VELERO

56 Days. Velero is an attractive Romano-type bean that sets pods mid-high on upright plants. Plants yield 6¼" medium dark green pods with high quality interiors and excellent flavor. High resistance to BCMV and Curly Top Virus. U.S. Patent 9,775,310. ***12601***

ROMA II

59 Days. Extend your harvest window by choosing this high quality Romano bush bean that is slow to develop seeds. Its wide, smooth flat pods measure 5½" and have reduced fiber, which enhances their eating quality. The bush plants hold pods high and allow for an easy harvest of the flavorful beans. ***11011***

All-America Selections Winner · Grower Favorite · 2027 Introduction

BUSH ROMANO BEANS (CONT.)

FORRESTER

60 Days. A unique flat bean with uniform 5½" medium green pods that are excellent for fresh eating due to their crisp texture and high gel content. Forrester has impressive yields, slim pods, and slow seed development. High resistance to Rust. ***13150***

BUSH WAX BEANS

CARSON

53 Days. Carson is a high yielding bright yellow wax bean that produces a high percentage of refined 4-sieve pods. The round slim pods hold well at maturity and measure approximately 5½" in length. Carson lends itself well to both hand and mechanical harvest. High resistance to BCMV and Anthracnose, and intermediate resistance to Bacterial Brown Spot. (P.V.P). ***11010***

ROCDOR

Gourmet quality

53 Days. Rocdor produces excellent yields of 6" deep yellow round pods on vigorous, widely adapted plants. Recommended for roadside and fresh market, Rocdor carries high resistance to BCMV, Anthracnose, and Halo Blight. Pick young for the yellow filet market. Dark seeded. ***00050***

DAWSON GOLD

55 Days. A high-yielding bush wax bean with medium yellow 5" pods. Medium plants set 4-5 sieve pods that are suitable for fresh market or processing. HR to BCMV, BCTV, and Rust, and IR to Anthracnose and Bacterial Brown Spot. ***14059***

GOLD RUSH ORGANIC

55 Days. This reliable variety offers a strong concentrated set of lemon-yellow beans that are easy to pick. The straight tender pods have crisp texture and nice flavor. High resistance to BCMV and Curly Top Virus. ***12761***

EDAMAME

EDAMAME KARIKACHI NO.3

85 Days. Tall, upright plants produce high yields of large, plump pods averaging three seeds per pod. Delicious steamed or boiled, beans have a sweet, nutty flavor. This heirloom variety is well-loved, reliable and highly nutritious. Plants are resistant to lodging. ***13926***

FAVA BEAN

BROAD IMPROVED LONG POD

85 Days. Quite distinct from other beans, these upright plants bear 7" pods, each containing 5 or 6 large flat oblong beans that can be used in the green shell or dry stage. They are hardy in cool weather but do not perform well in the heat, so early spring planting is recommended. ***00096***

POLE BEANS

SEYCHELLES

55 Days. A versatile AAS winning bean that offers stringless dark green 6" pods with a continuous set of 6 uniform pods per node. Train 7-9' climbing plants to a trellis for best results. Great for high tunnel rotations and open field. High resistance to BCMV and Anthracnose. ***12821***

KENTUCKY BLUE

63 Days. This high quality pole bean is a cross between Kentucky Wonder and Blue Lake, combining the best of both parents. It produces large, straight, round 6-7" pods of excellent quality on 6-8' vines. Strong yields of six pods per node are common. Pods have excellent flavor and slow seed development. Resistance to Rust. (P.V.P.) ***00035***

SHELL/DRIED BEANS

JACOB'S CATTLE ORGANIC

50-90 Days. This heirloom bean offers great versatility. Use for fresh production when beans are green, young, and tender (50 Days). Use as a white bean once the pods start to dry down (70 Days) or use as a winter dry bean once the traditional cream and red colors appear (90 Days). Wonderful flavor for beans and greens, winter soups, and chili. Yields can be exceptional. ***12363***

JACOB'S CATTLE ORGANIC

All-America Selections Winner · Grower Favorite · 2027 Introduction

SPECIALTY BEANS

MASCOTTE

50 Days. This AAS Winner is the ideal bean to offer in containers or win dow boxes. Dwarf upright plants grow 16-18" tall and offer a continuous yield of medium-green colored beans. ***11271***

IMPROVED PURPLE QUEEN

52 Days. A productive dark purple bean that is easy to pick, has disease resistance and tolerates cool weather conditions early in the growing season. The eye-catching 3-sieve pods measure 5½ -6" long and have excellent flavor, though the color fades to dark green when cooked. ***13584***

ROYAL BURGUNDY ORGANIC

55 Days. This widely adapted bush bean grows well in cool conditions and sets strong yields of very dark purple pods. Pick the 3-4 sieve pods at 5" long and combine with yellow and green beans for a striking display. Pods lose their purple color when cooked. High resistance to White Mold. ***12760***

CELINE ORGANIC

58 Days. The first purple wax bean on the market, Celine has a bright magenta color, pale yellow interior, and sweet refined pods. The slender 2-3 sieve pods develop early and in high numbers. Pick these petite filet beans at 4½-5" long for best quality. High resistance to BCMV. ***13126***

DRAGON TONGUE

60-90 Days. This horticultural type bush bean is suited for harvest as a fresh snap bean or as a shelled bean at full maturity. As a snap bean, harvest when the flat 6-8" beans turn from lime green to a buff yellow with bright purple stripes. At this stage, the stringless pods are extremely crisp, juicy, and sweet. Pods lose their purple mottling when cooked. If dried beans are desired, let pods fully mature and dry before harvesting. The mature seeds are light brown with dark mottling. ***11014***

SCHRUTE F1

SEDONA F1

BEETS

Culture: Direct-seed in 50-85°F. soils. Beets prefer a well-drained, sandy loam with a pH of 6.4-6.8. Add hydrated lime and boron to your fertilizer. Very early plantings may bolt if subjected to 2-3 weeks of temperatures below 50°F. Beet seeds have several viable embryos in every seed ball; care in spacing when planting can save many hours of thinning later. Beets germinate in 1-2 weeks, depending on conditions. Moisture is critical; letting them dry out at various stages will result in poor germination, slow growth, or tough, woody roots at harvest. Fall-harvested beets can be topped and stored in a cool, dark storage near 35°F. and 95% rel. humidity. Days to maturity are from direct seeding and for variety comparison only.

Avg. seeds/lb. = 17,000-44,000.

HYBRID BEETS

BORO F1

50 Days. This flavorful beet was bred with quality of taste in mind. Harvest the roots as mini beets or when they have a diameter of 3-4". Leaves can also be harvested as baby greens. Stores well and has intermediate resistance to Cercospora Leaf Spot. ***12531***

EAGLE F1

50 Days. This early-maturing hybrid beet offers very dark red, uniform globe-shaped roots with small crowns and strongly attached tops. Eagle's interior gets high ratings for outstanding flavor, fine texture, and deep red color that is free of zoning. The dark green, red-veined tops grow 14-16" tall, are suited to bunching, and have good heat tolerance. ***11200***

KESTREL F1

Harvest for baby or mature beets

53 Days. Kestrel shapes up early into a smooth, globe shaped, dark red root that can be harvested for baby beets or left to mature to full size. With refined tap roots, small crowns and 12-13" semi-glossy, bright green tops, Kestrel is excellent for bunching and stores well at full size. Tolerant to bolting, and intermediate resistance to Downy Mildew, Powdery Mildew, Cercospora and Rhizoctonia. ***00227***

RED ACE F1

54 Days. Red Ace resists zoning and bolting in the heat and has intermediate resistance to Cercospora Leaf Spot. With excellent eating quality, consistent performance and heavy yields of uniform beets, Red Ace is a grower favorite. Smooth, deep-round roots have short bright green tops suited for supermarket or farm market sales. ***00210***

MERLIN F1

55 Days. A hybrid beet with exceptional eating quality, high sugars (12-15% Brix), and dark green glossy tops that hold their color well and are perfect for bunching. Uniform globe-shaped roots have a refined tap root and dark red interior that tolerates zoning during adverse conditions. Intermediate resistance to Downy Mildew and Cercospora, and tolerance to bolting. ***00212***

RED ATLAS F1

55 Days. This high-yielding beet produces uniform globe-shaped roots with dark red color and low zoning. Red Atlas has high-quality roots with high sugar content at 12-15% Brix and are versatile for fresh market bunches or processing. The upright bright green plants are 14-15" tall and slow to bolt, with intermediate resistance to Cercospora, Downy Mildew, and Powdery Mildew. ***13169***

SCHRUTE F1

60 Days. A versatile hybrid, Schrute is a fast-growing, globe shaped beet with smooth skin, a beautiful internal color and great flavor. Strong, tall tops make this a perfect option for fresh market, bunching or processing. Tolerant to bolting, Schrute offers intermediate resistance to Cercospora and Rhizoctonia. ***13839***

SEDONA F1

60 Days. This uniform dark red beet has smooth skin, deep internal color with no zoning, and high percent Brix. Tops are dark green, 17-18", and strongly attached to the round to top-shaped roots. High quality for both fresh market and processing use. ***13510***

All-America Selections Winner · Grower Favorite · 2027 Introduction

UDINA F1

85 Days. This cylindrical beet was developed especially for canning, allowing many uniform, deep-red slices to be cut from each root. The sweet flavor also makes Udina a great option for gardeners and home preserving. With a smooth, dark-red exterior and strong tops, it is suited for fresh-market bunching and processing. HR to Rhizoctonia and IR to Cercospora Leaf Spot. ***13995***

OPEN POLLINATED BEETS

AVALANCHE

50 Days. This All-America Selections Winner produces round white roots that have snow white interiors. With the sweetness of a red beet, but no bitterness or earthy flavors, Avalanche is perfect roasted, raw in salads, or for juicing. Highly resistant to Cercospora Leaf Spot. ***12180***

TOUCHSTONE GOLD

55 Days. An outstanding golden beet that produces uniformly round roots with smooth bright orange skin and a vivid golden interior that holds its color and mild sweet flavor when cooked. The green tops are well suited to bunching and offer intermediate resistance to Cercospora Leaf Spot. Compared to other golden beets, Touchstone Gold offers better germ and uniformity, smoother shoulders, less zoning, and tolerance to bolting. ***11213***

ANELLO

55 Days. An improved Chioggia selection with prominent pink rings, a more uniform round shape, and smooth, clean roots. The strong upright tops are great for bunching, measuring 12-14" tall. Comparison trials with other Chioggia strains show that Anello has less color bleeding and minimal lateral roots. ***14061***

CHIOGGIA GUARDSMARK ORGANIC

60 Days. These "candy cane" beets are favored for their distinctive pink and white candy striped interior color that is outstanding when served fresh, but tends to fade when cooked. The consistently round, slightly flattened roots have firm sweet flesh. The bright green tops are well attached. ***11164***

DETROIT DARK RED

63 Days. Roots are globe-shaped with solid deep red flesh that's rich and flavorful. Tops are strong and tinged with red, especially in cool weather. A good choice for late sowings and winter storage. ***11209***

GOLDEN BOY

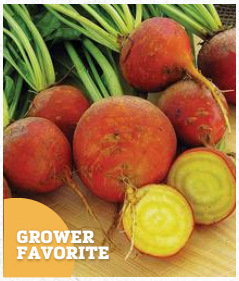

85 Days. A striking golden beet with uniform globe- shaped roots, bright yellow color, and high sugar content. Golden Boy maintains high yields and consistent quality even under disease and drought pressures. The light green tops are 14-16" tall, slow to bolt, and have intermediate resistance to Cercospora. The upright plant habit keeps leaves off the soil, encouraging airflow and improving plant health. ***13260***

BATORY F1

BROCCOLI

Culture: A successful broccoli crop can be achieved from direct seed or transplant. In all cases, ensure that the soil has been well prepared with sufficient fertilization and a pH of 6.0-6.8. If direct seeding, take extra care to minimize weed pressure and protect emerging seedlings from flea beetle and root maggot damage. If transplanting, sow seed in cell trays at 65-70°F. After germination, lower to 55-60°F to encourage stockier seedlings. Transplant to the field after 5-6 weeks. Premature heading (buttoning) may occur if transplants are old or grown at temperatures below 55°F. **Days to maturity** are from transplanting and for variety comparison only.
Avg. seeds/lb. = 115,000.

ASPABROC F1

55 Days. Known as Broccolini® in grocery stores, Aspabroc resembles a broccoli raab with an asparagus stem, and offers a mild spicy taste. Harvest mature central shoots promptly to encourage side shoot production, which will continue for about 4 weeks in mild weather. Ideal for spring or fall crop. ***11298***

DELISTEM™ SBS-04601 F1

65 Days. DeliStem™ is a true broccoli x gai lan cross with the perfect combination of tender stems and flavorful florets. Productive plants perform well for both fresh market growers and home gardeners, with the potential for multiple harvests. The gai lan (Chinese broccoli) genetics give DeliStem™ a distinctly sweet, mild flavor and longer, more tender stems and leaves than standard sprouting broccoli. ***14082***

BELSTAR F1 ORGANIC

66 Days. Best for spring, summer, or fall, this widely adapted variety has performed very well under many different regional growing conditions. Blue-green heads have a uniform shaped dome with medium sized beads and produce offshoots after the main head is harvested. High resistance to Fusarium Yellows. Intermediate resistance to White Rust and Black Rot. ***12532***

GYPSY F1

68 Days. Good heat tolerance and holding ability make Gypsy a winner for spring plantings. Vigorous but uniform plants yield smooth domed heads that have an attractive medium green color and a medium small bead. An excellent variety for fresh market bunching or crown cut use. Intermediate resistance to Downy Mildew. Grow from cool into warm planting slot. Patent 6,118,046. ***00239***

APPALACHIAN F1

72 Days. Appalachian is a strong performer in the Northeast and Mid-Atlantic, with a compact plant habit and uniform mid-early maturity. The heads are medium-large and suitable for crown and short trim markets with small, blue-green beads. ***13561***

COMMONWEALTH F1

72 Days. A blue-green variety with high-quality heads for the crown cut market. Commonwealth has performed well in cool plantings in the Northeast and Mid-Atlantic with early maturity and a compact plant. Medium-large heads have a small bead and uniform maturity. Intermediate resistance to Clubroot. ***13605***

LUNA F1

72 Days. Luna is a highly uniform dark blue-green broccoli favored for the crown cut market. It has high quality heads with attractive medium-small beads. Luna is championed by roadside and fresh market growers for its consistency, quality, and side shoot production. Best for early spring and fall plantings. ***11725***

BATORY F1

75 Days. Uniform plants set reliable yields of smooth, dense, 6" heads with small beads and high quality. The blue-green heads are held medium-high in the plant and resist purpling. A strong performer in the Eastern U.S., Batory is well suited to the crown cut and bunching markets. ***13194***

All-America Selections Winner · Grower Favorite · 2027 Introduction

COVINA F1 ORGANIC
75 Days. A blue-green broccoli variety for temperate climates, Covina offers value for extended spring and fall production. The large vigorous plants are reliable in adverse field conditions, forming uniform tightly domed heads. High resistance to Fusarium Yellows and intermediate resistance to White Rust. ***13355***

DIPLOMAT F1
75 Days. Attractive blue-green heads with a small bead size make Diplomat an excellent choice for roadside and fresh market sales. Diplomat has shown good heat and cold tolerance, and produces very uniform semi-domed heads. Intermediate resistance to Downy Mildew. Grow from cool into warm planting slot. Patent 5,945,582. ***00220***

GREEN MAGIC F1
75 Days. Green Magic is in the mid-early maturity class, has wide adaptability, and offers very uniform heads. The semi-domed blue- green heads have an attractive tight medium-small bead size. Green Magic has a desired plant habit and has shown good heat tolerance, holding ability, and intermediate resistance to Downy Mildew. Grow from cool into warm planting slot. U.S. Patent 5,945,582. ***11408***

MARATHON F1
75 Days. Marathon is used for cool weather production on the West coast, and as a late summer and fall crop in the Northeast. The large blue-green heads are heavy with high smooth tight domes and very small fine beads. An excellent choice for bunching and the crown cut market. Intermediate resistance to Downy Mildew. Grow from warm into cool planting slot. ***00246***

SPECTRE F1
75 Days. Well-adapted plants produce early yields of high-dome blue-green heads with a fine to medium bead. Spectre has excellent field holding ability and is reliable for crown cut, bunching, and floret processing markets. The high-quality heads have a mild sweet flavor, smooth dome, and small leaf scars. ***13206***

ASTEROID F1
77 Days. High quality dark green heads are suited for crown cut, bunching and florets with a smooth dome and medium-small bead. Vigorous upright plants harvest easily with a clean stem and healthy foliage. ***11726***

EASTERN CROWN F1
77 Days. Excellent heat tolerance and performance during long days make Eastern Crown a strong variety for East Coast growers. The compact plants set blue-green, domed heads with small beads. Perfect for crown and short trim markets. ***12696***

EMERALD CROWN F1
77 Days. Emerald Crown is a medium-maturing broccoli that yields very uniform heads with good weight. Small framed plants have intermediate resistance to Downy Mildew and produce blue-green heads with a small bead size and a nice domed shape. The heads are firm and highly resistant to purpling during cool growing periods. Emerald Crown produces high quality crown cuts. Grow from warm into cool planting slot. U.S. Patent 7,256,328. ***11987***

HIJACK F1
80 Days. Hijack is a strong variety that performs best in the fall and winter slots with shorter day lengths for both the South and the Northeast. It has high quality heads with attractive small beads and uniform dome shape set on an upright plant. Hijack shows good tolerance to pin rot. ***13889***

PURPLE MAGIC F1

IMPERIAL F1

PURPLE MAGIC F1

80 Days. This gorgeous AAS-winning variety has a fully purple head and stem, making it high in anthocyanins and boosting its nutritional value. The large domed heads have a small bead and are great for crown cut or bunching, with excellent tenderness and sweet broccoli flavor. Plants are medium-large, upright, and perform well in cooler seasons. A beautiful addition to both roadside stands and home gardens. ***66544***

IMPERIAL F1

85 Days. Imperial produces high quality tight dome-shaped heads with small dark green beads. Its heads have excellent post-harvest holding ability and work well for both bunching and crown cut. Mid to mid-late maturing, Imperial performs best during long day growing conditions. Grow from warm into warm planting slot. U.S. Patent 7,256,328. ***11409***

JADE CROSS F1

MARTE F1

SILVIA F1 ORGANIC

GUSTUS F1

REDARLING F1

BRUSSELS SPROUTS

Culture: See Broccoli culture on page 18 for general culture suggestions and the added tips below for a successful crop of Brussels Sprouts.

1. Time your planting for a cold weather harvest.
2. If you plan to harvest whole stalks, cut off the plant's top 4-5 weeks before harvest. This hastens maturity of the upper sprouts.
3. Before harvest, snap off leaves at the stalk to make harvest and sprout removal quicker and cleaner.
4. Cut whole stalks for easy transport from the field.
5. To harvest sprouts over multiple pickings, snap off sprouts from bottom to top.

Days to maturity are from transplanting and for variety comparison only.

Avg. seeds/lb.=115,000.

JADE CROSS F1

85 Days. Jade Cross is a very adaptable hybrid that produces high yields of deep green flavorful ¾-1" round sprouts on 28" plants. The plants are more compact than other varieties, which makes them less subject to wind damage. Its early maturity allows for later planting when growing conditions are more favorable. ***11240***

SILVIA F1 ORGANIC

103 Days. Compact upright plants have small leaves with a short petiole. Dense sprouts are set early in high counts and are good for mechanical and hand harvest. Plants have high resistance to Fusarium and intermediate resistance to Black Rot. ***13483***

MARTE F1

107 Days. Vigorous tall stems set uniform high quality round sprouts that measure 1-1½". Medium blue-green plants have high resistance to Fusarium Yellows and are strong against lodging. ***12796***

GUSTUS F1

110 Days. An early maturing variety that is easy to grow and high-yielding. Large round 1¼" sprouts are medium-green, well-filled, and have a mild taste. The sprouts are clean and hold well in the field with a high marketable percentage. ***13569***

REDARLING F1

140 Days. Vibrant red-purple sprouts are firm, obovate, and well-filled. The uncommon color and mild taste make Redarling ideal for fresh market sales. Sprouts average 1¼" and plants offer high yield potential. ***12762***

All-America Selections Winner · Grower Favorite · 2027 Introduction

CABBAGE

Culture: A successful cabbage crop can be achieved from direct seed or transplant. In all cases, ensure that the soil has been well prepared with sufficient fertilization and a pH of 6.0-6.8. If direct seeding, take extra care to minimize weed pressure and protect emerging seedlings from flea beetle and root maggot damage. Cabbage crops are more often started as transplants in cell trays (128-200 cell). Sow seed in a 65-70°F greenhouse. After germination, greenhouse temperature can be lowered to 55-60°F to encourage stockier seedlings. Seedlings can be transplanted to the field after 5-6 weeks. Succession plantings can help achieve consistent supply. **Days to maturity** are from transplant and are only for variety comparison. **Avg. seeds/lb. = 105,000.**

FRESH MARKET

KATARINA F1 2½-3 LBS.
48 Days. This very early green cabbage is ideal for the spring and summer seasons. Compact plants are suited to tight spacing and have light green, dome-shaped heads weighing 2½-3 lbs. The remarkably sweet and tender leaves helped make Katarina an All-America Selections winner. ***13028***

TIARA F1 ORGANIC 2-3 LBS.
57 Days. This early maturing green cabbage forms small round 2-3 lb. heads measuring 4-6" in diameter. The compact plants are excellent for close spacing and small gardens, and the mini heads offer excellent eating quality for fresh market with flavorful crisp leaves and a short core. The heads hold well in the field and in short-term storage. ***13357***

QUICK START F1 3 LBS.
60 Days. A great variety to grow for early cabbage sales at roadside and farmers' markets. The round, 3 lb. heads have medium green color and short cores, good uniformity on a compact plant, and high resistance to Fusarium Yellows. It can be grown from spring to fall and has very good holding ability for an early variety. ***11411***

STONEHEAD F1 4-6 LBS.
60 Days. This All-America Selections winner is an early variety with a compact plant and dense 4-6 lb. gray-green head best suited for fresh market use. Stonehead tolerates tip burn and offers excellent quality and holding ability. ***11277***

FARAO F1 ORGANIC 3-4 LBS.
63 Days. Very uniform dense dark green 3-4 lb. heads are produced on a small framed plant. Tender leaves offer a mild peppery sweet flavor, perfect for fresh slaw or stir fry. Farao is the perfect size for boxing or for CSA shares and performs well in the summer season. Tipburn resistant. ***12366***

BOURBON F1 3-5 LBS.
65 Days. An early and dependable Northern fresh market cabbage with a dense head that is strong against bolting and cracking. High round heads weigh 3-5 lbs. Productive plants have a strong root system and are well-adapted to a range of growing conditions. ***13465***

BLUE VANTAGE F1 4-6 LBS.
72 Days. With a large solid 4-6 lb. head, Blue Vantage ranks high for the fresh and coleslaw markets. It combines good wrapper leaves, short cores, and disease resistance with excellent field holding ability. It is widely used for spring and summer sowings in cool temperate regions and for spring crops in warmer frost-free zones. High resistance to Fusarium Yellows and tip burn. ***00265***

75 Days. A blue-green fresh market cabbage with very dense, uprightglobe-shaped heads set on medium plants. The uniform 3-4 lb. headshave great wrap, nice internal quality, and hold well in the field and for shipping. Heads are firm with crisp leaves and mild flavor. High resistance to Fusarium Yellows. ***13252***

K-Y CROSS F1 6 LBS.

75 Days. Large, light green, oblate-shaped heads can weigh up to 6 lbs. and grow on a small frame. The dense heads have a short core and thin tender leaves that have a very appealing sweet flavor. K-Y Cross has shown good heat tolerance and is suitable for warm growing areas. ***11022***

DUAL PURPOSE

XTREME VANTAGE F1 6 LBS.

75 Days. A round, blue-green cabbage suitable for both fresh and processing markets, Xtreme Vantage offers excellent uniformity, large dense 6 lb. heads and bright white interior color. Strong tolerance to tipburn, high resistance to Fusarium Yellows, and intermediate resistance to Black Rot. ***12994***

BRONCO F1 ORGANIC 3-5 LBS.

78 Days. A main-season fresh market variety with high yields and attractive round 6-7" heads. The firm blue-green heads are tightly wrapped and a consistent 3-5 lb. size, perfect for boxing and shipping. Expect high-quality heads with a short core, sweet and crunchy texture, and tolerance to tip burn. High resistance to Fusarium Yellows. ***13356***

BELLICOSE F1 5-8 LBS.

75 Days. A vigorous high-yielding variety suited to fresh market boxing and processing. Uniform dense heads are held upright on well-adapted plants with a strong root system and high resistance to Fusarium and Black Rot. A reliable yielder under variable weather conditions. ***13567***

Outstanding field performance

BRAVO F1 3-6 LBS.

85 Days. This rugged hybrid has become the standard, performing well from the Deep South in winter to the North in summer. The large 3-6 lb. round uniform heads are a beautiful blue-green color. Use close spacing (10-12") for fresh market and wide spacing (18-24") for sauerkraut. High resistance to Black Rot. ***00247***

SUPERSTAR F1 3 LBS.

90 Days. A high quality fresh market cabbage for mid-season, SuperStar has medium-large 3 lb. green heads with excellent wrapper leaves and holding ability in the field and post-harvest. The thick leaves are flavorful and well suited to fresh market and processing. High resistance to Fusarium Yellows (race 1) and intermediate resistance to Black Rot. ***12993***

DEUCE F1 8-12 LBS.

95 Days. Deuce is a later maturing cabbage that produces extra-large dense heads, ideal for sauerkraut. Its round heads can weigh 8-12 lbs. and have a beautiful blue-green exterior color, white interiors, and short cores. This uniform variety also offers good holding ability, high resistance to Fusarium Yellows, and tolerance to tip burn. ***11412***

TAURUS F1 6-12 LBS.

105 Days. A high-yielding dual-purpose variety suited to both fresh market use and processing for coleslaw, Taurus has a round to flat-round shape and blue-green color. Heads reach weights of 6-12 lbs. depending on spacing and hold well in the field. Taurus performs consistently well in hot and humid conditions. High resistance toFusarium Yellows and intermediate resistance to Black Rot. ***13244***

MOHAWK F1 3-6 LBS.

115 Days. Mohawk produces medium-large heads that are dense and tightly wrapped and have excellent storage ability post-harvest. Round, blue-green heads sit high on an upright plant which keeps heads clean and makes them easy to harvest. High resistance to Fusarium Yellows. ***13644***

All-America Selections Winner · Grower Favorite · 2027 Introduction

STORAGE

OVATION F1 7-8 LBS.

120 Days. Ovation offers harvest flexibility with a strong plant that produces uniform heads that weigh 7-8 lb. and hold well in the field. Round heads sit on an upright plant with good wrapper leaves and dense internals. Ovation is suited for long term storage and demonstrates intermediate resistance to Black Rot. ***13932***

SATIE F1 4-6 LBS.

120 Days. A late maturing 4-6 lb. white cabbage for medium to long storage. Satie has dense, round heads that hold well in the field and offer extended storage ability. When planted late for fall harvests, the plants perform well under hot summer conditions and carry high resistance to Fusarium Yellows and intermediate resistance to Black Rot. ***13245***

RED CABBAGE

PRIMERO F1 ORGANIC ● 2-3 LBS.

65 Days. A productive early variety with a compact habit that is suitable for planting at tight spacing. Round 2-3 lb. heads have good texture and dark purple-red color. Heads form quickly and hold well in the field, a good choice for succession planting. ***13485***

RUBY BALL IMPROVED F1 3-4 LBS.

65 Days. Ruby Ball Improved is an early maturing red cabbage with a dark red exterior color and a good internal red color. The 3-4 lb. round heads are produced on upright plants and have a medium core. The compact plant allows for dense spacing and produces heads of excellent quality that hold well at maturity and tolerate heat and cold well. ***12317***

INTEGRO F1 ORGANIC ● 3-4 LBS.

75 Days. This beautiful red cabbage forms very uniform 3-4 lb. heads with short cores and good field holding ability. Large sweet tender heads right out of the field are best for the fresh market but short term storage is also an option. ***12368***

RED JEWEL F1 ● 3-5 LBS.

75 Days. With a beautiful deep purple-red color, dense head, and short core, Red Jewel is ideal for both fresh and shredder markets. The uniform round 3-5 lb. heads tolerate tip burn and mature early and uniformly for an easier harvest. Red Jewel shines with excellent wrapper leaves and striking internal color. ***12995***

ROADIE F1 4-6 LBS.

75 Days. Upright round-shaped heads are dense with excellent flavor and color and crisp bright purple-red leaves. The medium-large heads mature quickly, reaching 4-6 lbs. in only 75 days. Vigorous plants have high resistance to Fusarium Yellows, intermediate resistance to Black Rot, and good heat tolerance. An especially strong variety for the East Coast. ***13246***

BUSCARO F1 ORGANIC ● 4-5 LBS.

95 Days. This large 4-5 lb. cabbage is ideal for processing coleslaw. The crisp heads offer a vibrant red and white coloring with a short core. Buscaro is best for fall production with medium term storage ability. ***12535***

CHINESE CABBAGE

BLUES F1 *Slow bolting* 4½ LBS.
57 Days. With intermediate resistance to Mosaic Virus, Downy Mildew, and Bacterial Soft Rot, Blues is a Napa type that can be used for either spring or early fall plantings. Vigorous plants produce 10" tall barrel-shaped heads weighing 4½ lbs. with a fresh green color and bright white ribs. ***00258***

BILKO F1 ORGANIC 2-3½ LBS.
63 Days. Bilko produces creamy yellow sweet mild-flavored leaves, is slow to bolt, and makes a great substitute for lettuce or traditional cabbage. Grow in the fall slot for large, densely packed, barrel shaped heads. High resistance to Clubroot and Fusarium Yellows. ***12365***

YUKI F1 4½ LBS.
67 Days. Yuki forms uniform, barrel-shaped heads with dense yellow internal leaves. The medium-large heads have a short core and are slow to bolt, making Yuki adaptable to fall production. Intermediate resistance to Clubroot, and tolerance to Black leaf speck and tip burn. ***13956***

SAVOY CABBAGE

FAMOSA F1 ORGANIC 3 LBS.
75 Days. Best for the summer season, Famosa averages 3 lbs. in size with green leaves and a tinted yellow interior. Excellent flavor both fresh or cooked. Intermediate resistance to White Rust. ***12537***

SERPENTINE F1 3-4 LBS.
110 Days. An early maturing green savoy cabbage for summer and early fall fresh market sales. The medium to large, flat-round heads weigh 3-4 lbs. with good density and leaf cover for reduced tipburn and better field holding. Intermediate resistance to Black Rot. ***13416***

SWEETHEART CABBAGE

CARAFLEX F1 ORGANIC 1½-2 LBS.
70 Days. The unique pointed shape of Caraflex allows you to space plants close or grow it as a mini head. The 1½-2 lb. heads have mild, very sweet flavored leaves reminiscent of lettuce. Great leaf size and quality for wraps and fresh salads. Caraflex performs best in summer and fall and stores well. High resistance to Fusarium Yellows. ***12367***

FAMOSA F1 ORGANIC

SERPENTINE F1

CARAFLEX F1 ORGANIC

All-America Selections Winner · Grower Favorite · 2027 Introduction

CARROTS

Culture: A deeply-tilled sandy loam or organic soil with a pH of 6.0-6.8 is best for carrots. Raised beds with minimal compaction work well, and timely watering is advisable. Pelleted seed is recommended for precision planting. Germination takes 2-3 weeks, and early growth is slow. As carrots near maturity, throw loose soil over root crowns during cultivation to reduce green shoulders. After harvest, topped carrots remain in excellent condition for many weeks if kept cold and moist (35°F. and 95% relative humidity). Succession plantings will give a continuous supply throughout the summer and into fall. **Days to maturity** are from direct seeding and for variety comparison only.

Avg. seeds/lb. = 175,000-390,000. (RawSeed)

MOKUM F1

54 Days. Slender roots are deeply colored, almost coreless, and measure 6" long x ¾" wide at full size. The healthy 9" tops are suited to bunching, and the roots hold their quality and sweet taste even in warm weather. Mokum is a top choice for fresh eating quality. Intermediate resistance to Alternaria Black Rot, Cercospora Leaf Blight, and Pythium Cavity Spot. ***13568***

YAYA F1 ORGANIC

60 Days. Yaya sets the standard for uniformity in early Nantes type carrots. The 2' tops and 7" cylindrical blunt roots are ideal for bunching and baby carrots, with brilliant deep orange color. Growers see high marketable yields in count and weight, and an average of 7.9% Brix, though this sweetness can be stress-sensitive. Intermediate resistance to Black Rot, Liquorice Rot, Cavity Spot, and Cercospora Leaf Blight. ***12370***

RAINBOW F1

67 Days. This unique hybrid is a single variety with multi-colored roots in white, yellow, orange, and coral. Unlike colored carrot mixes, the roots of Rainbow mature uniformly for beautiful bunches of 7-9" carrots with 12" tops. Intermediate resistance to Alternaria Black Rot, and Cercospora Leaf Blight. ***13571***

SCARLET NANTES

68 Days. Scarlet Nantes is tender and crisp with delightful sweetness, especially when young. With brightly colored interiors, Scarlet Nantes ranks high among open-pollinated types for roadside sales. ***00323***

WHITE SATIN F1

68 Days. This Imperator x Nantes hybrid produces sweet (average 7.1% Brix) 8-9" long cylindrical roots, with a high percentage of U.S. #1 class. The 14" tall tops make for easy bunching. Offer with other colors at fresh market. Intermediate resistance to Black Rot, Cercospora Leaf Blight, Powdery Mildew, and Liquorice Rot. ***12540***

GOLDFINGER F1

FUERTE F1

INTREPID F1

NANTINDO F1

NEGOVIA F1 ORGANIC

PURPLE HAZE F1

ROYAL CHANTENAY

SIROCO F1

GOLDFINGER F1

69 Days. An early Nantes type known for high marketable yields of high quality roots that reach 7-8" and are very uniform and attractive. It has strong, upright tops with good bolting tolerance and its smooth roots have a dark orange exterior color, good interior color, small to medium core and sweet flavor (8-9% Brix) that is maintained even under stress. Expect slightly smaller roots at high density plantings. A beautiful variety for baby carrot production or for bunched carrot sales. ***11909***

FUERTE F1

70 Days. This excellent Nantes carrot is known for its uniform shape with strong tops and good flavor. Fuerte offers high yields of medium-orange blunt-tipped cylindrical roots with some shoulder. ***12723***

INTREPID F1

70 Days. A widely adaptable tapered cello-type carrot averaging 10" long. Intrepid has very smooth, vibrant orange skin and strong, well-attached tops that resist bolting. Intrepid is widely adaptable and performs in both temperate and arid environments. ***13423***

NANTINDO F1 ●

70 Days. Beautiful 6-8" roots taper slightly to the tip and vigorous strong tops work well for fresh market bunching. The deep orange exterior color and uniform interior color give Nantindo great customer appeal and the high quality roots can have 9% Brix, though this sweetness can be stress-sensitive. ***00328***

NEGOVIA F1 ORGANIC ●

70 Days. The 8" roots of this orange Continental Nantes resemble an Imperator type and have strong dark green tops that bunch well. Roots are sweet right out of the field for fresh market sales as well as after storing, and the uniform dark orange interior color makes them excellent for slicing. Intermediate resistance to Alternaria Leaf Blight and Cercospora Leaf Blight, Powdery Mildew, Black Rot, and Liquorice Rot. ***12390***

PURPLE HAZE F1

70 Days. A striking carrot with a deep purple exterior and contrasting orange interior color. The 10-12" roots are smooth, heavy shouldered, and taper to a point. Its 14-16" tops are upright and strong. Purple Haze is not tolerant to bolting and must be planted later in the spring to avoid extreme cool conditions at a young stage. Roots lose their purple color when cooked. ***11319***

ROYAL CHANTENAY

70 Days. For years, this has been the standard carrot for heavy or shallow soils. It has a broad, blocky shape with little taper, and its color is wonderful throughout. The roots may be harvested early or left to grow for weeks to develop maximum yield. Even when very large, roots still have fine flavor and texture. ***00321***

SIROCO F1 ●

70 Days. This 8-9" Nantes carrot is very smooth with a cylindrical shouldered shape and well-rounded tips at maturity, ideal for slicing and cello markets. The roots average 1½-1¾" in diameter and have a small core and good color. Strongly attached tops can handle harvest by top-lifting and offer high resistance to Powdery Mildew and Alternaria Leaf Blight and intermediate resistance to Pythium Cavity Spot and Aster Yellows. ***13297***

All-America Selections Winner ● Grower Favorite ● 2027 Introduction

TENTACION F1
70 Days. A uniform, medium-sized Nantes carrot with smooth cylindrical roots averaging 5-7" long. Robust tops make Tentacion easy to harvest and bunch. A high-quality carrot for fresh market and supermarket cello bags. ***13818***

YELLOW STONE ORGANIC
70 Days. This versatile variety can be used fresh, cooked, or stored. Averaging 9" long, the strong 16-22" tops make it easy to harvest and bunch. Average 8.5% Brix. Intermediate resistance to Black Rot, Alternaria Leaf Blight, Cercospora Leaf Blight, and Powdery Mildew. ***12539***

DEEP PURPLE F1
72 Days. These dark purple Imperator type carrots have a tapered shape and deep color through to the core. The sweet roots reach 7-8" in length and are excellent for specialty fresh markets and juicing. Tall strong healthy tops and intermediate resistance to Alternaria Leaf Blight, Black Rot, Cercospora Leaf Blight, and Pythium Cavity Spot. ***12936***

NAVAL F1
72 Days. A versatile Continental Nantes that can be used for bunching, fresh market, or long-term storage. Strong tops measure 16" and the 8" roots are uniform, crack resistant, and have excellent flavor. Intermediate resistance to Alternaria Leaf Blight, Alternaria Black Rot, and Cercospora Leaf Blight. ***13060***

BOLERO F1
75 Days. A well-known variety, Bolero is a Nantes type suited for bunching, fresh market, as well as processing and storage markets. Healthy, strong tops are produced on uniform, sweet roots that measure 8" long. This variety can handle harvest by top lifting and offers high resistance to Powdery Mildew, Late Leaf Blight as well as intermediate resistance to Cavity Spot. ***13940***

Parsnip - see page 96.

SNOW CROWN F1

ABSOLUTE F1

APEX F1

FLAMENCO F1

AQUARIUS F1

C5063 F1

TWISTER F1

CAULIFLOWER

Culture: See Broccoli culture on page 18 for general culture suggestions. If selected varieties are not self-wrapping, "blanch" the heads to prevent yellowing. When heads are about golf ball size, gather the outer leaves and tie with string or rubber bands. Premature heading may occur if transplants are old or grown at temperatures below 55°F. Best quality is achieved when heads mature in cool weather. Days to maturity are from transplanting and for variety comparison only.
Avg. seeds/lb. = 115,000.

SNOW CROWN F1

50 Days. This AAS Winner features 7-8" rounded heads of exceptional firmness and quality. Tie heads for best quality; underside may show a light purplish blush under stressful conditions. Adapted to cool coastal climates and Eastern & Mid U.S. ***00345***

ABSOLUTE F1

70 Days. The perfect choice for a main season fresh market variety. The self-wrapping habit offers good protection to dense, domed, bright white heads. Excellent uniformity and wide adaptability are regularly noted. ***00344***

APEX F1

70 Days. Apex offers proven performance in the Northeast, producing high domed, smooth heads with excellent holding ability. The vigorous plants have upright jacket leaves with exceptional internal wrap. Recommended for fall harvest. ***00332***

FLAMENCO F1

72 Days. A great choice for late summer and fall production. Strong plants provide good cover to the high, bright, white domed heads with dense curds. Exceptional flavor and raw eating quality make Flamenco a great choice for fresh market. ***12604***

AQUARIUS F1

75 Days. Uniform pure white heads achieve good weight with refined smooth curds. Strong erect plants produce firm round heads with strong tolerance to summer curd hairiness when moving from warm to hot seasons. Also performs well when planted for fall harvest. ***11988***

C5063 F1

75 Days. A strong, heat tolerant variety, C5063 produces dense, tight heads with small curd on a compact plant that performs well at higher plant populations. Tight inner wrap leaves protect the bright white, high domed heads. This well adapted variety can be planted in multiple slots and harvested through the fall in the Northeast. ***13872***

TWISTER F1

75 Days. Twister produces tight, heavy heads with exceptional internal wrap and bright white color. Well adapted across growing climates with a very uniform harvest. Medium plants produce medium-large heads well-suited to boxing. ***12996***

SKYWALKER F1 ORGANIC

80 Days. Heavy heads with self-wrapping leaves make this an easy variety to grow. Uniform milky white curds are tight and ideal for fresh market or CSAs. Best for late summer or fall seasons. ***12541***

SKYWALKER F1 ORGANIC

All-America Selections Winner · Grower Favorite · 2027 Introduction

SPECIALTY CAULIFLOWER

DEPURPLE F1

68 Days. Lavender. Vigorous plants offer good protection to dense dome-shaped heads. Performs consistently under different environmental conditions. ***12763***

CLEMENTINE F1

70 Days. Orange. High quality firm curds have a deeper orange color than Cheddar and Flamestar and are excellent for fresh market and processing. Vigorous plants are medium-sized and show great field holding ability. ***13031***

VERONICA F1 ORGANIC

77 Days. Romanesco. Attractive green heads have earthy flavors when eaten fresh, and after cooking curds become sweeter and hold their color and structure well. High resistance to Fusarium Yellows. ***12542***

FLAME STAR F1

80 Days. Orange. Medium plants produce heavy heads of smooth dense high quality curds. Paler orange than Cheddar. Good tolerance to heat and stress. ***12764***

GRAFFITI F1

85 Days. Purple. Large plants produce a true cauliflower head with deep purple color and dark green leaves. Best for fall harvest but can also be grown in spring. Adapted to cool coastal climates and Eastern & Mid U.S. ***00346***

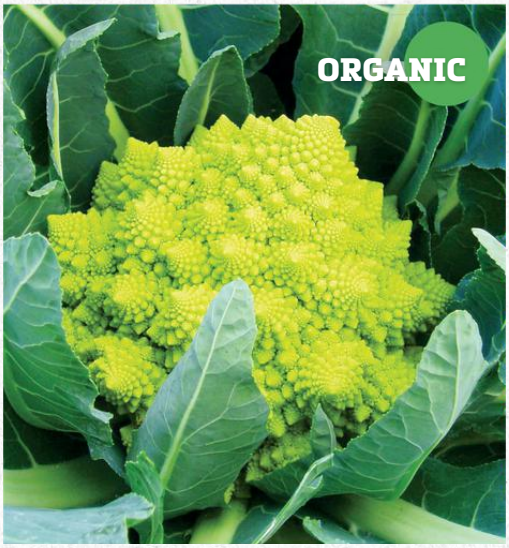

DEPURPLE F1

CLEMENTINE F1

FLAME STAR F1

VERONICA F1 ORGANIC

GRAFFITI F1

CELERY

TANGO ORGANIC

85 Days. Very smooth stalks produce heavy yields with excellent eating quality and no stringiness. Medium-tall 18-20" plants are self-blanching. ***12371***

TALL UTAH 52/70R IMPROVED

90 Days. Produces dark green well-rounded firm stalks from erect 20-24" plants. Best for early spring or later summer plantings that mature during cooler growing periods. Stores well for winter sales. ***11994***

SWEET CORN

Culture: Sweet corn prefers well-drained soils with a pH of 6.0-6.8 and a 2-1-1 fertilizer ratio. First plantings can be covered with clear plastic for a quicker start, allowing gains of at least 1 week of maturity; slit the plastic when warm weather arrives. Corn should be planted in blocks to achieve complete pollination. An average planting density is 20M seeds per acre, with 9-12" spacing in-row and 30-36" spacing between rows. See the Vegetable Seed Planting Guide in the back of the catalog for additional planting information. Varieties of the same genetic type can be planted beside each other; refer to the guidelines below to determine whether isolation is necessary for your chosen varieties. Isolation of varieties with different kernel colors is recommended for best results. Yellow kernel color is dominant, so yellow varieties will always have yellow kernels; white or bicolor varieties cross pollinated by a yellow variety will have greater incidence of yellow kernels. Harvest at perfect maturity for top quality and repeat sales.

Disease Resistance: Diseases have troubled sweet corn crops for many years. Fortunately, sweet corn breeders have made great strides in developing varieties with high or intermediate resistance to many common diseases. When selecting varieties, look for those that have a strong resistance package for the diseases common to your area. A complete listing of our varieties and their disease packages can be found in the Quick Reference Chart on page 45.

TOP 10 SWEET CORN VARIETIES

If you are not sure of which sweet corn varieties to grow, pay attention to your fellow growers! These varieties are their favorites based on quality, performance, and customer satisfaction.

1. Kate
2. Kickoff XR
3. Rosie
4. Superb MXR
5. Matriarch Attribute II
6. Anthem XR II Performance
7. Bolt XR
8. Montauk
9. Awaken
10. Obsession II Performance

Sweet Corn Genetic Type Compatibility And Isolation: Isolation is essential to achieve anticipated sweet corn quality. To avoid cross pollination, seperate genetic types by:

- **At least 250 feet**
- **An effective wind break**
- **At least 10 -14 days maturity**

Genetic types connected by yellow lines can be planted next to one another.

su

Standard Sugary (su)

- Traditional sweet corn genotype (su gene)
- Germinate well at cool temperatures
- Sugars convert to starch quickly after harvest

Field Corn
Ornamental Corn
Popcorn

se — sy

Sugary Enhanced (se)

- Sugary enhancer (se) gene
- Improved sweetness, flavor, tenderness, moisture retention, and quality over su types
- Heterozygous se = 75% su + 75% se kernels
- Homozygous se = 100% se kernels
- Good cool soil germination and vigor

Synergistic (sy)

- 75% se and 25% sh2 kernels
- Tender kernels with high sugars
- Long shelf life
- Germination and vigor similar to se

sh2 — shA

Standard Supersweet (sh2)

- shrunken-2 (sh2) gene raises levels of complex sugars and extends flavor
- Slow conversion from sugar to starch
- Long shelf life and moisture retention
- Crunchier and firmer kernal type
- 60-65°F optimal soil temperature for germination

Augmented Supersweet (shA)

- se gene + sh2 gene
- Combines tender, high moisture kernel of se types with the high sugar and slow conversion to starch of sh2 types
- 60-65°F optimal soil temperature for germination

All treated sweet corn seed is treated with Cruiser, a protectant with numerous benefits.

1. Protects against flea beetles up to the five true-leaf (V5) stage, lessening transmission of Stewart's Bacterial Wilt.
2. Minimizes stand loss due to wireworm, seed corn maggot, and other secondary pest damage.
3. Provides contact and systemic protection.
4. Pre-treated seed provides efficient and easy-to-use seedling protection against insect pests. Please note: does not protect against corn borer or earworm.

BICOLOR SWEET CORN

HIGH QUALITY AUGMENTED SUPERSWEET BICOLORS

Please note: To ensure eating quality, isolate plantings of supersweet corns from all other genetic types. *See page 30 for more information.*

BOLT XR F1

67 Days. Bolt XR is a first early bicolor supersweet with excellent quality, husk coverage, and tip fill. With very good sweetness and flavor, a 7" ear, and a medium-dark green husk, Bolt XR is a great choice for roadside stands and farmers' markets. Intermediate resistance to Common Rust (RpG). ***13162***

AWAKEN F1

68 Days. A first-early bicolor supersweet variety with a main-season plant type, husk package, and ear appearance. The large 7½" ears have good tip fill, 16 rows, and good field holding ability, and are suited to both roadside and shipping markets. Awaken has shown excellent early season vigor and cold soil emergence, and the plants have high resistance to Common Rust (RpG). For best results, avoid planting on low-input or light soils. ***13496***

DASH F1

68 Days. A first-early bicolor supersweet with good eating quality and ear size, complementing its seedling and plant vigor. Dash has a 7½" ear with 16 kernel rows, bright kernel color, and straight rowing. A strong season-starter with good field holding ability. IR to MDMV, NCLB, Rust, and Stewart's Wilt. ***13947***

KICKOFF XR F1

69 Days. Kickoff XR offers excellent seedling vigor and superior eating quality and ear size. Tender sweet bicolor kernels fill the 7¾–8" ears with 16-18 kernel rows. Ears are held at 28" off the ground on sturdy 6' plants with an attractive husk package that offers ample flags and protects the ear well over the tip. High resistance to Rust (Rp1-G). ***12323***

SOLSTICE F1

70 Days. A high quality Augmented supersweet with early maturity and strong seedling emergence. The 7½–8" ears have 16 rows of attractive bicolor kernels and strong tip fill. Ears are set at 20" on 5½–6' plants that have intermediate resistance to NCLB. An attractive supersweet variety for early fresh market sales. ***12795***

HERO XR F1

71 Days. With its strong seedling vigor, Hero XR is an excellent choice for a first early. The 7¼-7¾" ears offer 14-18 rows of tender sweet kernels. The ears are held at 23" on clean sturdy plants, and are protected by an attractive dark green husk package. High resistance to Rust (Rp1-GDJ). ***12615***

IGNITION F1

72 Days. Rapid emergence, strong plant, and high yield potential are trademarks of Ignition. The 8" ears are held high on the plant and offer 16-18 rows of glossy refined well-filled kernels. With high ratings for tenderness, sweetness and holding ability, Ignition is a strong season-starter. ***12974***

HIGH-QUALITY AUGMENTED SUPERSWEET BICOLORS (CONTINUED)

Please note: To ensure eating quality, isolate plantings of supersweet corns from all other genetic types. *See page 30 for more information.*

RAQUEL F1

72 Days. This high quality augmented supersweet bicolor offers excellent field holding ability and yield potential. Large 8-8½" ears are produced on clean, sturdy 6' plants and fill well to the tip with 16-20 rows of bright white and deep yellow kernels. The ears are tightly covered with an attractive deep green husk and excellent flags. A top choice for roadside growers with a deep kernel and balanced flavor. ***12321***

SIGNATURE XR F1 IFSI Reserve™

72 Days. Signature XR offers a combination of superior eating quality and top agronomic performance. Expect excellent tenderness and sweetness paired with an attractive dark green husk and Common Rust (Rp1-GDJ) resistance. A favorite from our trials and a sure hit with consumers. ***12858***

ANTHEM XR F1

73 Days. Anthem XR was a real standout in our trials with large 7¾–8" ears, great eating quality, strong tip fill, and excellent tenderness and sweetness. The ears are set at 20" high on 5' plants that have high resistance to Rust (Rp1-G), are covered with a dark green husk, ample flags and snap easily from the plant. 16-18 rows of very straight yellow and white kernels fill the ear and offer excellent yield potential and quality. ***11410***

ROSIE F1

74 Days. Compared to other mid-season bicolors, Rosie has superior eating quality and excellent field holding ability. Strong, clean, 6' plants set their beautifully refined ears at 24". The attractive 7¾-8¼" ears have standout eating quality, 16-18 rows, and a very clean and bright white and yellow kernel color. The husk package is dark green and covers the ear tightly and well over the tip. ***12322***

SPRITZ F1

74 Days. This mid-season bicolor supersweet variety offers the excellent eating quality, husk package, and holding ability expected from the Quality Elite series, with the addition of high resistance to Common Rust (Rp1-GFJ). Ears pick cleanly with a short shank, have a uniform shape, and measure 7¾" long with 16-18 kernel rows. ***13226***

SUPERB MXR F1

74 Days. A strong-yielding bicolor supersweet with the ability to handle difficult growing conditions, Superb MXR has large 7½-8" ears, determinate tip fill, and excellent husk length and protection for reliable performance. Ears have Xtra-Tender™ eating quality and pick easily from strong plants with resistance to MDMV and Common Rust (RpG). Superb MXR is flexible for mid to late season plantings, and a great choice for both fresh and shipping markets. ***13376***

XTRA-TENDER™ 274A F1

74 Days. This Xtra-Tender bicolor offers superb eating quality and tenderness. Very refined 8" ears are produced on sturdy plants with few tillers and have 18-20 rows of nicely contrasting yellow and white kernels. A dark green husk with long dark green flags covers the tender sweet kernels well over the tip. ***00165***

Nirvana

MERIDIAN

All-America Selections Winner · Grower Favorite · Quality Elite™ Sweet Corn · Nirvana Sweet Corn Series · Meridian Sweet Corn

XTRA-TENDER™ NATURAL SWEET XR F1 ORGANIC

74 Days. The excellent eating quality and flavor of this variety will have your customers, family, and friends asking for it by name! A great mid-season choice for both fresh and shipping markets, expect strong seedling vigor, excellent quality from refined ears, and an attractive and protective husk package. ***12717***

EPIPHANY F1

75 Days. A standout introduction to the Nirvana Series, Epiphany offers exceptional taste and texture paired with elevated germination, harvest, ease and disease resistance. The 8" ears have 16-18 kernel rows and are held at 24" on the plant. With quality that holds and high resistance to NCLB, MDMV, and Common Rust, Epiphany makes a great addition to mid-season line-ups. ***12969***

NIRVANA F1

75 Days. High yields and high quality taste offer growers the best of both worlds. 8" ears are set at 26" on sturdy and clean 6½' plants. The easy to snap ears have a dark green husk package that protects the tip well, and plentiful dark green flag leaves. Nirvana's ears have strong tip fill and 16-18 rows of yellow and white kernels. ***11912***

FLAGLER F1

76 Days. A high yielding bicolor supersweet with 8" ears borne on strong well adapted plants that have high resistance to Rust (Rp1-G). This addition to the Quality Elite™ line-up features 16-18 rows of vibrantly contrasting kernels protected by an attractive husk package with nice flag leaves and a short shank. ***12793***

M1 F1

76 Days. This Meridian brand bicolor is great for both roadside stands and shipping with Mirai-style sweetness and tenderness. The 7½-8" ears fill well to the tip, have a tight dark green husk, and short shank. Ears pick easily at full maturity, and the straight, bright kernels resist denting in the field and postharvest. M1 kernels have a unique texture that doesn't stick in your teeth when eating, but is strong enough to handle machine harvesting and shipping. A strong performer in Northern regions. ***13712***

MARQUEE F1

76 Days. A highly uniform and reliable bicolor supersweet for use across growing regions and market applications, Marquee is a mid-season headliner. The 7½" ears are held high on the plant with 16-18 rows of straight high-quality kernels. Determinate ears have excellent tip fill, offering growers an attractive ear for both roadside and tray pack use. Marquee maintains excellent field holding ability for harvest flexibility and has HR to Rust (RpGDJ) and IR to MDMV and NCLB. ***13542***

TROUBADOUR XR F1 *IFSI Reserve™*

76 Days. This mid-season bicolor offers the ideal ear size and shape for roadside stands, as well as exceptional IFSI Reserve eating quality. The 7½ - 8½" ear has 16-18 kernel rows filled to the tip and protected by a medium green husk. Plants are tolerant to lodging and have high resistance to Rust (RpG). ***13042***

CUMBERLAND F1

77 Days. This bicolor demonstrates great yield potential from its 5½' plant with 8" ears that are easy to harvest and bicolor kernels that fill well to the tip. A medium-dark green husk with ample flags offers good tip cover protection. Ears with 16-18 rows of kernels fill well and have superb eating quality. High resistance to Rust (Rp1-G). ***12140***

GSX 704BC F1

77 Days. A high-quality bicolor supersweet with a very tender kernel, good sugars, and nostalgic sweet corn flavor, 704BC is an excellent roadside variety from the Meridian brand. The tightly covered ears are held high on strong, healthy 6' plants for hand or machine picking. Straight rows of bright contrasting kernels reliably fill out the ear and resist denting in the field and postharvest. ***13941***

KATE F1

Exceptional sweetness

77 Days. Kate is a high-yielding 77 day bicolor with standout eating quality. Ears are 7½" with 16-18 kernel rows of tender, glossy, refined kernels with excellent cover. Strong plants hold ears at 24" and offer high resistance to Rust (Rp1-G). Kate's outstanding traits earned it a place in the Quality Elite™ series. **Note:** Kate has a tendency for oval tips in some stressful environments. This has not been a concern for roadside growers. ***12320***

M3 F1

77 Days. A widely adaptable variety for roadside markets, M3 offers Mirai-style sweetness and a tender, clean bite. The 7½-8" ears pick easily at full maturity and have an attractive dark green husk with good flag leaves and tight cover. Expect reliable tip fill, 16-18 straight rows of bright, contrasting kernels, and strong field and post-harvest holding ability characteristic of the Meridian brand. ***13713***

COSMIC F1

78 Days. A late-season supersweet with tolerance to Northern Corn Leaf Blight, Cosmic is a high-yielding variety with large ears, outstanding flavor and a tender bite. Ears are held high on the plant, measure 8½" long with 18-20 rows, demonstrate good tip fill, and have a dark green husk package. High resistance to Rust (RpG) and strong tolerance to NCLB. ***13535***

CRAVE F1

78 Days. This well-adapted variety offers 8" ears with vibrant tender kernels in 16-18 rows. The attractive ears are protected by equally appealing husks with dark flag leaves and long tip cover. The large ear and great eating quality hold strong consumer appeal. ***12924***

OCTANE F1

78 Days. This late season supersweet has very high sugars and exceptional quality that holds well on the plant and after harvest. Ears are 8" long with 16-18 rows of glossy tender kernels. ***13067***

All-America Selections Winner · Grower Favorite · Quality Elite™ Sweet Corn · Nirvana Sweet Corn Series · Meridian Sweet Corn

MIDNIGHT F1

79 Days. With high sugars, delicious corn flavor, and a tender, clean bite, this 79 day bicolor supersweet is a great choice for roadside and fresh market sales. It performs well in a range of climates and has shown reliable tip fill under adverse conditions. A Meridian brand variety, Midnight has consistent yields, bright and straight kernel rows, and strong field holding ability. It has a slender ear and top eating quality when allowed to mature fully. We recommend waiting to harvest for 2-3 days after kernel color darkens. ***13928***

CRAVE MAN F1

80 Days. A compliment to Crave with slightly later maturity, Crave Man finishes the season with high eating quality, flavor, and tenderness. The 7½" ear is well protected by a strong husk package and has 20 rows of refined bicolor kernels. Performs best at 25,000 plants per acre. Intermediate resistance to Common Rust (Rp1-D, Rp1-G). ***13219***

GSH4010BC F1

80 Days. Dual-purpose bicolor 4010 is a dependable supersweet with good eating quality and excellent tip fill under stressful conditions. It offers a great husk package with tight cover and a short shank that handles mechanical harvest well. Ears are 7¾" with 16-18 rows of straight bright kernels that hold up to shipping but also meet quality expectations for roadside stands. ***13938***

SKYRAY F1

80 Days. Skyray brings excellent eating quality, field holding ability, disease resistance, and husk package to the late-season slot. The 8" ears are large with 18-20 rows of tender, high-quality bicolor kernels. Ears have great tip fill and cover and are set at 26" on 6' plants that carry high resistance to Rust (Rp1-GDJ) and intermediate resistance to Sw and NCLB. ***13263***

STAMINA MXR F1

80 Days. This bicolor supersweet has exceptional Xtra-Tender™ eating quality, strong tip fill and cover, and a reliable disease package for late-season roadside sales. Ears are set high in the plant and reach 7½-8¼" long with 16-18 kernel rows. High resistance to MDMV, NCLB, and Rust (RpG). ***13196***

HONEY 'N PEARL F1

LATTE F1

QUICKSTART F1

SWEETNESS F1

ESPRESSO F1

TEMPTRESS F1

EVOLUTION F1

EX08767143 F1

81 Days. Fondly known as 7143, this late-season bicolor supersweet is a proven variety for quality sweet corn that holds up to shipping. The 8" ears have an average of 18-20 kernel rows, 1.9" diameter, and an attractive husk package and flag leaves. The strong plants tolerate stress, resist NCLB, Sw, and Common Rust (Rp1D, RpG), and are well adapted to diverse conditions. ***13285***

STANDARD SUPERSWEET BICOLOR

HONEY 'N PEARL F1

75 Days. Superb eating quality, tender kernels, and exceptional sweetness are Honey 'N Pearl's claim to fame. 6' plants produce 8½" ears that have a cylindrical shape and fill well to the tip with 16-18 rows of bicolor kernels. The tight husk has a medium green color and showy flag leaves. Intermediate resistance to Rt, NCLB, SCLB and Sw. Plant standard supersweets in warm soil only (65°F+). ***11101***

SYNERGISTIC BICOLORS

LATTE F1

68 Days. An early maturing synergistic bicolor that has outstanding quality, with the sweetness, tenderness and flavor of many main season varieties. Its 5' 8" plant sets the 7½-8" ears at 20" with strong tip fill and 14 rows of yellow and white kernels. Intermediate resistance to Rt and Sw. Not recommended for planting in soil temperatures below 65°F. ***12188***

QUICKSTART F1

68 Days. Impressive seedling emergence and vigor are followed by strong plants and early maturity with QuickStart. The large 8" bicolor ears have excellent eating quality and flavor for the early season slot. Ears pick easily, have a good husk package, and are held at 22" on 6' plants with high resistance to NCLB and Sw. ***13243***

SWEETNESS F1

68 Days. This synergistic bicolor has excellent early season emergence and vigor. The 8" ears have high eating quality, solid tip fill, 14-16 rows, and a protective husk package that makes a nice presentation to consumers. The 6' plants hold their ears at 18" and offer intermediate resistance to NCLB, Rt, and Sw. ***12598***

ESPRESSO F1

70 Days. This synergistic bicolor produces 8-8½" ears and has a great plant type for an early variety. Its tender kernels fill the ear well to the tip in 14-16 straight rows and are covered with a tight husk and dark green flags. The sturdy 6' plants hold their ears at 20". Espresso has shown great cold soil tolerance and produces a large ear for early corn sales. Intermediate resistance to Rt and Sw. ***Use for early plantings only. Not recommended for use as a mid season filler. 11223***

TEMPTRESS F1

70 Days. Temptress rivals Temptation in all respects. It performs with strong emergence and seedling vigor for early plantings. The 8" ears have 16 rows of kernels with superior flavor and eating quality. The ears are set at 20" on sturdy clean 6½'plants. High resistance to Rust (Rp1-GDJ) and MDMV, and intermediate resistance to NCLB. ***12599***

EVOLUTION F1

72 Days. Evolution offers good cold soil emergence as well as the suite of benefits of a Synergistic Plus variety: enhanced sweetness and tenderness, extended holding ability, and a lengthened harvest window. The large ears are 8" long with 16-18 kernel rows and an attractive husk. ***13139***

All-America Selections Winner · Grower Favorite · Quality Elite™ Sweet Corn · Nirvana Sweet Corn Series · Meridian Sweet Corn

CUPPA JOE F1
73 Days. A synergistic bicolor with great quality and extremely high yield potential. Cuppa Joe has good cold soil tolerance and produces well-filled large 8-8½" ears with 14-16 rows of yellow and white kernels. The attractive dark green husk protects the ear well over the tip and has dark green flag leaves. Intermediate resistance to NCLB, Rt, and Sw. ***11224***

ALLURE F1
75 Days. Allure's large very attractive 8" ears are filled well to the tip with shiny yellow and white kernels. Ears are covered tightly with dark green husks bearing attractive flags, and ear length is excellent for a midseason variety. Expect a very tender kernel texture, good holding ability in the field, and outstanding yield potential. Clean sturdy 7' plants set their ears at 27" and offer intermediate resistance to Rt, and Sw. ***11225***

PROGRESSION F1
78 Days. This Synergistic Plus variety offers enhanced sweetness and tenderness, extended holding ability and a lengthened harvest window over standard synergistics. The large ears are 8-8½" long with 18-20 rows and strong tip fill. ***12975***

ESSENCE F1
79 Days. Anticipate very high yield potential and long 8-8½" ears with superb sweetness and creamy texture. The ears snap easily from the clean sturdy 7' plants, and an attractive husk package offers good tip cover and dark green flag leaves. The cylindrical ears have 16 rows of shiny bicolor kernels that fill well to the tip. Intermediate resistance to NCLB, Rt, and Sw. ***11226***

MONTAUK F1
79 Days. This grower favorite is known for its girthy, eye-appealing 8" ears, outstanding eating quality, and very high yield potential. An exceptional husk package with dark green flag leaves covers the tip well, and ears snap easily off the 6½ -7' clean and sturdy plants. The cylindrical ears are filled well to the tip with 16-18 rows of nicely contrasting yellow and white kernels. Intermediate resistance to NCLB. ***01108***

KRISTINE F1
80 Days. Kristine's refined slightly tapered 8½" bicolor ears have a fine eating quality and excellent sweetness. High yielding sturdy and clean 6¼' plants hold the ear at 16". Ears have strong tip fill, 16-18 rows of kernels, and are covered with a deep green husk and long attractive flags. Intermediate resistance to NCLB, Rt, and Sw. ***11128***

PRIMUS F1

GOLDEN GEM F1

PROVIDENCE F1

DELECTABLE R/M F1

PRIMUS F1

81 Days. Primus produces strong yields on its clean 6½' plants. The long 8" ears are held at 24" on sturdy plants, have an attractive husk, and offer 14-16 rows of bicolor kernels. Primus has high resistance to SCLB and intermediate resistance to Sw. ***11091***

PROVIDENCE F1

82 Days. Providence has superb eating quality that is suited for roadside and farm market sales. The 6½' plants hold the ear at 24" and have high resistance to Rust (Rp1-D) and intermediate resistance to SCLB. Refined 8" ears have 14-18 rows of bicolor kernels and good tip fill. The husk package is medium green with moderate flags and covers the tip well. ***00154***

SUGARY ENHANCED BICOLORS

GOLDEN GEM F1

80 Days. An exceptional improvement on Precious Gem, Golden Gem offers growers a large ear with a tender bite and even sweeter flavor. Ears are set at 24" on strong plants, and the dark green husk package has good flag leaves and offers ample tip cover. Intermediate resistance to NCLB, Rust, and Sw. ***13935***

DELECTABLE R/M F1

84 Days. This homozygous se bicolor produces 8½–9" ears set at 26" on 7' plants that carry a great disease package. The large bicolor ears have strong fill, a wonderful tenderness and taste, and are tightly wrapped with a dark green husk. Intermediate resistance to NCLB and Sw. ***01135***

WHITE SWEET CORN

SYNERGISTIC WHITES

ILLUSION F1

72 Days. For a synergistic, you'll find some of the best eating quality with this early season white. The slightly tapered 7½-8" ears are filled to the tip with very tender, superbly sweet, bright white kernels. The 14-16 row ears are set at 25" on sturdy clean 6½' plants, and they are covered with deep green husks and long attractive flags. Intermediate resistance to Rt and Sw. ***11227***

MIRAGE F1

79 Days. Refined 8-8½" ears with excellent sweetness and tenderness offer a very high yield potential. The ears are easy to snap off the 7' clean and sturdy plants, and the attractive husk package offers good tip cover and dark green flag leaves. The cylindrical ears have 16 rows of bright white kernels that fill the ears well to the tip. Intermediate resistance to NCLB, Rust (Rp1-D), and Sw. ***11419***

MATTAPOISETT F1

80 Days. Long 8" cylindrical ears that slightly taper have very sweet and tender kernels that fill the ear well to the tip in 16-18 straight rows. The ears are set at 18-20" on sturdy and clean 6½' plants. The dark green husk offers tight cover and good tip protection to the ears, and is covered with attractive flag leaves. Intermediate resistance to NCLB and Rt. ***11154***

SUGARY ENHANCED WHITES

SILVER KING F1

82 Days. This white homozygous se matures earlier than Silver Queen. Sturdy 6½' plants produce 8" ears with a 16-18 row count. Silver King picks easily and has intermediate resistance to NCLB, SCLB, Rt, and Sw. ***01172***

STANDARD SUGARY WHITES

SILVER QUEEN F1

88 Days. The variety that started the white corn excitement, Silver Queen is still very popular for its creamy quality kernels. Beautiful 8" ears with 14-16 kernel rows, tight dark green husks and ample flags are set very high on tall plants. High resistance to NCLB, Rt and Sw, and intermediate resistance to SCLB. Plant standard sugary varieties in warm soil only (65°F+). ***00134***

HIGH-QUALITY AUGMENTED SUPERSWEET WHITES

Please note: To ensure eating quality, isolate plantings of supersweet corns from all other genetic types. *See page 30 for more information.*

LEADOFF MXR F1

69 Days. This first early white complements Kickoff XR and Takeoff as a high quality variety with excellent seedling vigor, ear size, and husk protection. The bright white kernels have top sweetness and flavor and very good tenderness. Ears are held at 23" and reach 7¼-8" long with 16-18 rows. Resistance to MDMV and Rt (Rp1-GDJ). ***12972***

NATALIE F1

72 Days. Compared to other early season whites, Natalie has superior eating quality, better yield potential, and better field holding ability. Strong and clean 6' plants set their attractive ears at 24". The large 8-8½" ears have 16-20 rows and a very clean and bright white kernel color. The husk package is dark green and covers the ear tightly and well over the tip. High resistance to Rust (Rp1-G). ***12325***

EDEN RMN F1

74 Days. Eden RMN maintains the excellent traits of Eden with improved disease resistance. Its 8" bright white ears are set at 26" on sturdy clean 6½' plants and have exceptional quality and texture. Ears are easy to pick and hold well in the field with an attractive husk package. Intermediate resistance to Rust (RpGFJ), MDMV, and NCLB. ***13124***

ENDURANCE MXR F1

74 Days. A reliable mid-season variety that performs in a range of conditions, including disease and heat stress. Endurance MXR sets large 7½-8" ears with 16-20 rows of bright white kernels with very good sweetness and tenderness. An exceptional husk package and strong field holding ability make it a great choice for both fresh and shipping markets. The 6' plants set their ears at 28" and offer intermediate resistance to MDMV and Rust (Rp1-G). ***13052***

XTRA-TENDER™ NATURAL BRIGHT XR F1 ORGANIC

74 Days. As a sister line of Natural Sweet, this is the best white supersweet variety now available organically. Expect excellent seedling vigor and strong lodging resistance. The ample husk cover offers insect protection and consumer appeal on the stand. Resistance to Common Rust (RpG). ***12830***

MAGNOLIA MXR F1 IFSI Reserve™

75 Days. This mid-season white supersweet has top eating quality paired with excellent agronomics like high ear placement and lodge resistance. Expect high yields of 7½-8" ears with 16-18 kernel rows, bright white color, reliable tip fill, and medium to dark green husks. Magnolia MXR's exceptional sweetness, flavor, and tenderness are sure to make it a customer favorite. High resistance to MDMV and Common Rust (RpGDJ). ***13532***

SEABRIGHT F1

77 Days. A white supersweet with a strong plant and rust resistance for the main season planting slot. Seabright produces high-quality ears with 16 kernel rows, good tip fill, and a consistent 7¾-8" length suited for shipping or roadside. Tidy plants hold ears high and offer high resistance to Common Rust (RpG). ***13227***

CORONADO F1

78 Days. This widely adaptable variety has all of the traits expected of the Quality Elite™ line. Strong plants have high resistance to Rust (Rp1-G) and great yield potential with large 7¾-8¼" ears. Short shanks allow for easy harvest of ears with an attractive husk and flags. Vibrant white kernels are set in 16-18 rows and offer high eating quality for fresh market sales. ***12794***

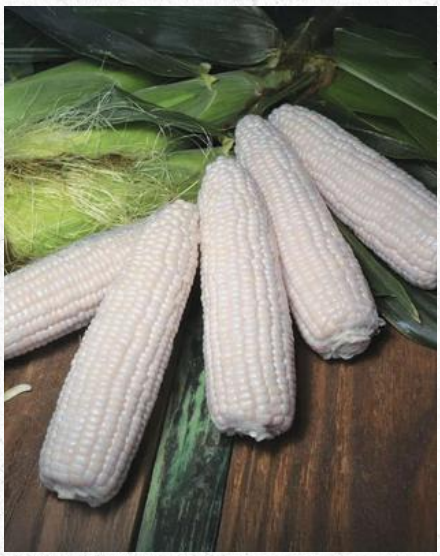

GLACIAL F1

79 Days. This incredible white corn has outstanding eating quality. Its 8" ears are set at 20" on sturdy and clean 6' plants. The ears are easy to snap and have an attractive dark green husk package that offers excellent tip cover and dark green flag leaves. Glacial's ears have great eye-appeal, with excellent white kernel color that stays white, and the kernels fill well to the tip in 16-18 rows. ***11911***

PLATINUM XR

80 Days. Bright white kernels stand out against the dark green husks of Platinum XR. With flavorful Xtra-Tender™ eating quality and 7½-8¼" ears with 16-18 kernel rows, this full-season variety is a great choice for both fresh markets and processing. Intermediate resistance to Rust (RpGDJ) and NCLB. ***13051***

69 Days. An Improvement on Takeoff, Takeoff MXR carries additional resistance to MDMV and Rust. This yellow augmented supersweet provides strong seedling vigor, superior eating quality, and an impressive ear shape and size in the early slot. The 16-18 rows of tender sweet bright yellow kernels fill 7¾-8½" ears which are held 28" off the ground on sturdy 6' plants. Its good-looking husk package offers plentiful flags and protects the ear well over the tip. ***13129***

ICON XR F1 IFSI Reserve™

72 Days. Icon XR has exceptional eating quality with notable tenderness and sweetness. The 7½-8¼" ears have reliable tip fill (even in stressful conditions) improved husk protection, and extended field holding ability. Icon XR is a perfect choice for fresh market sales and roadside stands. Intermediate resistance to Rust (RpG). ***13054***

VISION MXR F1 IFSI Reserve™

73 Days. The breeder of Vision has incorporated resistance to the new strain of Rust (Rp1-GDJ) and MDMV into Vision MXR, while maintaining the same outstanding eating quality and sweetness that Vision is known for. Its 7½-8" ears fill well to the tip and are set at 20" on sturdy and clean 5½' plants. Ears are easy to snap and have an attractive dark green husk package that offers excellent tip cover and dark green flag leaves. ***11837***

4974 VX F1

73 Days. This mid-season yellow supersweet offers growers Xtra-Tender™ eating quality with a consistent 7½" ear and strong husk package suited to shipping. Ears pick easily with an attractive dark green husk, good flag leaves, and 16-18 kernel rows. Sturdy plants hold ears at 23", are reliable across growing environments, and have intermediate resistance to MDMV. ***13457***

CANDICE F1

74 Days. This high quality augmented supersweet brings top eating quality, excellent field holding ability, and high yield potential. Its 7½–8" ears are produced on clean strong 6' plants, have strong fill and 16-18 rows of refined rich yellow kernels. The ears are tightly covered with an attractive deep green husk and excellent flags. ***12327***

SUMMER CELEBRATION F1

74 Days. Summer Celebration has a uniform 7½" ear with 16-18 rows of bright yellow kernels. A part of the Quality Elite Series, it has excellent supersweet eating quality, extended field holding ability, and an attractive husk package. Tall plants stand strong against lodging and carry intermediate resistance to MDMV. ***13074***

ELLE F1

78 Days. Offering a refined ear shape and kernel style with eating quality to match, Elle is sure to gain customer favor. The 7½-8" ears are produced on strong adaptable plants with high resistance to NCLB. Ears have strong fill and the 16-18 rows of high quality-glossy yellow kernels are protected by tight, dark green husks. Good field holding ability. ***12603***

All-America Selections Winner · Grower Favorite · Quality Elite™ Sweet Corn · Nirvana Sweet Corn Series · Meridian Sweet Corn

MOONSHINE F1

78 Days. Moonshine is a full season yellow supersweet that has very good early season seed vigor and excellent yield potential. It produces short-shanked, well-filled 8" ears with 18 rows of bright yellow deep kernels on strong 7' plants. The attractive medium-dark green husk protects the ear well over the tip and has plenty of dark green long flag leaves. Intermediate resistance to Rust (Rp1-D), Sw, and NCLB. ***12350***

MOONSHINE F1

MOONSTRUCK F1

78 Days. Moonstruck is an improvement on Moonshine with added rust resistance for a strong late-season yield. Ears are held 25" high on tall plants with tight husk cover and medium flags. The 8 ½" ears have 18-20 kernel rows and excellent sugars, making Moonstruck great for freezing. ***14062***

MOONSTRUCK F1

GSH3005Y F1

82 Days. A standout variety in the Southeast U.S. for shipping and tray pack markets. 3005 sets strong yields on medium, sturdy plants with a uniform ear height that is suitable for machine harvest. It has good tip fill and tight husk cover for a quality wholesale product. HR to Common Rust and NCLB and IR to MDMV and SCLB.***13937***

GSH3005Y F1

SC1336 F1

83 Days. An adaptable late season supersweet that produces well- filled ears with 18-20 rows of bright yellow kernels. Ears are well protected with a dark green husk and average 8" long with a good barrel. Consistent size, quality, and tip fill make SC1336 a reliable shipping variety. High resistance to Rust (RpG). ***13286***

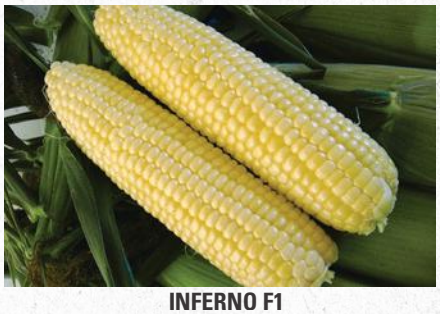

SC1336 F1

SYNERGISTIC YELLOWS

INFERNO F1

73 Days. You'll find some of the best eating quality with this early mid-season yellow synergistic. Its 7½-8" ears are produced on sturdy compact 5¾' plants that set their ears at 20". Dark green husks and plentiful flags offer excellent cover to the ears that have 16-18 rows of sweet and tender kernels. Intermediate resistance to Rust (Rp1-D) and Sw. ***12319***

INFERNO F1

GOLD STANDARD F1

78 Days. This mid-season yellow synergistic offers strong emergence and a vigorous 6' plant that holds its ears at 28" high. The Quad Sweet eating quality gives it extra sweetness, and the 8" ears have 18 rows of beautiful golden yellow kernels. Intermediate resistance to NCLB. ***13255***

Organic Harris Seeds Exclusive 2027 Introduction

Harris Seeds
EXCLUSIVE

BUILT FOR PERFORMANCE. GROWN FOR FLAVOR.

With 70 years of combined breeding and sweet corn knowledge, Chief Genetics takes a hands-on approach to developing products that respond to real-world grower needs. The Chief Genetics lineup includes premium roadside-market varieties selected for outstanding quality, and shipping varieties bred to meet the demands of commercial production and distribution.

Chief Genetics has partnered with Harris Seeds to bring these exclusive varieties to the sweet corn market. Contact our team for additional information or product support.

BIOTECH SWEET CORN

What is Biotech Sweet Corn and how is it different from conventional varieties?

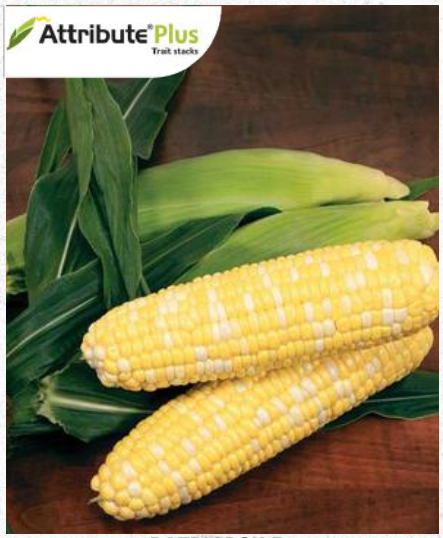

Biotech sweet corn has been bioengineered to exhibit specific traits that are not found in conventional varieties, including resistance to insect pests and tolerance to specific formulations of herbicide. These traits result in plants with strong inherent protection to insect pests, particularly lepidoptera species, with reduced use of insecticides, as well as greater flexibility in weed management.

BICOLOR SUPERSWEETS

ANTHEM XR II F1

73 Days. An improvement of Anthem II, Anthem XR II carries additional resistance to Rust and slightly larger ear size. An excellent choice for an early supersweet with high quality and the benefits of Performance Series® protection. ***12906***

MATRIARCH F1

78 Days. A bicolor supersweet with the benefits of Attribute®II pest protection and flexible herbicide tolerance, Matriarch is a standout. The 8" ears have a strong husk package with good tip cover and flags, and 20 rows of refined, high-quality kernels. Matriarch performs well at higher planting populations and carries intermediate resistance to Rust (Rp1-G, Rp1-D). ***13218***

PATRIARCH F1

78 Days. This bicolor supersweet sets a robust ear with excellent tip-fill and outstanding kernel color and tenderness. Ears are protected by a dark green husk, as well as Attribute® Plus level of lepidopteran protection, and a strong disease package. High resistance to Rust (Rp1-G) and intermediate resistance to NCLB and MDMV. ***12867***

OBSESSION II F1

81 Days. This late season supersweet combines top eating quality, good tip cover and attractive husk package with Performance® Series pest control and herbicide tolerance. Large ears are easy to pick and have great holding capacity. High resistance to Common Rust and intermediate resistance to Stewart's Wilt and NCLB. ***12816***

SV9010SA F1

81 Days. A Performance® Series variety offering excellent eating quality and good shipping ability, SV9010SA has high yield potential for 8" ears with 18-20 kernel rows. Plants have high resistance to Rust and intermediate resistance to NCLB, and Stewart's Wilt. ***12900***

How it Works: Insect Protection

Proteins derived from the soil bacterium Bacillus thuringiensis (Bt), are effective in controlling lepidopteran insect pests. When consumed, these proteins bind to the insect's mid-gut membrane and create pores that ultimately result in insect death. Biotech sweet corn has been developed to produce these proteins, and effectively resist damage from several insect pests. The exact spectrum of control of these insects depends on the traits of each specific variety. See table on page 49.

How it Works: Herbicide Tolerance

Broad-spectrum herbicides provide excellent control of weeds in a variety of crop production systems; however, their use is limited in Sweet Corn production due to the risk of crop damage. Certain Biotech Sweet Corn varieties can tolerate the active ingredients of these herbicides by breaking down the chemistries involved into non-effective components. Therefore, chemistries such as glyphosate and glufosinate can be applied for weed control without causing unintended harm to the crop. The exact tolerance to herbicide compounds depends on the traits of each specific variety. See table on page 49.

BICOLOR SYNERGISTICS

QUICK TRIP F1

71 Days. The earliest variety in our Biotech Program, Quick Trip boasts great TripleSweet eating quality, large ear size, and good tip fill. Attractive dark green husks protect the ear and present well at market. Proven performance in the Northern U.S. and strong pest protection through the Attribute®II trait stack. ***12976***

TEMPTATION II F1

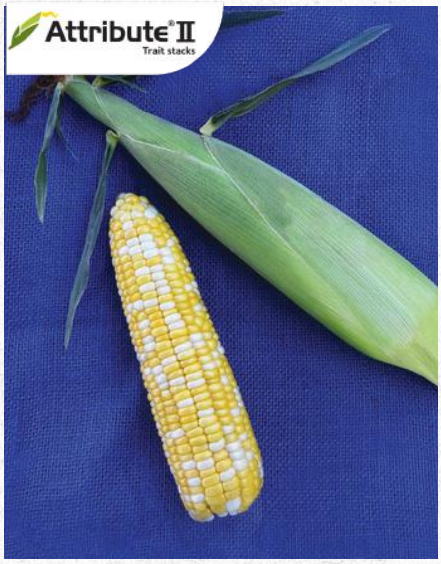

72 Days. This early bicolor shows reliable cold-soil seedling vigor and high yield potential. Expect great eating quality, good tip fill and ample husk cover from Temptation II, in addition to Performance® Series levels of pest protection and herbicide tolerance. ***12704***

REVISION F1

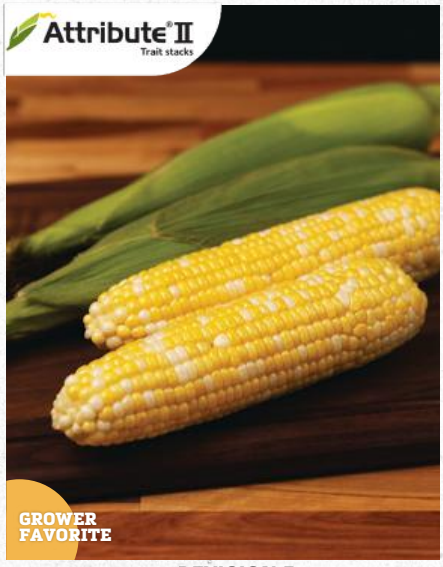

76 Days. Revision is a synergistic bicolor variety with TripleSweet eating quality and an attractive husk package. The Attribute®II trait package lends broad-spectrum protection to several lepidopteran pests as well as tolerance to both glufosinate and glyphosate herbicides. ***13292***

SV9014SB F1

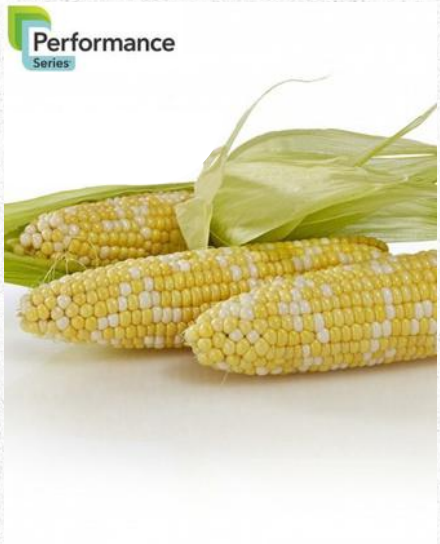

77 Days. Strong, compact plants set attractive ears with 16-18 rows of high quality kernels. High resistance to Rust, and Performance® Series traits for pest protection and herbicide tolerance offers flexibility for management of late season plantings. ***12809***

Interested in Purchasing Biotech Sweet Corn?

All orders require completion of the appropriate Stewardship Agreements and a Grower License Number on file before shipment will be made. These Stewardship Agreements confirm that you understand the benefits provided by Biotech varieties as well as the importance of following best management practices to ensure their functionality in future years.

To complete these Stewardship Agreements and receive the license numbers required to complete your order, please visit *www.agcelerate.com* and follow the instructions provided there to register as a grower. Performance® Series varieties require a completed Bayer Technology Stewardship Agreement, and Attribute® Series varieties require a completed Attribute Sweet Corn Grower Agreement. We recommend completing both agreements so that you'll be set up to purchase any variety of Biotech Sweet Corn.

Upon registration you will receive a Grower License Number specific to each brand. These license numbers will be effective for any future purchases of Biotech varieties through any dealer, and they do not expire.

Once you have your license number(s), contact your Harris Seeds Account Manager or call our Customer Service Department at 800.544.7938 to have the license number added to your account information. Then you will be eligible to order and receive shipment of Biotech Sweet Corn varieties.

Idaho and Oregon growers who plan to plant Performance® Series varieties must order seed directly through Seminis Vegetable Seeds, Inc. and complete all required reporting. Oregon growers may encounter additional restrictions on the planting of Biotech Sweet Corn; contact your local extension office for more information.

WHITE SUPERSWEET

STARFIGHTER II F1

79 Days. A supersweet white with excellent flavor and eating quality, 8" ears suited to both roadside and shipping markets, and the Performance® Series trait stack for pest protection and glyphosate tolerance. Ears are well protected by a strong husk package and are easy to pick by hand or mechanically. High resistance to Rust (Rp1-D) and intermediate resistance to NCLB. ***13204***

YELLOW SUPERSWEET

CROWN F1

78 Days. A supersweet yellow variety with uniform ears and strong adaptable plants that carry the Attribute®Plus level of insect protection and glufosinate tolerance. The ears average 8" long with 16 kernel rows, protected by a strong husk package with plenty of tip cover and attractive flag leaves. Crown's sweet flavor and tender pericarp make it a great choice for roadside and fresh market sales. ***13313***

PROTECTOR F1

79 Days. This well-adapted variety provides consistently high yields of uniform ears with great tip fill, rowing, and husk cover. The ears are suited to both fresh market and shipping and have supersweet quality. With a combined front of the Attribute®II trait stack and a strong disease resistance package, Protector offers continual profit opportunities for growers. High resistance to NCLB, SCLB, Common Rust (Rp1-D, Rp1-I), Stewart's Wilt, and MDMV. ***12493***

WHITE SYNERGISTIC

MILKY WAY F1

82 Days. This TripleSweet white boasts consistent yields and high eating quality along with the Attribute®Plus suite of traits. Protection against a range of lepidopteran pests, as well as tolerance to glufosinate, offers flexibility in weed and pest management. ***12865***

MILKY WAY F1

All-America Selections Winner · Grower Favorite · Quality Elite™ Sweet Corn · Nirvana Sweet Corn Series · Meridian Sweet Corn

When managed in accordance with the Stewardship Agreement guidelines, Biotech sweet corn can be a valuable addition to your crop management strategy for many years to come.

Biotech sweet corn is a valuable Integrated Pest Management (IPM) tool that, when combined with other practices in a multifaceted program, will contribute to pest control, preserve ecological diversity, and reduce overall production inputs. While these technologies have been proven highly effective against pest species, it is important to incorporate additional methods of pest population control including crop rotation, tillage, and targeted use of chemical insecticides to manage any insect outbreaks.

It is important to scout for and target these outbreaks, as they may lead to resistant populations that are no longer controllable by the available methods. Insect resistance is a real possibility and should be taken seriously. Each of us, from the grower to the seed industry, has a responsibility to manage this new technology carefully to preserve its long-term value for growers, consumers, and the environment. If you observe unexpected damage from pests typically controlled by Biotech technology, please contact your Account Manager.

BROOM CORN MIXED COLORS

EARLY PINK

FIRECRACKER

CHERRY BERRY

STRAWBERRY DE-LITE

BROOM CORN

MIXED COLORS

120 Days. Tall plants set seed heads in shades of red, deep brown, purple, and other tones, and are excellent in dried arrangements, hand-tied brooms, and other crafts. ***01151***

POPCORN/ORNAMENTAL

EARLY PINK

90 Days. This early popcorn is a great choice for regions with short growing seasons. The 5-7' plants each set 1-2 ears that are 5-7" long with an appealing mauve-pink hue. A unique color to expand fall ornamental offerings, as well as a great variety for popping. ***13118***

FIRECRACKER

95 Days. Produces high yields of 5" multicolored ears, and is great as an ornamental and for popping. Red stalks reach 7½' and can be harvested for fall sales. When popped, Firecracker produces a small white flake. ***12627***

CHERRY BERRY

98 Days. An improved version of the old Strawberry ornamental corn. The ears can grow up to 4" in length and have an intense crimson red kernel color. The main husk color is beige, but 25% or more of the husks will be colored burgundy, red, and red-streaked. The 5-6' plants are sturdy and produce good yields. May be used for popping corn when properly dried. ***11989***

STRAWBERRY DE-LITE

98 Days. This beautiful strawberry popcorn has longer ears than the standard, and a striking variety of colors including deep red, light pink, tan, and cream-colored kernels. The strong stalks stand well and offer outstanding yields of these attractive ears with beige husks that are occasionally streaked with red. ***12847***

GLASS GEM ORGANIC

100 Days. The name says it all; this variety is a gem! The iridescent, shiny, glass-like kernels will glisten in the fall sunshine. The multi-colored kernels can be popped or ground into flour. Sturdy plants grow 6-9' tall and produce an abundance of 7-8" long ears. ***12409***

MINIATURE BLUE

100 Days. Shiny, colonial-blue kernels cover the 2-4" ears of this unique variety. Plants grow to 7' tall and produce several uniform ears that are ideal for ornamental and craft use. A real must for those growing ornamentals. ***01146***

MINI COLORED

100 Days. A multi-colored mini popcorn that's perfect for fall décor and crafting. Plants set multiple 4-6" long ears per stalk in both mixed and solid colors. The ears have glossy kernels in a rainbow of colors, including calico, and a mixture of red and tan husks. ***14063***

RUBY RED F1

100 Days. Ruby Red flaunts glossy burgundy red kernels on ears that reach 5-7" and are perfect for fall displays. The 8-9' hybrid plants are strong against lodging and the kernels pop to a butterfly flake with excellent expansion. ***13122***

TOP POP POPCORN F1

100 Days. (R997) This butterfly-type popcorn produces large crops of attractive yellow ears on upright and adaptable plants. Its deep kernels pop to large "sunbursts" that are tender and delicious. ***01162***

GOURMET MUSHROOM POPCORN F1

103 Days. (R400MR) A superior mushroom-type variety with large kernels that pop into ball and mushroom shaped flakes, excellent for caramel and kettle corn. Plants are sturdy with dark green leaves. A great addition for fall and winter CSAs. ***12600***

SHAMAN'S BLUE F1

105 Days. Uniform hybrid plants have strong stalks that resist lodging and reach 8-9' tall. The large 8" ears have glossy dark blue kernels excellent for display and for popping. Kernels pop with great expansion to a tender butterfly flake. ***13123***

OXACANA GREEN DENT

UNDERWOOD'S ORNAMENTAL

FIESTA F1

BLOODY BUTCHER

RED STALKER

INDIAN FINGERS

WILDA'S PRIDE

ORNAMENTAL CORN

EARTH TONES DENT

90 Days. This is an exciting reselection from an heirloom dent flour corn. The 8-10" ears display beautiful muted earth tones of gold, bronze, mauve-pink, green, brown, and blue — great colors for fall sales. The attractive ears can be used for fall decoration, ground into flour, or used as feed for birds or other animals. ***01118***

OXACANA GREEN DENT

95 Days. This impressive dent corn has a large 8-10" ear and striking kernels in shades of green that will add a pop of interest to fall decorations. The emerald kernels can also be ground into flour or used as feed for animals. Plants average 9' tall. ***12968***

UNDERWOOD'S ORNAMENTAL

100 Days. This outstanding ornamental is a New England heirloom variety that has been hand selected by the Underwood family of Easthampton, MA for three generations. The short strong plants reduce lodging, and shank length is ideal for pulling back the husks, which are 35% red. Ears average 9-11" in length and have a wide range of color combinations, made up of shiny solid and striped kernels. ***00172***

FIESTA F1

102 Days. Earlier and on shorter stalks than the standard Indian Ornamental, this dazzler has over 50% purple husks. Ears ranging from 7-10" in length bear an attractive mixture of yellow, red, white, blue, purple and variegated kernels. Each one-of-a-kind ear glistens in this eye-catching variety from the University of N.H. ***01149***

BLOODY BUTCHER

105 Days. This heirloom ornamental has an eye-catching blood red kernel color with darker kernels intermixed. The large ears vary from 8-12" in length. Plants are 9-12' tall with 1-2 ears per plant. This outstanding dent variety makes an excellent ornamental, but is also commonly ground into flour or used in making whisky, bourbon, and moonshine! ***01157***

Striking purple-red stalks and husks

RED STALKER

105 Days. Cash in on the booming ornamentals market with the addition of this quality variety. The 7-9' tall stalks are a mixture of purple-red and green, perfect to dry for fall ornamental displays and sales. Plants produce 7-8" ears of shiny multi-colored kernels that can also be ground for flour. ***00145***

INDIAN FINGERS

110 Days. This delightful ornamental bears similar colors to Indian Ornamental, but its ears are much smaller, averaging only 3½" in length. It has small, shiny kernels in colors including mahogany, yellow, red, purple, and orange stripe on yellow. Hung in displays, these unique ears will catch the light and turn heads. ***00146***

The widest diversity of color in a single variety

WILDA'S PRIDE

110 Days. We discovered this amazing colorful ornamental growing in the field of one of our New England customers. Tall and sturdy plants produce 8-11" ears in yellow and white, deep maroon red, solid yellow, black-red, and a wide assortment of multi-color combinations. This one is a must for ornamentals displays. ***01177***

CUCUMBERS

Culture: Cucumber plants are quite tender, and early spring plantings should be protected from frost and wind. Use Hot Kaps, row covers, or plastic tunnels to protect young plants and to provide higher growing temperatures. All plantings benefit from plastic mulch and supplemental water. Plant performance and yield vary by flowering type. Monecious plants produce both male and female flowers and require insect pollination to set fruit. Gynoecious plants produce predominantly female flowers and have higher yields, but require interplanting with a monoecious variety to achieve adequate pollination. Most gynoecious varieties are packaged with 12-15% pollinizer variety mixed in. Enhance yields of monecious and gynoecious varieties by adding bee hives. Parthenocarpic plants produce seedless fruit that do not require pollination, making them suited to protected culture. If pollinated, parthenocarpic varieties may have misshapen fruit. **Days to maturity** are from direct seeding and for variety comparison only. **Avg. seeds/lb. = 16,000.**

STANDARD SLICERS

BRICKYARD F1

50 Days. Gynoecious. With an exceptional disease resistance package and vigorous vines, Brickyard embodies the next generation of Downy Mildew and multi-virus resistance. Early maturing with a high yield potential for 8.25" Fancy grade fruit. Industry leading disease package includes high resistance to Scab, WMV and ZYMV as well as intermediate resistance to CMV, PRSV, ALS, Anthracnose, DM, and PM. Pollinizer included. ***12860***

BRICKYARD F1

RAIDER F1

A dependable early slicer

52 Days. Gynoecious. One of the earliest-maturing slicers, this hybrid is a high yielder of uniformly dark green non-stippled cylindrical fruit. Definitely a cucumber to start the season with in the Northern U.S. The favorite of Northern growers for uniform early harvests of quality fresh market slicers. High resistance to Scab and intermediate resistance to ALS and CMV. Pollinizer included. ***00441***

RAIDER F1

STONEWALL F1

High packout potential

53 Days. Gynoecious. Stonewall has received high marks for fruit quality, shape, size and No. 1 fruit. It has the earliness that many markets demand and a disease package that includes high resistance to Scab and intermediate resistance to ALS, PM, CMV, DM and Anthracnose. The classy 8" fruit are dark green and very straight. U.S. Patent 6,765,130. Pollinizer included. ***00439***

STONEWALL F1

BRISTOL F1

54 Days. Gynoecious. Strong plants with intermediate resistance to Downy Mildew produce high quality smooth fruit. Bristol has a very strong yield potential of classy dark green fruit measuring 8" long by 2" in diameter. It carries high resistance to Scab, Anthracnose, CMV, ALS and ZYMV, and intermediate resistance to DM, PRSV, and PM. Pollinizer included. ***12182***

BRISTOL F1

INTIMIDATOR F1

54 Days. Gynoecious. This early maturing hybrid slicer produces fruit that have a dark green color, uniform shape, and an even taper on both ends. Its rugged plant handles multiple harvests well and carries an excellent disease package. The fruit average 7½-8" in length and have an attractive and smooth appearance. Intimidator offers a high yield potential of premium-quality fruit. Pollinizer included. ***11414***

INTIMIDATOR F1

SAMURAI 252 F1

54 Days. Gynoecious. Strong plants carry industry leading resistance to multiple races of Downy Mildew. Samurai 252 produces exceptional yields of straight, dark green Fancy grade fruit that can reach up to 9" long. Early to mature, plants have a beautiful crown set of fruit with a tight seed cavity. High resistance to Scab, ZYMV and intermediate resistance to PM, DM, Anthracnose, ALS, CMV, and WMV. Pollinizer included. ***13900***

BABY/SNACKING CUCUMBERS

MINI-ME F1 ORGANIC

45 Days. Parthenocarpic. This mini Beit-Alpha variety is perfect for snacking at 3-3½ inches long. Plants are extremely productive, setting 2-5 uniform fruit per node, and perform especially well in protected culture. Pick small for crisp shiny fruit with excellent appearance and flavor. ***12957***

MANNY F1 ORGANIC

50 Days. Parthenocarpic. This Beit-Alpha type offers tender 8-9" dark green fruit with smooth thin skin. Crisp crunchy cucumbers are mild and nearly seed-free. Pollination is not an issue for this variety! It can be grown in open field or protected culture with trellising. Intermediate resistance to CVYV and PM**.** ***11020***

SNACK F1

50 Days. Parthenocarpic. Vigorous vines set early yields of dark green mini cucumbers best harvested at a length of 4-6". The uniform fruit are smooth, sweet, and non-bitter. High resistance to Anthracnose, CMV, and Scab, and intermediate resistance to DM and PM**.** ***13418***

LONG EUROPEAN SLICERS

SWEET SUCCESS F1

54 Days. Parthenocarpic. This AAS Winner grows well in both open field and greenhouse production, as it sets fruit without bee pollination. Fruit will be 12" long, seedless when unpollinated, and straight when trellised. The dark green, smooth fruit can reach 2¼" in diameter. ***00448***

BURPLESS 26 F1

60 Days. Monoecious. Trellised, this monoecious Japanese Slicing cucumber will grow straight and 12" long, but quality is best if picked at 8-10". The smooth dark green fruit are very thin-skinned and tasty with no bitterness, giving it far superior eating quality over common slicers. ***00402***

TASTY GREEN F1 ORGANIC

60 Days. Monoecious. This early, burpless cucumber has white spines with dark green tender skin. The 8-10" fruits average 1½" in width. Interior is white fleshed with a crisp mild sweet flavor. Suitable for open field and protected culture. Plants offer high resistance to PM and intermediate resistance to DM. ***12373***

TAURUS F1

60 Days. Parthenocarpic. This gourmet Japanese cucumber was developed for greenhouse production. The fruit have a glossy deep green color and measure 8½-9"L x 1¼-1½"W. Taurus has very tender mild skin and its crisp flesh has delicious flavor. Intermediate resistance to PM. ***11403***

MOUSE MELON

MOUSE MELON (MELOTHRIA SCABRA)

65 Days. Mouse melon, Cucamelon, Mexican Sour Gherkin - many names, one cute fruit! This Mexico-native is a trendy addition for Farmers Markets and sales to the restaurant trade. Plants produce an abundance of small, oblong green- striped fruit that can be used in pickles, stir-fries, salads, cocktails, and as a delicious snack. Trellis for best plant performance and easier harvest. ***22957***

SPECIALTY SLICERS

DIVA F1

58 Days. Parthenocarpic. Diva has crisp flesh that is both non-bitter and delicious. The slender slightly tapered fruit have very tender skin that is smooth glossy and bright green. Diva is well adapted to any location where cucumbers are normally grown. ***00444***

PATIO SNACKER F1

55 Days. Parthenocarpic. Bedding plant growers can appeal to customers looking for patio vegetables with one Patio Snacker in a 3-5 gallon container with a short trellis. Compact 3-5' branching vines can be grown in ground or in containers and produce good yields of flavorful, dark green fruit. The crunchy fruit measure 1½" in diameter x 6-8" in length. ***11095***

SILVER SLICER ORGANIC

54 Days. Monoecious**.** Bred by Cornell University and brought to market through the cooperative efforts of Solveig Hanson and Tom Stearns. Thin-skinned fruit are 7-8"L x 1½-2"W with a blocky shape and tapered ends. Mild flavor with a hint of sweetness. Pick both the gherkin and slicer stages for excellent fresh eating or pickling. High resistance to PM. ***11421***

A gourmet Burpless cucumber

SWEET SLICE F1

63 Days. Monoecious. Sweet Slice's superior eating quality gives it gourmet status. While in the Burpless class, this sweet non-bitter variety looks like a common slicer. This hybrid produces good yields of dark green fruit on vigorous vines. ***00438***

ARMENIAN PALE GREEN

65 Days. Monecious. This cucumber is genetically a melon! A burpless variety, fruit is pale green with thin, crisp skin and heavy ribbing. Best harvested between 12-18" this variety will produce beautiful, straight fruit when grown on a trellis. Plants are extremely productive. Commonly known as a Snake Cucumber or Yard Long Cucumber, this unique heirloom variety is sweet and non-bitter. ***13931***

SWEET SLICE F1

ARMENIAN PALE GREEN

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture · Downy Mildew Protected

PICKLING CUCUMBERS

ARTEMIS F1

50 Days. Parthenocarpic. A high-yielding, white-spined Gherkin pickle with excellent quality and sweet flavor. Artemis fruits are seedless and non-bitter with uniform appearance and consistent internal quality. Best picked at 3" length, the dark green pickles are set continuously on compact vigorous vines with strong recovery and disease package. Suitable for open field and protected culture environments. High resistance to CMV, Scab, and ZYMV, and intermediate resistance to PM and DM. ***13250***

DOUBLE YIELD ORGANIC

50 Days. Monoecious. Grow a part of history! Bred and introduced by Joseph Harris in the 1924 Harris Seed catalog, it was one of the finest pickling varieties, and still stands true today. It produces high yields of 6" green fruit with traditional black spines- just right for sweet gherkings, dill pickles, and fresh eating. ***12374***

ESPIRIT F1

50 Days. Monoecious. Strong productive plants have a concentrated set of blocky dark green fruit good for both the fresh and processing markets. Espirit falls in the Eureka class and offers earlier maturity and a strong disease package including high resistance to Scab and intermediate resistance to CMV, WMV, ZYMV, ALS, TLS, Anthracnose, and PM. ***13134***

CROSS COUNTRY F1

51 Days. Gynoecious. Cross Country has a widely adapted vigorous vine that performs well under stress. Fruit are dark green and blocky to slightly tapered in shape with good brine quality. Its strong disease package and adaptability make Cross Country an excellent choice for pickling cucumber growers in a wide range of conditions. Pollinizer included. ***12606***

CITADEL F1

52 Days. Gynoecious. Citadel has an industry-leading disease package which includes intermediate resistance to Downy Mildew. With 52 day maturity, dark green fruits are borne in a concentrated set on strong medium-sized vines. Citadel fills a need in the industry for DM resistance, making it a great choice for fresh market and processing producers. Pollinizer included. ***12626***

PROVISION F1 ORGANIC

52 Days. Gynoecious. Dark green cylindrical fruit are sweet and flavorful with a nice texture suited to both fresh eating and preserving as pickle spears or slices. Manageable plants are well adapted to most climates and offer a strong disease package. High resistance to ALS and Scab and intermediate resistance to Anthracnose, CMV, DM, PM, and WMV. ***13406***

REGAL F1

52 Days. Gynoecious. An early high-yielding gynoecious hybrid pickle, Regal's slightly longer and slimmer shape is great for chips, spears, and whole packing. The dark green stippled fruit are slightly tapered and can be either hand or machine harvested. Very popular with Harris customers for many years and widely used by processors. Pollinizer included. ***00446***

GHERKING F1

53 Days. Parthenocarpic. Strong vigorous vines that spread 4-6' produce good yields of dark green pickles with white spines. The cylindrical fruit are bitter-free and perfect for pickling or eating fresh. Gherking is self-pollinating, making it ideal for greenhouse and high tunnel production. High resistance to Scab and CMV, and intermediate resistance to PM and DM. ***12329***

EUREKA F1

57 Days. Monoecious. Developed for hand harvesting and the trellising trade, Eureka is a hybrid pickle with a good disease package. Strong vigorous plants set good yields of uniform firm white-spined dark green fruit. Intermediate resistance to ALS, CMV, PM, Anthracnose, Scab, ZYMV, PRSV, and WMV. ***00412***

SASSY F1

57 Days. Gynoecious. Sassy offers growers a gynoecious hybrid pickle with very dark green color and slightly longer fruit. Strong vines with a good disease package produce high concentrated yields of slightly tapered fruit that have eye-appealing dark green exteriors and excellent interiors. Sassy performs well in the North or South and can be either machine or hand harvested. High resistance to Scab and intermediate resistance to ALS, Anthracnose, CMV, and PM. Pollinizer included. ***00437***

EL CAMINO F1

60 Days. Monoecious. High-quality dark green fruit are set continuously on healthy vigorous vines that perform in open field or protected culture. The uniform fruit are smooth with even color and nice flavor, excellent for canning. Good holding ability post-harvest. Intermediate resistance to CMV, PRSV, WMV, and ZYMV. ***13250***

EGGPLANT

PATIO BABY F1

45 Days. This high yielding AAS Winner produces mini eggplants very early and continues throughout the season. Oval shaped fruit are deep purple with a purple calyx. Fruit are set in clusters on compact plants that can be grown in-ground or in containers! ***22895***

VIOLET DELITE F1

50 Days. Upright semi-spineless plants make it easy to harvest the slender, elongated fruit of Violet Delite. Fruit have glossy bright purple skin, green calyx, and tender white, non-bitter flesh that is great for grilling and frying. Harvest at 5-7" long for baby size or 9-12" long for full fruit size. Plants perform well in-ground or in container plantings. ***13133***

FAIRY TALE F1

50 Days. This All-America Selections winner has a compact plant perfect for containers or small-space gardens. The productive semi-spineless plants set clusters of small white fruit with violet stripes. Harvest the tender non-bitter fruit at 1-2" long for baby size or 2-6" for full size. ***00470***

GRETEL F1

55 Days. Gretel produces an abundance of glossy elongated pure-white fruit in clusters. Its slender fruit has few seeds, tender skin, and sweet flavor when they are harvested at a 3-4" length. The fruit have a green calyx and are produced on plants that reach 3' high and can be grown in-ground or in containers. ***11467***

HANSEL F1

55 Days. Hansel's slim elongated miniature fruit are tender, smooth, and non-bitter. Harvest can begin when fruit are 2-3" long and can continue without loss of fruit quality until fruit reach a length of 4-5". The 18" plants yield good quantities of these glossy dark-purple fruit that can be paired with Gretel for an attractive market display. Plants can be grown in-ground or in containers. ***11471***

LITTLE FINGERS ORGANIC

60 Days. Heavy yields of nearly straight fruits are 4-5"L x 1-2"W, set in clusters of 3-6. The creamy white interior offers a smooth taste and few seeds. Tender, thin skins do not require peeling or salting before cooking; grill whole. Grow in containers or open field. ***00460***

TURKISH DELITE F1 ORGANIC

60 Days. Spineless plants offer continuous set of slender, straight, cylindrical fruit that are glossy and dark purple-black with a green calyx. Turkish Delite's parthenocarpic flowering type allows it to be grown in open field or in protected culture. The fruit have excellent internal quality and average 8-10 ounces and 8-11" long at full size. ***13408***

SNOWY ORGANIC

65 Days. This ivory-white Italian type eggplant reaches 7" long and has excellent flavor and firm fruit. The plants are vigorous and continue to produce throughout the season. Performs well in-ground and in container plantings. ***11466***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

ANNINA F1 ORGANIC

67 Days. A beautiful hybrid graffiti type, like Listada de Gandia. Vigorous plants produce exceptional yields of uniform shaped fruits on spineless plants! Fruit shape is large at 6-8" in length and 2½-3" at its widest point. Ideal for both open field and high tunnel production. ***12744***

PICASSO F1

75 Days. Picasso offers traditional teardrop shape paired with spineless calyces, exceptional yields, and high-quality flesh. The dark purple fruit hold their color and quality, are well covered by strong plants, and are easy to harvest. With its superior uniformity, yield, quality and spinelessness, Picasso is a top pick in our trials. ***12846***

SHIKOU F1

75 Days. Shikou is a long Asian type eggplant with dark glossy fruit that measure 6-8" long by 1½" wide, have a purple calyx, very few seeds, thin tender skin, and a very white interior. Medium-sized plants are productive and semi-spineless. ***12183***

CLASSIC F1

76 Days. Elongated oval green-calyxed fruit are the size and shape well known in most markets. The glossy deep purple-black color of Classic is preferred by customers, and its erect vigorous plant supports heavy yields of high quality fruit. Classic is the absolute standard for premium eggplant. Not adapted to cool winter growing areas of the South. ***00465***

GAUDI F1

80 Days. Long oval purple-black fruit are firm and set on strong upright plants. The bright green calyx is spineless for easy harvest, and the dark black color has impressive holding ability through and after harvest. Gaudi performs for open field and protected culture growing. ***13151***

LISTADA DE GANDIA ORGANIC

80 Days. Striking elliptical egg-shaped fruits are 5-6" long with white and purple stripes. Your customers will love its excellent flavor, tender texture, and a very thin skin that doesn't require peeling. Performs well in all parts of the U.S. ***12376***

Elephant
Hardneck Chesnok Red
Hardneck German Red
Hardneck German White
Hardneck Music
Hardneck Persian Star
Hardneck Purple
Hardneck Svea
Hardneck Ukrainian Red
Softneck (European White)

Can't decide which garlic to try?
Collections are also available so you can sample different types.

ELEPHANT GARLIC

SOFTNECK

Softneck garlic is the most common type of garlic, and is typically the type found in grocery stores. This type is easy to grow and has longer storage life compared to hardneck varieties. Softneck bulbs produce a high number of cloves per bulb, often with smaller interior cloves. Frequently called braiding garlic, softneck garlic has pliable stems that are easy to form into braids for storage. Softneck types tend to be more adaptable to Southern regions than hardnecks.

HARDNECK

Hardneck garlic is considered to be very versatile and is characterized by strong, rich flavor. Hardneck varieties typically produce fewer, but larger cloves. Although they do not store quite as long as softneck, hardneck varieties have the added benefit of the scape. Harvesting the scape is recommended once the top has begun to coil, as it typi- cally results in better bulb growth. Hardneck garlic is very cold hardy and performs best in Northern climates, although some types are adaptable to Southern areas as well. Harris Seeds offers several dif- ferent types of hardneck garlic including porcelain, rocambole, purple stripe, creole, and asiatic.

ELEPHANT

Elephant garlic is not a true garlic, but actually a variant of the garden leek. Elephant garlic bulbs are very large and can be up to 5-6" across and weigh over 1 lb. The large sized cloves make it easy to work with in culinary uses. Elephant garlic has a sweet and mild flavor that can be enjoyed raw or cooked. Elephant garlic is widely adaptable to both Northern and Southern climates.

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture · Downy Mildew Protected

GOURDS

Fall sales at roadside markets and farmers' markets have increased dramatically the last few years. Gourds are a staple in the fall marketplace, as customers gravitate to their intriguing array of colors, sizes, and shapes. Larger fruited varieties mature late, so plant early to assure that they mature in time for the sales season.

Avg. seeds/lb.:
Large Fruited = approx. 3,000 seeds.
Small Fruited = approx. 7,000-11,000 seeds.

HOARGARTH

90 Days. Intermediate bush plants produce distinctive warty fruit that add texture and deep color to fall displays. The hard-warted fruit are 7"W x 5"T, narrow stemmed, and mature from dark green and orange combinations to solid orange at full maturity. ***12782***

DAISY GOURD®

95 Days. This attractive gourd mix was developed by Larry Eckler of Niles, MI. Daisy Gourd® produces high yields of mixed gourds in shades of green, orange, yellow, and white. Most produce a unique daisy pattern on the stem-end of the fruit. Mr. Eckler recommends planting 3500-4000 seeds per acre, spaced at 1½-2' in the row and 6' between rows. Daisy yields best when it is not overpopulated. ***11819***

BIG SIS DAISY GOURD MIX

95 Days. To complement Daisy Gourd®, Eckler Farms has developed a larger daisy-flowered gourd measuring 5 inches in diameter and 1½ lbs. Striped multi-colored gourds in shades of green, orange, yellow, and white are perfect for fall displays. With its larger size and distinct shape, Big Sis is a nice addition to mixed bins. ***14065***

GALAXY OF STARS F1

95 Days. An exciting and attractive hybrid gourd mixture, Galaxy of Stars is sure to bring interest to your fall market displays. The mix produces unique star-shaped fruit in varying striped patterns and colors of yellow, cream, orange, green, and white. The mature fruit holds up to mechanical washing and waxing. ***11815***

GIZMO

95 Days. A hard-shelled winged gourd mix that offers beautiful multicolored fruit with dark green, orange, yellow, light green, and white variations. Fruit are 3-5" tall x 6-8" wide at the wing tips, and are produced on bush type plants. A top-pick from our trials. ***12781***

SHENOT CROWN OF THORNS

95 Days. An interesting, small gourd about 4-5" in diameter. It's roughly round with ribs and curved "fingers" pointing to the blossom end. Plants produce a variety of striped and bicolor fruit with white, yellow, light and dark green colors. ***00806***

SMALL FORMULA BLEND

95 Days. This is a colorful blend of fancy small gourds with a few plain types mixed in. Popular types like Spoon, Pear Bicolor, and Shenot Crown of Thorns are included, along with many different and colorful warted ones. ***11426***

GOURDOSAURUS REX F1

AUTUMN WINGS LARGE

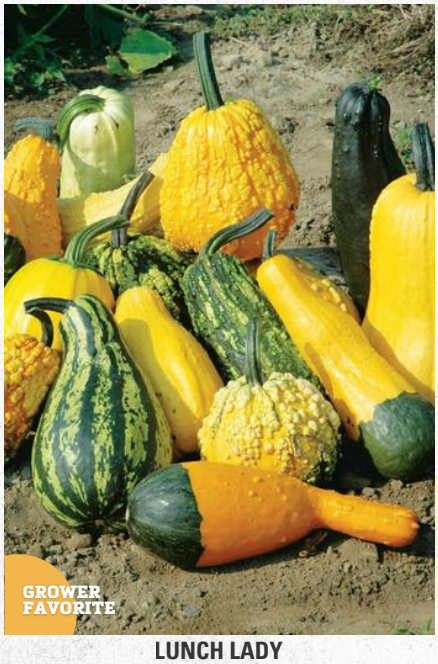

GOURDZILLA F1

FANCY WARTED MIX

GOURDKING F1

LUNCH LADY

AUTUMN WINGS BLEND

100 Days. This formulated mix of warted and non-warted winged gourds includes approximately 50% medium, 25% small, and 25% large sized gourds. All fruit have bulbs approximately 2½" in diameter, while neck length is 4-5" for small gourds, 6" for medium gourds, and 12" for large gourds. **Planting note:** Plant this mix early so the fruit can fully mature before harvest. Wings of immature gourds are easily damaged and can rot. ***11822***

AUTUMN WINGS LARGE

100 Days. A unique swan-shaped gourd of many colors with wings and warts. Bulbs are 2½-3" in diameter with a neck up to 12" long. A beautiful addition to autumn displays. ***12619***

FANCY WARTED MIX

100 Days. Fancy Warted Mix is an improved selection of warted fruits in various combinations of yellow, orange, ivory, and green shades. This eye-catching mix will produce warted fruit with color patterns that are solid, striped, or bicolor, and fruit shapes like pear, spoon, and round. ***11976***

GOURDKING F1 PMP

100 Days. This hybrid gourd produces an assortment of 5-15 lb fruit in various shapes, sizes, and colors. Vines are resistant to PM and fruit are hard shelled, with excellent shelf life. The large size and range of bright colors are sure to catch attention. ***12987***

GOURDOSAURUS REX F1 PMP

100 Days. This eye-catching hybrid blend produces large, hard-shelled gourds that range in color and are sure to be a hit in any ornamental display! The long-neck gourds weigh 10-13 lbs. with sizes ranging from 8-24" long and 4-10" wide. A blend of three hybrids, Gourdosaurus Rex sets various winged and warted shapes in solid black and orange, black flecked, and multi-colored combinations of black, orange, white, yellow, and green striping. Intermediate resistance to PM. ***13924***

GOURDZILLA F1 PMP

100 Days. With an extra long neck and sharp green and orange color contrast, Gourdzilla is the perfect complement to fall displays. The hard-shelled fruit have great shelf life, and the vines offer PM resistance. ***12988***

LUNCH LADY

100 Days. Large vigorous vines produce unique large warted gourds that weigh from 5-20 lbs. each. It produces an array of fruit sizes, shapes, and colors, all with hard shells and warts. ***11818***

TURK'S TURBAN
100 Days. This excellent strain offers rich deep colors and outstanding uniformity of size. The flattened 8-10" diameter fruit are brilliant orange-red with prominent "turbans" that display stripes and spots of scarlet, orange, cream, white, and green. The large vines yield very heavily. ***00822***

MINI RED TURBAN
105 Days. Mini Red Turban has a bright orange-red base and a creamy-white colored top. The fruit average 3-6" in diameter and weigh from ½-1 lb. Vigorous plants produce good yields of this striking ornamental. ***11816***

BIG APPLE
110 Days. These apple shaped gourds have a mottled green color and measure 6-8" in diameter. A variety of sizes are produced and the shape can vary from round to an upright apple shape. ***00803***

BIG BOY MIX
115-125 Days. We have formulated our own special mixture of large fruited gourds to ensure that you get the best selection possible. This mix contains equal proportions of Swan, Caveman's Club, Bushel, Dipper, Birdhouse, Apple and Snake gourds. ***01801***

BIRDHOUSE
125 Days. Large pear-shaped fruit have smooth skin and can be dried and used as birdhouses for Purple Martins, Bluebirds, or Wrens. Harvest green and dry with good air circulation for several months. Fruit measure 10" tall and 5-10" in diameter. ***01309***

CAVEMAN'S CLUB
125 Days. Each Caveman's Club gourd has a narrow handle that ends in an oblong deeply veined and ridged club. This primitive-looking gourd matures late and should be planted early for best results. Trellising the vines helps to ensure straight necks. Fruit measure 12-18" long and 5-8" in diameter. ***01800***

SPECKLED SWAN
125 Days. The long necks of Speckled Swan curve gracefully and enlarge at the end to resemble a swan's head. The bulbed base measures 6-12" in diameter and has a flat bottom for ease of display. ***00805***

ARUGULA - ASTRO

ARUGULA - DRAGON'S FIRE

ARUGULA - ROQUETTE

ARUGULA - UBER ORGANIC

BEET - BULL'S BLOOD

BEET - FRESH PAK F1

GREENS

ARUGULA

ASTRO

38 Days. Salad. Growers prefer Astro for its more lobed or cut leaf type and its high yields of whole leaf arugula. Slow bolting vigorous plants may be cut at the baby or mature stage. Distinctly nutty flavor and attractive medium green color. ***01935***

DRAGON'S FIRE

40 Days. Wild. This unique wild arugula has a deeply lobed bright green leaf with contrasting red vein. Plants are vigorous with good uniformity, and the leaves hold great flavor. A vivid and spicy addition to salads and sandwiches. ***13141***

ROQUETTE (ROCKET SALAD)

35 Days. Salad. Mustard-like greens for spring and fall. Pick young bunches to combine with less pungent greens in salads. Strong peppery flavor. ***00935***

UBER ORGANIC

40 Days. Salad. Dark green arugula with a uniform refined serrated leaf and strong rocket flavor. With an upright habit, thick leaf, and stable quality, Uber is well suited to mechanical harvest. Harvest at 21 days for baby leaf or 40 days for full size. ***13258***

BEET GREENS

BULL'S BLOOD

Deep red tops for salad mixes

60 Days. Deep cabernet leaves even at the seedling stage make Bull's Blood a striking easy-to-grow addition to spring and fall salad mixes. ***00208***

FRESH PAK F1

35 Days. This baby leaf beet green really stands out with its dark green oval leaf, deep red petiole, and excellent veination. Plants are erect with a high resistance to bolting. U.S. Patent 9,198, 364. ***12621***

BIOFUMIGANT MUSTARD

CALIENTE ROJO/NEMAT BLEND

This blend combines our unique arugula variety and the strongest biofumigant mustard variety currently available. Nemat Arugula provides green manure biomass for improved soil tilth and weed suppression, and the growing roots act as a trap-crop attracting nematodes and wireworms. Caliente Rojo is a distinctive mustard with purplish/red leaves and the highest glucosinolate concentration currently available. The combination of the attractive/trapping ability of the arugula with the extremely effective biofumigant mustard creates a very useful tool for your IPM program. Seeding rate of 6-9 lbs./Acre.

13546 Raw seed: 50 lb. $447.00.

CALIENTE ROJO/NEMAT BLEND

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

CHICORY

ENDIVE BENEFINE ORGANIC

48 Days. This heat-tolerant frisee endive is suitable for growing in spring, summer, and fall plantings. Its compact, upright, tightly-filled heads are strong against bolting and tipburn and have attractive, shiny, dark green exterior and well-blanched interior leaves. With high yields of nicely frilled leaves and proven adaptability, Benefine is an excellent choice for any region. ***12950***

ESCAROLE ELIANCE ORGANIC

50 Days. With an upright habit for ease of harvest, heat tolerance, and strong resistance to bolting, Eliance is an exceptional escarole type. Dark green smooth leaves fill out tight heads that harvest cleanly. Suitable for open field and greenhouse production. Try covering with blanching caps the week before harvest for the best internal color and sweetness! ***12951***

RADICCHIO FIERO F1 ORGANIC

66 Days. A great fresh market vegetable, Fiero is an upright, elongated variety that is suitable for all growing seasons. It has excellent eye appeal with its vibrant, deeply ribbed purple and white veined leaves and is sure to bring in customers. Early maturity, Treviso type. ***12546***

RADICCHIO LEONARDO F1 ORGANIC

81 Days. Later maturing than other varieties but extremely vigorous. Good for fall production and resistant to bolting. The round, dark red heads will become more vibrant and flavorful when maturing in cooler temperatures. An alternative to red cabbage, radicchio offers an unforgettable tender, crisp leaf for a perfect addition to any salad or slaw. ***12547***

SIMPLYSALAD® SERIES

These unique multi-seeded pellets each contain 7-12 seeds of a mixture of varieties for easy production of baby leaf greens. Sow 5-6 pellets in a 12" container for finished plant sales to consumers, or grow for baby leaf harvests of mixed greens. After sowing, grow at cooler temperatures without bottom heat. When plants reach 6" tall, harvest at 1" from the soil line. Plants will re-grow in about three weeks and can be harvested two to three times. The varieties within the SimplySalad mixes have been specifically chosen to germinate around the same time to ensure even maturity and a balanced mix at harvest time. They perform well in-ground, in containers, or hydroponic production.

ALFRESCO MIX

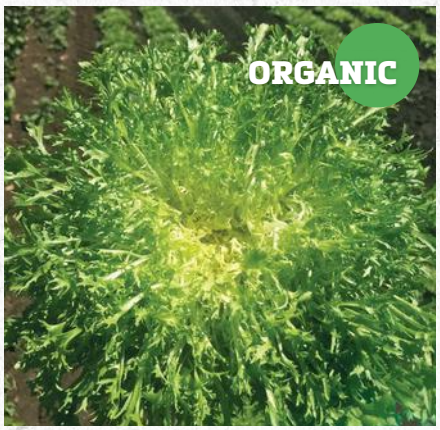

35 Days. This mix has a true Mediterranean flavor and feel. Each pellet includes 10-12 seeds of red and green leaf lettuce, arugula, endive, and radicchio. Visually a stunning mix, with shades of green, red, and bronze. ***11507***

CITY GARDEN MIX

35 Days. A traditional mix of lettuce varieties that are beautiful and easy to grow. Each pellet includes 7-9 seeds of red and green leaf lettuce in shades of green and bronze with different leaf textures. ***11501***

GLOBAL GOURMET MIX

35 Days. A mix of Asian flavors perfect for use in salads. Each pellet includes 10-12 seeds of red and green leaf lettuce and spicy Asian greens for different leaf textures in shades of greens and bronze. ***11500***

COLLARDS - FLASH F1

KALE - DARKIBOR F1 ORGANIC

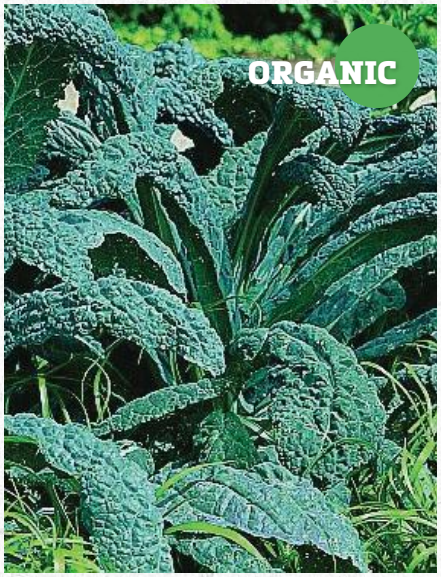

COLLARDS - TOP BUNCH 2.0 F1

KALE - DAZZLING BLUE ORGANIC

KALE - BLACK MAGIC

KALE - LACINATO ORGANIC

COLLARDS

FLASH F1

75 Days. This hybrid collard is slow to bolt, has good uniformity, and fast re-growth allowing for heavy repeat harvests. The dark green leaves are smooth, broad, and well suited to stripping, bunching, and processing. ***00390***

TOP BUNCH 2.0 F1

70 Days. This early maturing hybrid has wavy, lightly savoyed blue- green leaves that re-grow quickly after harvest. Upright plants are slow to bolt and are a top choice for fresh market bunching and for processing. ***12780***

KALE

BLACK MAGIC

60 Days. Tuscan/Lacinato. Deep green, almost black color and exceptionally sweet rich flavor set this outstanding Lacinato type apart from others. The gorgeous narrow strappy leaves are deeply puckered and the upright plants are easy to harvest, offering improved bolt tolerance, uniformity, and winter hardiness. Black Magic's dark color is striking when displayed in mature bunches or when added to baby leaf blends. ***11430***

DARKIBOR F1 ORGANIC

60 Days. Green Curl. This high yielding curly kale stands 18-24" tall. Richly textured dark green leaves can be stripped for bunching, or cut the whole plant. It is extremely cold tolerant and does well in Southern overwintering production. ***12473***

DAZZLING BLUE ORGANIC

60 Days. Tuscan/Lacinato. This striking blue kale offers vivid color in both the leaves and pink mid-rib veins. More winter hardy than regular lacinato, this variety will extend your season well into winter and supplement CSAs and markets. ***12725***

LACINATO ORGANIC

60 Days. Tuscan/Lacinato. These 10"L x 3"W wrinkled dark blue- green leaves really stand out when bunched. Tender leaves are great for cutting at the baby leaf stage, or grow on to full maturity for salads, smoothies, and soups. Extremely cold tolerant, a frost will sweeten the taste. Lacinato is also an outstanding variety to plant as an ornamental for large garden bed or landscape displays. ***00052***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

RAINBOW CANDY CRUSH F1
55 Days. Pink Curl. A vibrant pink kale with bright green edges and an upright growth habit. Rainbow Candy Crush has a mildly sweet flavor and thick tender leaves, excellent for kale chips. Color varies with temperature from pink to magenta to purple, beautiful for ornamental use. ***13152***

RED RUSSIAN
50 Days. Russian. Well-known and sought after by home cooks and chefs, Red Russian is a staple of many market stand, CSA, and wholesale offerings. Its broad flat green leaves are defined by rosy red veins and have gently serrated edges. Cut Red Russian at baby size for mesclun mix, or harvest mature for bunches. Pairs well with White Russian. ***00488***

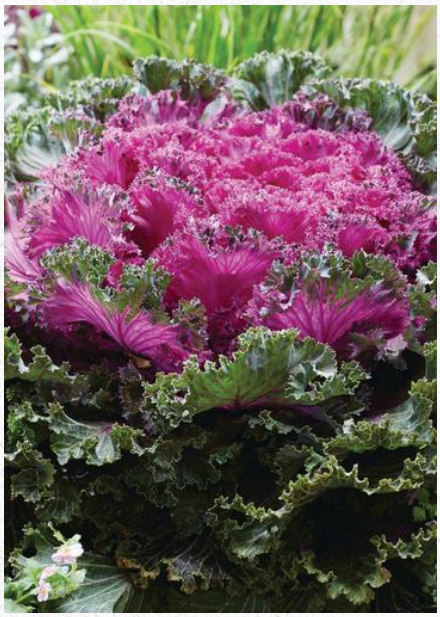

REDBOR F1
55 Days. Red Curl. This curly kale has exquisite red and purple color, perfect for bagged sales and mixes. It also makes an excellent edible ornamental garnish for the restaurant trade. Plants grow up to 24" tall and have an upright uniform habit. Continuously cut for yields all season. ***01501***

RUBYBOR F1
55 Days. Red Curl. This deep purple dual-purpose kale is an excellent edible variety and a beautiful ornamental for landscape plantings, earning it a double Gold Medal award in the 2026 AAS trials. Rubybor has a compact, tidy plant that out-yields other red kales, with frilled leaves that are tender and non-bitter. Plants perform late into the season, tolerating both frost and Southern heat. ***14066***

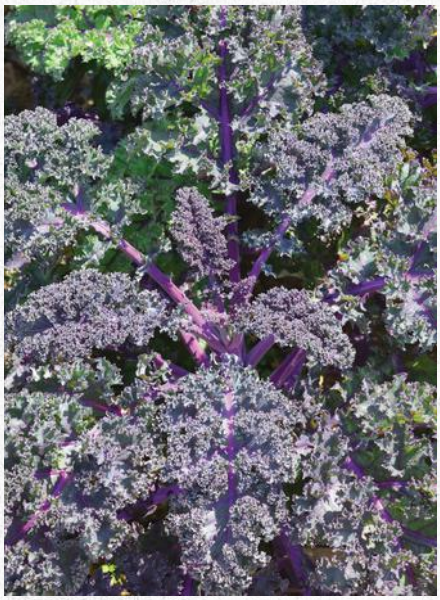

SCARLET
55 Days. Red Curl. A striking red/magenta kale that matures in 30 days for baby leaf or 55 days for mature leaf harvest. The broad leaves grow on 2-3' tall upright stalks and have quick recovery after stripping. Great for bunching and can also be used as an ornamental bedding plant. ***12334***

VATES
55 Days. Green Curl. A very uniform selection for finely curled vigorous leaves with lush blue-green color. The 15" plant can be overwintered if protected from severe cold and wind. Freezing weather enhances sweetness. Vates is popular cooked or as a long-standing garnish. ***00487***

WHITE RUSSIAN
50 Days. Russian. This distinctive kale offers classic Red Russian leaf shape with refined white veins. Leaves are broad, dark green, and moderately serrated at the edges. White Russian's rich kale flavor sweetens after frost, and leaves are tender whether cut at baby stage or harvested for mature bunches. The vigorous upright habit is excellent for multiple harvests. Pair with Red Russian for appealing color contrast. ***11431***

GREENS MIXES

BRIGHT AND SPICY MIX

This colorful mix includes pak choi, tatsoi, mizuna, and mustard in a spectrum of colors; golden yellow, red, purple, light and dark green. The well-balanced formulated blend provides a full range of leaf types, textures, and flavors for an exceptional greens mix. ***13119***

FRILLY LEAF BLEND

A blend of mustards, arugula, and mizuna that offers excellent leaf quality in a range of colors and flavors. Leaves are moderately to very frilled in purple, light and dark green. The formulated blend ensures even growth and a balanced mix of leaf types. ***13120***

HARRIS MESCLUN MIX

This baby salad mix blend has been carefully formulated to offer a complementary collection of colors, textures, and flavors. Flavors range from mild to lightly spicy, and colors include deep green, bright green, and wine red for striking presentation. Mix includes: lettuces, mustards, mizuna, kale, and spinach. ***00595***

TASTY MUSTARD MIX

A formulated mix of five different mustard varieties including light and dark green, red, and purple leaves. Leaf shapes vary from broad serrated to deeply frilled types, giving this flavorful mix a beautiful contrast of colors and textures. ***13121***

MICRO GREENS & BABY GREENS

What are micro greens and why should you grow them?

Micro greens are seedlings that are harvested at an immature stage, after cotyledons have fully developed and the first set of true leaves are beginning to form. Often referred to as a super food, micro greens have high nutrient concentration and are rich in antioxidants.

Every day more and more organic growers and home gardeners are starting seeds to harvest as microgreens. This is because they are an easy and efficient way to consume more nutrients. It's the ultimate power pack of a snack and consumer interest is on the rise. For growers, they are considered one of the most valuable crops per pound to grow, with quick harvest times and little production space needed. Keep your propagation houses in production with continuous succession plantings.

What are baby greens and why should you grow them?

Baby greens are harvested at an immature stage when leaves are 2-3 inches tall. They look similar to their full size counterparts — just baby sized! Harvested at a small stage when the greens are still tender with great flavor, baby greens can be single cut, or some varieties can be grown to"cut and come again" for multiple harvests. Although not as nutrient dense as micro greens, baby greens are still more nutrient dense than their full size equivalents. With many popular culinary uses, baby greens are in demand from restaurants, grocery stores, and markets.

Lifecycle

The life cycle of micro greens starts with germination when the root radicle emerges. The cotyledon stage is reached when the first leaves open, followed by the true-leaf stage when the first true leaves appear.

The life cycle of a baby green begins the same as a micro green. Germination occurs when the the root radicle emerges. Allow baby greens to grow until several true leaves have developed. If harvested correctly, baby greens can regrow and be harvested multiple times.

Planting and harvesting

Choose trays that fit your growing operation. Standard 1020 trays with no drainage typically work well in an indoor setup. Add a soil, sterile potting mix, hemp, or felt substrate to your tray. Spread seeds onto moistened substrate. Avoid over-watering and promote aeration by misting the seeds until germination. Seeding rates vary based on variety and whether you are havesting for micro greens or baby greens. Avoid seeding too thickly, which can result in inadequate air flow and issues such as dampening off. Adequate lighting is needed and plant habit and appearance can be altered by using LED lights of varying spectra.

For micro greens, harvest when 90% of true leaves are present (between 6-15 days) and cut plants right above the substrate. Wash and dry greens if needed and store refrigerated.

For baby greens, reduce seeding rates and harvest around 20-40 days or when desired size is reached. Harvest by cutting greens to 1" from the top of your growing substrate. If you intend to harvest again, make sure to leave behind a few small leaves from the center of each plant. Wash and dry greens if needed and store refrigerated.

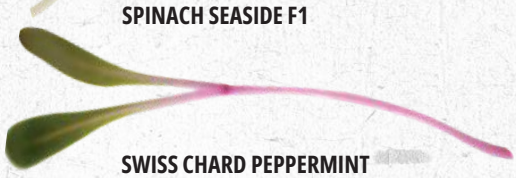

HARRIS MICRO GREEN MIX

HARRIS MICRO GREEN MIX

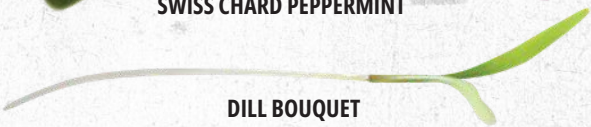

This formulated blend contains seven different items custom blended to give you an interesting combination of texture and color to harvest at the seedling stage for micro greens. The mix contains Swiss chard, beet, arugula, kale, and lettuce. Plant the seed in blocks and harvest at a 2-3" height. ***11522***

TERRAFIBRE™ HEMP GROW MATS

Using the fibrous byproduct of theindustrial hempplant, Terrafibre grow mats are ideal for micro greens, sprouts, wheat grass, and other short rotation crops. Industrial hemp fibers are separated, cleaned, and needle punched to produce a 100% biodegradable, soil-less growing medium. Hemp fibers have high water retention, keeping seeds wet through germination. Just sprinkle seeds to the desired density, then mist. The 5" squares are great for live clamshell sales of micro greens and the 10"W x 120'L roll allows you to cut to size to fit your needs. Mats are 100% biodegradable and fully compostable.

MIZUNA, MUSTARD & TATSOI

MIZUNA RED STREAKED

45 Days. This green is ideal for harvest at a baby leaf stage when it has its best dark red color. It can be sold as a specialty Asian green or blended into a salad mix to add a mustardy flavor, texture, and red color. The leaves are deeply serrated and produce their best color during periods of cool growing temperatures. ***11591***

MUSTARD MIZ AMERICA F1

25 Days. This red mizuna-mustard hybrid has exceptionally uniform leaf color, shape, and size. Great for baby leaf and mature leaf harvests, the deep red color is maintained through maturity, on both sides of the leaf. Upright plants make it easy to harvest the mild peppery flavored leaves. ***12492***

MUSTARD RED GIANT

40 Days. Large savoyed leaves are deep purplish-red with white mid-ribs. Thick tender leaves have moderate mustard pungency. Color intensifies in cooler temperature. ***00257***

MUSTARD SCARLET FRILL

30 Days. A deep purple mustard with green stem, mild flavor, and deeply lobed leaves for a dramatic frilly look. Add to greens mixes for extra color, loft, and flavor. ***12093***

TATSOI

Thick spoon-shaped dark green leaves grow on light green stems in a compact rosette pattern, offering a mild taste and high vitamin content. Great for Asian cooking and as a weighty salad mix ingredient. ***00254***

PAK CHOI

BOPACK F1 ORGANIC

45 Days. Flexible for baby Pak Choi as well as full size heads, Bopak matures earlier than other varieties and offers a compact upright habit. The tender leaves and crisp sweet stalks are excellent for cooking or eating raw. A strong performer for all seasons, Bopak holds quality and flavor even in summer heat. ***13005***

JOI CHOI F1

45 Days. A hybrid Pak Choi with attractive spoon-shaped stalks, ivory white stems, and dark green leaves. Harvest at 25 days for baby greens and 45 days for full size. Joi Choi carries some cold tolerance. ***00260***

MEI QING CHOI F1

45 Days. Mei Qing Choi was the first green-petioled Pak Choi to be introduced. It has very vigorous early growth and forms a tight vase- like shape. This uniform hybrid has good heat and cold tolerance and is slow to bolt. Harvest at 25 days for baby greens and 45 days for full size. ***01262***

PURPLE BV950 F1

30 Days. This purple komatsuna is excellent for baby leaf production with smooth spoon-shaped leaves and deep purple color. ***12102***

RAICHU F1

40 Days. This beautiful green pak choi has smooth crisp leaves, a tight upright habit, and excellent uniformity. The deep green leaves have compact petioles and form shorter dense heads suited to wrapping. A strong summer season performer with bolting tolerance. ***12986***

SORREL

BLOOK-VEINED SORREL

55 Days. With its bright green leaves and contrasting blood-red stems and veins, Blood-Veined Sorrel is an eye-catching item to add to your salad and micro greens mixes. Sorrel has a sharp tangy lemony flavor and is best when harvested at a young stage before the leaves become tough. An excellent variety for open-field and high tunnel production. ***11479***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

HERBS

BASIL

Annual; 14-25M sds/oz.
Uses: Aromatic, Culinary, Medicinal, Ornamental

EVERLEAF EMERALD TOWERS

Genovese. Impressive columnar plants reach 2-3' tall and are highly branched with short internodes. Plants flower up to 12 weeks later than standard basil, yielding high harvest potential of dark glossy foliage with traditional Genovese flavor. Suited for plant sales and container, in-ground, and hydroponic growing. ***63585***

EVERLEAF GENOVESE

Genovese. Bred for season-long performance and continual harvests, Everleaf Genovese is a well-branched yet tidy plant that performs well in field or container plantings, and will flower up to 8 weeks later than standard basil. Bright green leaves offer robust flavor that stands up to cooking. ***12501***

EVERLEAF LEMON

Lemon. Upright plants have short internodes and a large volume of bright, lemon-flavored leaves. The vigorous plants will flower 6-8 weeks later than other lemon basils on the market. An excellent choice for both in ground and container plantings. ***13425***

EVERLEAF THAI TOWERS

Thai. Upright columnar plants reach 2-3' tall with medium green licorice-flavored leaves and soft purple stems. Well-branched plants have short internodes, handle cutting well, and flower 10-12 weeks later than other Thai basils for exceptional harvest potential. Suited for plant sales and container, in-ground, and hydroponic growing. Excellent flavor for cooking and a stunning ornamental. ***13426***

ITALIAN LARGE LEAF

Genovese. Well-branched plants grow 12-18" tall with a 24" spread. The broad dark green glossy leaves are 2-4" wide and are very aromatic. As one of the highest yielders for pot culture, Italian Large Leaf is an excellent candidate for container growing and live herb production. ***11937***

PROSPERA PREMIUM F1 ORGANIC

Genovese. Growers were begging for better disease resistance in Basil, and it has arrived! Prospera® showed outstanding performance in trials when it came to Downy Mildew resistance. A beautiful plant habit with bolt resistance, it provides long lasting production of aromatic Genovese basil. Suitable for protected culture and open field production. High resistance to Downy Mildew. Intermediate resistance to Fusarium. ***12822***

BASIL (CONTINUED)

PROSPERA RED® F1 ORGANIC
Red. The first Downy Mildew and Fusarium resistant red basil, Prospera® Red has shiny dark purple leaves suitable to cut, pot, and baby leaf production. The upright plants are well adapted to field, container, and protected culture growing and the Genovese-type leaves are 3" long with a smooth, slightly cupped shape. ***13407***

PURPLE RUFFLES
Red. This popular basil adds distinction to salads and vinegars, and makes a wonderful ornamental with its fragrant deep-purple ruffled leaves and light pink flowers. Vigorous well branched plants reach 18-24" tall and grow well in-ground or in containers. Approx. 5% of plants have purple/green leaves. (P.V.P.) ***01933***

RED RUBY
Red. A vigorous purple Italian Large Leaf type, Red Ruby produces flat 3" long leaves on 18-24" plants. This high yielding variety has great flavor and a copper colored tinge to its purple leaves. ***11941***

RUTGERS PASSION DMR
Genovese. From Rutgers University comes a vigorous sweet basil with high resistance to Downy Mildew. Well suited for potted plant and field production, plants have a high leaf-to-stem ratio, larger slightly cupped leaves, and are very slow to bolt. ***12844***

SIAM QUEEN
Thai. Large 3-4" leaves are sweet and spicy with an anise overtone when fresh, while dried leaves have a licorice-basil aroma. Compact inflorescences above bright green foliage make this tall (30-40") well-branched Thai Basil ideal for ornamental gardens and patio containers. ***00937***

CATNIP
Perennial; 9.5M sds/oz.
Uses: Medicinal, Tea, Cat Stimulant
An upright 30" plant with greenish-gray foliage and small blue flowers. ***00934***

CHAMOMILE, GERMAN
Annual; 270M sds/oz.
Uses: Aromatic, Medicinal, Ornamental, Tea
Delicate daisy-like white flowers with yellow discs are held on plants that can reach 2' tall. Prolific flowering. ***00046***

CHIVES
Perennial; 24M sds/oz.
Uses: Culinary, Ornamental

CHIVES
Smooth slender hollow leaves about 12-18" long are produced in clumps. Chives offer a mild onion-like flavor to cooking and produce delicate flowers in the landscape. ***00936***

GARLIC CHIVES (CHINESE LEEKS)
This flat-leafed chive expresses strong garlic flavor. The chopped leaves are often used to replace garlic in sauces and other recipes. Compact plants produce delicate white flowers. ***00942***

NELLY ORGANIC
A dark blue-green, fine- to medium-thick chive with a vigorous upright habit. Nelly is resistant to disease and thrip damage and is versatile for fresh and processing markets. The long slender leaves are flavorful and easy to bunch. ***13143***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

CILANTRO

Annual; 1.9M sds/oz.
Uses: Aromatic, Culinary, Medicinal

CARIBE

Caribe is a widely adaptable variety with upright medium-green foliage and sturdy stems that bunch easily. It can withstand high planting densities and tolerate bolting. With good-sized, aromatic leaves, Caribe is a nice option for any production application, including bunching, plant sales, and microgreens. ***13893***

LEISURE

An extra slow bolting strain that performs well in hot weather. Flat leaves offer pungent flavors and are produced on stems that reach 1-2' tall. ***00956***

SANTO

Fast growing, yet remarkably slow bolting, this strain of Cilantro produces strong stems for bunching, reaching 1-2' tall. The broad celery-like leaves are deep green with notched margins and add strong flavor to cooking. ***00954***

DILL

Annual; 12M-21M sds/oz.
Uses: Aromatic, Culinary,Medicinal

BOUQUET

This superior strain is very vigorous and easy to grow, while the flavor is strong and pungent. Use the green leaves for flavoring and the dried branches and seeds for pickling. Plant height: 36". ***00459***

DUKAT

Our heaviest yielding strain of both deep green leafy foliage and large umbels. Plants are taller than Bouquet and produce a strong aromatic flavor. ***00457***

FERNLEAF

Dwarf 18" plants produce abundant blue-green foliage and are very slow to bolt. Fernleaf is an excellent choice for pack and container sales, as well as bunched baby leaf dill. Plants grow well in open field, container, and hydroponic settings. ***01939***

HERA ORGANIC

A beautiful blue-green dill for baby leaf, fresh bunching, or whole plant markets. Hera has compact 18-24" stems that are easy to bundle and the plants are slow to bolt. ***12386***

OREGANO

Perennial; 300M sds/oz.
Uses: Aromatic, Culinary

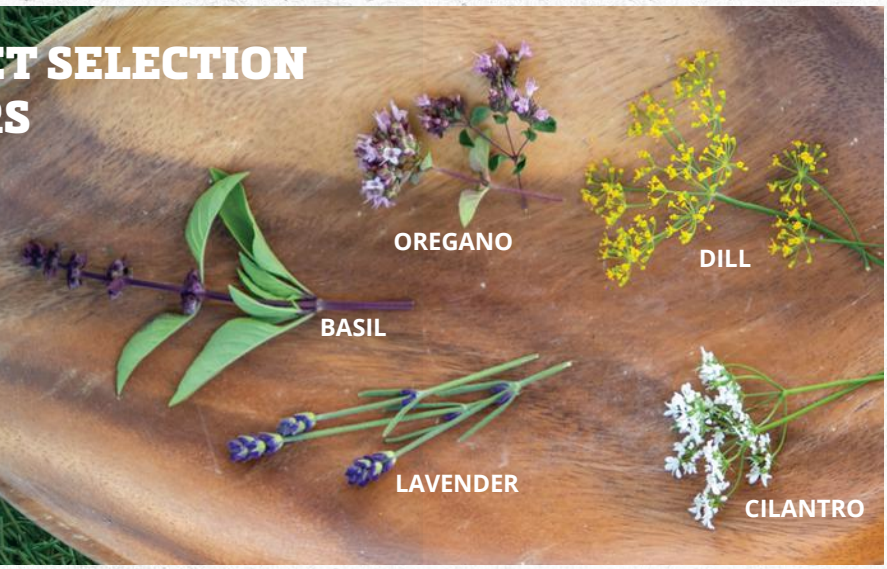

VULGARE

Erect bushy 8-18" plants produce purple flowers and pungent leaves that are an excellent seasoning for cooking. Also called "Wild or Pot Marjoram". ***00940***

EXPAND YOUR MARKET SELECTION WITH EDIBLE FLOWERS

Many common vegetable and herb crops have edible flowers that are sought after by chefs and home cooks. Harvest blossoms from squash and herb plants to offer beside your cut herbs, greens, and micro greens, or use flowers in value added products like teas, pickles, or infused olive oil or vinegar.

Visit harrisseeds.com to find more edible flowers like nasturtium, pansy, and viola.

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

PARSLEY
Biennial; 18M sds/oz.
Uses: Culinary

BANQUET
Curly. A tightly curled variety that is excellent for wintering over. The dark green leaf color is enhanced in cooler temperatures. ***00630***

FOREST GREEN
Semi-curled. A vigorous, very dark green semi-curled type that tolerates heat and repetitive cuttings very well. The long, stiff stems and thick leaves make it easy to cut and bunch. ***00632***

LAICA
Flat Leaf. Laica is a fast-maturing and high-yielding Italian parsley with excellent regrowth capacity. Vigorous upright plants measure 15" tall with strong stems that are easy to harvest. The large dark green leaves have excellent sweet flavor and intermediate resistance to Septoria. ***14067***

PEIONE
Flat Leaf. This popular variety has dark green glossy leaves that stand tall and full. Strong stems with heavy leaf yields make it a must for bunching. Vigorous plants offer excellent regrowth for continued harvest. High resistance to Downy Mildew. ***12387***

PLAIN ITALIAN DARK GREEN
Flat Leaf. Producing flat, glossy dark green leaves, this 'celery-leaf' parsley grows vigorously and possesses a strong, distinctive parsley flavor. ***00639***

ROSEMARY
Tender Perennial; 20M sds/oz.
Uses: Aromatic, Culinary, Medicinal

This upright 2' shrubby evergreen produces needle-like leaves that are used fresh or dried on meats and seafood. ***00952***
(Rosemary from seed has a low germination rate. Consider our selection of liner produced varieties for culinary and ornamental use.)

SAGE
Perennial; 3.5M sds/oz.
Uses: Aromatic, Culinary, Medicinal, Ornamental

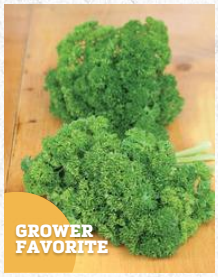

FANNI ORGANIC
Fanni produces large oval gray leaves with excellent yields and dependable germination. Use fresh or dried for seasoning or fragrance. Suitable for indoor and open field production. Overwinters well. ***12935***

STEVIA
Annual; 75M sds/oz.
Pkt = approx. 25 sds; Uses: Culinary.

CANDY ORGANIC
Stevia is 20-30 times sweeter than sugar cane and heat stable for cooking, yet is non-caloric. The plant is a tender perennial that prefers well drained soil and requires very little additional care. ***12389***

THYME
Perennial; 110M sds/oz.
Uses: Aromatic, Culinary, Medicinal, Ornamental

AYELET ORGANIC
Summer/French Thyme. Small oval gray-green leaves grow on upright shrubby perennial plants. With excellent aroma and a mild, sweet flavor, Ayelet is suitable for culinary and medicinal uses. Strong overwintering. ***12959***

KOHLRABI

KOLIBRI F1 ORGANIC

48 Days. Striking purple bulbs have white interiors with sweet mild flavor. Start harvesting at the 3" stage. Excellent field holding ability allows for longer harvests of large bulbs with high interior quality. Grow along with Korist F1 for a multi-colored assortment. Intermediate Resistance to Black Rot. ***12381***

KORIST F1 ORGANIC

48 Days. Globe shaped bulbs have white fleshed interiors that are crunchy, mild, sweet, and juicy. Long field holding ability allows for extended harvest without woody interiors. This green variety is very similar to Kolibri F1, and when grown together they make a nice multi-colored pair. High resistance to Downy Mildew. ***12392***

KONAN F1

49 Days. An early maturing All-America Selections Winner that really stood out in our in trials. Konan produces an upright plant habit with smooth bulbs and excellent texture and flavor. Performs well in cool and warm weather. High resistance to Fusarium Yellows. ***12631***

WINNER F1

54 Days. This hybrid kohlrabi produces very smooth light green bulbs that grow to weigh about 18 oz. Its vigorous upright plant produces bulbs that have a fresh fruity taste and good holding ability. While the leaves are still young and tender, they can be cooked like kale or collards. ***11494***

LEEK

RALLY F1 ORGANIC

85 Days. Producing heavy uniform shanks, Rally is ready to harvest a few days earlier than Megaton. Upright blue-green foliage forms a tight fan and has intermediate resistance to Rust and Thrips. The long shanks have excellent color are very easy to clean. ***13115***

COMANCHE F1 ORGANIC

100 Days. Long dark green shanks are produced from strong upright plants. Comanche is a widely adapted variety that has a flexible harvest window and can be sold in fresh market, restaurant, or wholesale distribution. ***12823***

LIVE PLANTS *Spring Program*

LEEK - LANCELOT

LANCELOT

75 Days from transplant. This fast growing early variety produces long 12-14" white shafts with dark blue-green upright flags. It is bolt resistant and virus tolerant. Although Lancelot matures early, as long as leeks are kept blanched they will produce beautifully all summer long. See onion transplants (page 95) for shipment information.
50-60 plants per bunch. ***07017***

2 bunches $50.00
30 bunches (1 box) $165.95
150 bunches (5 boxes) $768.75

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

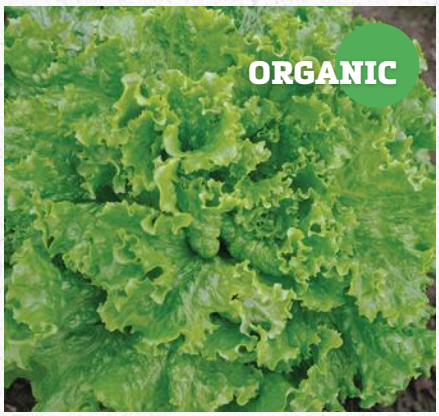

LETTUCE

Culture: Lettuce prefers cool weather and is easily direct sown or transplanted. An increasing number of growers are starting transplants in 144 to 288 cell plug trays 3-4 weeks prior to transplanting outdoors. Lettuce prefers loose loams (pH 6.0-6.8) or organic soils (pH 5.5-6.0). Raised beds help air movement and soil drainage to control soil-borne root and leaf diseases. **Days to maturity** are from direct seeding and for variety comparison only. **Avg. seeds/lb. = 425,000 (raw seed).**

BATAVIA/SUMMER CRISP

BERGAM'S GREEN MTO ORGANIC

53 Days. Bergam's Green produces uniform marketable heads, even in hot weather. The habit is well-filled and controlled, so heads are large but manageable. Bergam's Green shows tolerance to bolting and resists tipburn well. The frilled, deep medium green leaves retain mild sweetness in hot growing conditions, and have high resistance to Lettuce Die Back, and intermediate resistance to Corky Root Rot. ***11438***

BERGAM'S GREEN MTO ORGANIC

MUIR MTO ORGANIC

50 Days. The sweet crispy light green leaves of this slow growing variety are upright and form a well filled heart. Plants are strong against bolting and tip burn. Appropriate for hydroponic, open field and protected culture. High resistance to Downy Mildew, Lettuce Dieback Complex and Lettuce Leaf Aphid. Intermediate resistance to Lettuce Mosaic Virus. ***12393***

MUIR MTO ORGANIC

STARSTRUCK

50 Days. A dark green Batavia lettuce with a uniform rectangular leaf and wide petiole suitable for full-head or cut-leaf markets. Starstruck has excellent field holding ability and tip burn tolerance and cleans nicely in the field. Not mosaic tested. ***13254***

STARSTRUCK

BIBB

BUTTERCRUNCH

64 Days. Slow bolting and long standing, Buttercrunch has been a favorite of fresh market growers for years. Loosely folded center leaves form a high quality heart of sweet crisp tender ribs. The thick dark green outer leaves make an attractive Bibb type. A vigorous grower, it stands exceptionally well in all seasons. Not mosaic tested. ***00505***

BUTTERCRUNCH

BUTTERHEAD

CERVANEK

53 Days. An attractive red butterhead that produces firm heavy heads with a tender, slightly blistered leaf. This versatile variety is tolerant to bolting and holds its deep red hues well in the heat. Best used for spring and fall production, Cervanek maintains uniformity and quality in variable conditions. Not mosaic tested. ***12775***

CERVANEK

HARMONY MTO

68 Days. This remarkably uniform butterhead lettuce has excellent internal quality and weight. It produces a large head with rich deep green color and a smooth glossy leaf. Harmony has good tolerance to bolting and tip burn, and intermediate resistance to Downy Mildew. **Pelleted seed only.** ***00526***

HARMONY MTO

MARCIANO MTO ORGANIC

50 Days. A compact variety with smooth leaves showcasing deep burgundy color and fresh bright green, well filled interiors. Sweet tender leaves are tolerant to tip burn, and short cores are slow to bolt. High resistance to Downy Mildew, Lettuce Leaf Aphid, and Lettuce Dieback Complex, and intermediate resistance to Lettuce Mosaic Virus. ***12952***

MARCIANO MTO ORGANIC

MILAGRO MTO ORGANIC

60 Days. Milagro is a highly adaptable variety that produces in multiple applications. The dark green heads have a nice leaf gloss on an impressive plant frame. Heads are heavier than other butterhead varieties and great for processing and packing. High resistance to Downy Mildew, Lettuce Leaf Aphid, and Lettuce Dieback Complex, and intermediate resistance to Lettuce Mosaic Virus. ***12836***

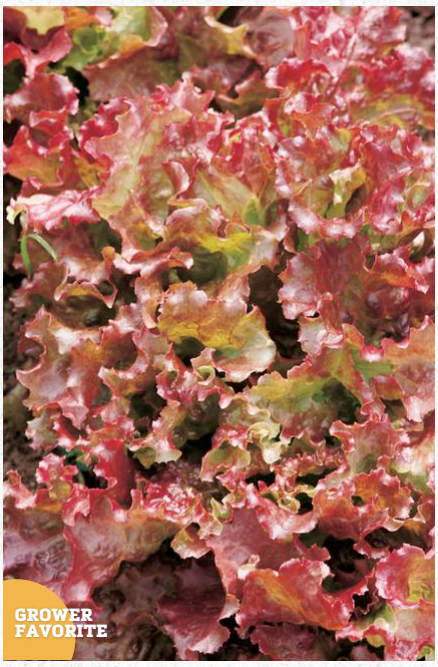

MILAGRO MTO ORGANIC

Organic Harris Seeds Exclusive

DANYELLE

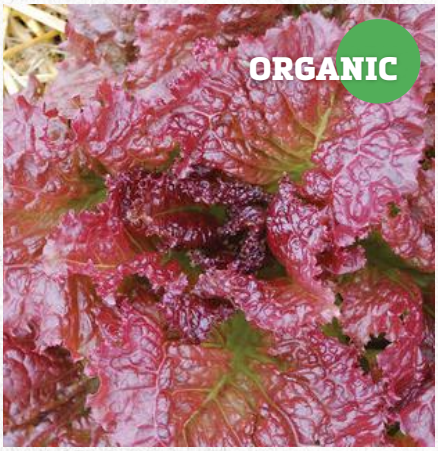

NEW RED FIRE MTO

MANZANITA

RED SALAD BOWL

RED VELVET ORGANIC

RED LEAF LETTUCE

DANYELLE

51 Days. Danyelle is an excellent Red Salad Bowl type with improved uniformity and deep red color. Its deeply-lobed oak-like leaves form a full rosette and stay tender and sweet without turning bitter. Danyelle has shown excellent holding ability and rates high on our list of red leaf varieties. Not mosaic tested. ***11521***

MANZANITA

48 Days. Vibrant bronze-red leaves fade to green at the center and are smooth with a wavy edge and prominent rib. The upright tight heads have a short core, are slow to bolt, and resist tip burn. A reliable performer in high-temperature situations. ***13442***

NEW RED FIRE MTO

45 Days. A grower favorite because of its deep intense red color that carries well down into each leaf. The compact plant is dense with excellent uniformity of form and color. It's slow to bolt and makes very good weight. A highly marketable leaf lettuce perfect for spring and early summer in temperate areas, and early summer to fall in cooler regions. ***00512***

RED SALAD BOWL

51 Days. Attractive burgundy-red, deeply lobed, oak-like leaves form a full rosette. The leaves hold their mild non-bitter quality well, and the plant is slow to bolt. Although the color is best in cool weather, Red Salad Bowl grows well all season. An excellent variety for baby leaf production. Not mosaic tested. ***01527***

RED VELVET ORGANIC

55 Days. Vivid maroon colored leaves have rich color and green tints toward the base of the head. The rich mild taste and crisp texture is appealing to any palate and is great in mixes. Not Mosaic tested. ***12545***

SEE PAGE 85
for lettuce prices

Extend your season!

Incorporate floating row covers in your high tunnel environment to extend your lettuce production season.

See pages 238-239 for crop protection supplies.

GREEN LEAF LETTUCE

BLACK SEEDED SIMPSON
45 Days. Vigorous and fast growing, this popular item develops large bunches of very tender light green curled leaves of top quality. With mild heat tolerance, thousands of our customers appreciate its dependability over any other kind. Not mosaic tested. ***00504***

GREEN SALAD BOWL
48 Days. The best loose-leaf lettuce for roadside sales, Green Salad Bowl holds its flavor and fine texture despite summer heat and stays in prime harvest condition for an extended time. Each plant makes a rosette of wavy notched leaves that are always tender, sweet, and delicious. Not mosaic tested. ***00540***

HULK
48 Days. A flexible green leaf lettuce with high quality, thick, dark green leaves suitable for individual leaf harvest when young and full head harvests at maturity. The round glossy leaves resist tip burn and hold well in the field. Intermediate resistance to Verticillium. ***13441***

SPECKLED ORGANIC
48 Days. Unique splashes of red spots add eye appeal to any salad mix. Passed down by Amish families for generations, they preserved this mild, buttery tasting heirloom so it could be enjoyed by all. Not Mosaic tested. ***12437***

LETTUCE MIXES

COLORED ROMAINE BLEND

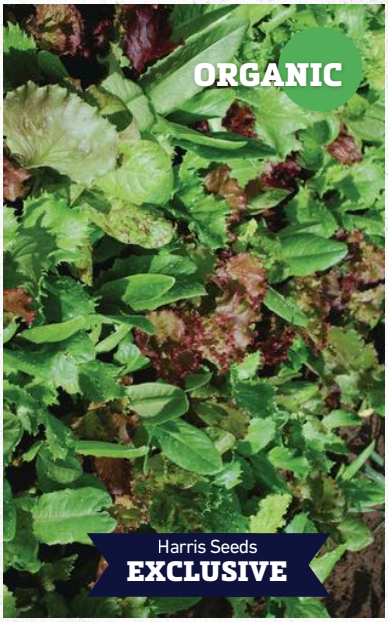

This specialty romaine blend combines three different colored romaine types that have been bred specifically for baby leaf production. Colors include red, green with red speckles, and solid green. Colored Romaine Blend is quick to reach a harvestable stage and has shown quick recovery after cutting. Not mosaic tested. ***11504***

HARRIS' LETTUCE BLEND

This blend is a formulated combination of six different lettuce varieties and offers a stunning mix of colors, textures, and leaf shapes. Varieties include: Cimmaron, Red Salad Bowl, Tango, Black Seeded Simpson, Green Salad Bowl, and Royal Oakleaf. This blend balances green and red tones and combines refined smooth leaves with ruffled leaves that provide loft and body. Not mosaic tested. ***11525***

HEIRLOOM CUTTING BLEND ORGANIC

A well balanced formulation of green, red and speckled loose leaf, green butterhead, and green romaine lettuces. Sow close and cut early for baby leaf, or give more space and time for larger leaves. Not Mosaic tested. ***12395***

HEIRLOOM CUTTING BLEND ORGANIC

EAZYLEAF® LETTUCE

The innovative Eazyleaf one-cut lettuce assortment offers you the convenience of whole head production, and the marketing flexibility of loose leaf and whole head sales. Compared to traditional baby leaf spring mixes, Eazyleaf delivers more texture, flavor, volume and shelf-life, and a wider harvest window.

Eazyleaf varieties feature a narrow leaf attachment and high leaf count. With one cut from the base in the field or the packing shed, uniform leaves separate into individual pieces ready for a salad mix. Heads are appropriate for mechanical or hand harvest with no removal of cores necessary. All varieties in the Eazyleaf assortment offer high resistance to Downy Mildew, Red Aphid, and Lettuce Dieback Complex.

PlantingRecommendation:

- Mechanical Harvest: 3-4 inch in-row spacing
- Hand Harvest or Larger Heads: 6-8 inch in-row spacing

BRENTWOOD MTO ORGANIC

55 Days. Red Leaf. A great one-cut variety with smooth texture and broad dimensions. Contrasting dark cherry and bright light green gradation on the leaf is striking. Pairs perfectly with Ezrilla. High resistance to Downy Mildew and Lettuce Leaf Aphid, intermediate resistance to Lettuce Mosaic Virus. ***12733***

EZPARK MTO ORGANIC

55 Days. Green Tango. Ezpark has impressive yields of uniform deep emerald green leaves with narrow attachments and excellent loft. The plants hold well in the field, resist tipburn, and perform in all seasons. ***13145***

EZRILLA MTO ORGANIC

55 Days. Green Tango. Ezrilla is a unique tango that has vibrant green tips and a sweet blanched center. Widely adapted to most seasons and regions. Very slow to bolt and tolerates heat without becoming bitter, even after the second cutting. High Resistance to Lettuce Dieback Complex, Downy Mildew and Lettuce Leaf Aphid, and intermediate resistance to Lettuce Mosaic Virus. ***12732***

HAMPTON MTO ORGANIC

55 Days. Green Oakleaf. A very dense, high leaf count, one-cut variety with shiny dark-green leaves. It has high leaf set ideal for hand cutting or mechinal harvest. Hampton is a flexible lettuce variety for year round production. Very slow to bolt. High resistance to Lettuce Dieback Complex, Downy Mildew and Lettuce Leaf Aphid, intermediate resistance to Lettuce Mosaic Virus. ***12734***

RHONE MTO ORGANIC

55 Days. Red Tango. A strongly incised red tango lettuce with a crunchy texture and narrow leaf attachments. Rhone has an attractive red and green color contrast and excellent multi-cut quality. Plants offer strong disease resistance, bolt tolerance, and tipburn tolerance. ***13146***

BLUEROCK

CIMMARON

DRAGOON MTO ORGANIC

COASTAL STAR MTO ORGANIC

JARA MTO ORGANIC

ROMAINE/COS LETTUCE

BLUEROCK

58 Days. Bluerock is a versatile dark green romaine that performs well across regions and seasons, with resistance to tipburn and bolting. Dense 14" heads are multi-use for the heart, carton, and processing markets with a small core and crunchy sweet leaves. High resistance to Downy Mildew (7-9), Tomato Bushy Stunt Virus, and Lettuce Leaf Aphid. ***13444***

CIMMARON

60 Days. A beautiful red romaine for specialty markets. Heads are early maturing and the flavorful sweet crisp leaves bear a unique plum-red color with green veins. Sure to be a hit with consumers who are looking for something different. Not mosaic tested. ***00513***

COASTAL STAR MTO ORGANIC

55 Days. Similar to Darkland Cos in shape, but taller and darker. Heavy heads of sweet crunchy leaves are suitable for CSA boxes, hearts and fresh pack. Intermediate resistance to Corky Root Rot. ***12396***

DRAGOON MTO ORGANIC

44 Days. A uniform green little gem romaine with compact heads and a semi-savoy leaf. Plants have a short core and are strong against bolting, making Dragoon suitable for open field or greenhouse production. Little gems are great for fresh market sales and fetch a premium price. High resistance to Downy Mildew, Lettuce Leaf Aphid, and Lettuce Dieback Complex, and intermediate resistance to Lettuce Mosaic Virus. ***12737***

JARA MTO ORGANIC

55 Days. A standout in our trials, Jara was bred to perform in adverse conditions. This green romaine produces beautiful dense hearts and is slow to bolt in the summer heat. A robust disease package protects plants against Downy Mildew, Fusarium Wilt, Lettuce Leaf Aphid, and Lettuce Dieback Complex. ***12839***

LASSEN

60 Days. This upright, dark green romaine has tight hearts and is slow to bolt. A strong performer in the heat, Lassen is extremely uniform, tolerates tipburn, and has outstanding protection against Fusarium. ***13501***

LASSEN

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

NEWHAM MTO ORGANIC

52 Days. An improved little gem type with thick dark-green leaves. Newham has excellent fill out, strong tip burn resistance and remarkably sweet flavor. Widely adapted to most climates, especially coastal regions. Little gems are great for fresh market sales and fetch a premium price. High resistance to Downy Mildew, Lettuce Leaf Aphid, and Lettuce Root Aphid and intermediate resistance to Lettuce Mosaic Virus. ***12738***

POMEGRANATE CRUNCH MTO ORGANIC

50 Days. This early maturing mini romaine has an open habit and smooth butterhead-like leaves of deep red on the outside and red to green inside. A unique color combination for salad mix, hearts or plating. High resistance to Downy Mildew and Lettuce Dieback Complex. ***12397***

SONORA

60 Days. A large, dark green romaine that is suitable for box or bulk use. Sonora's uniform heads weigh an average 1.4 lbs. with good internal color, a small core, and a sweet crisp texture. The tidy upright plants average 12" tall and are tolerant to tipburn and bolting. High resistance to Fusarium, Downy Mildew, Tomato Bushy Stunt Virus, and Lettuce Leaf Aphid. ***13443***

SUPER JERICHO MTO ORGANIC

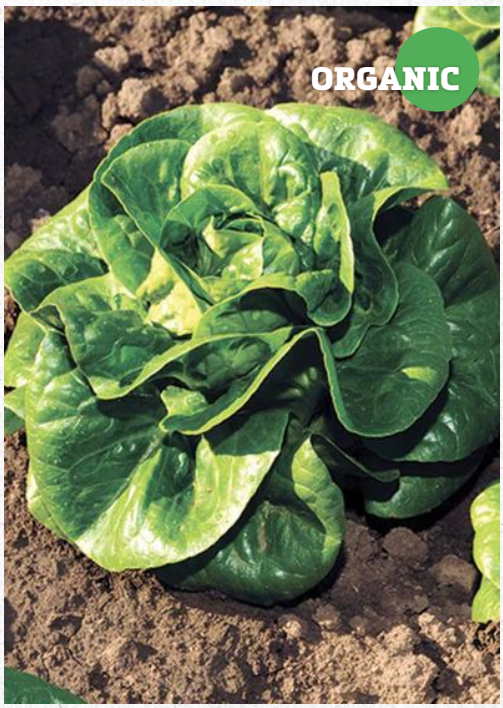

60 Days. This romaine variety was developed to endure the heat of summer in arid regions. It performs extremely well during summer heat in the U.S. as well as in cool season plantings, while retaining a sweet crisp texture. Super Jericho produces sturdy robust plants with large crisp light green leaves. Resistant to tipburn and Lettuce Mosaic Virus. ***11503***

TRUCHAS MTO ORGANIC

48 Days. A lighter colored red romaine that can be grown to fit the class of both little gem and mini romaine. Upright and open plant habit produces uniform sized leaves that self-blanch closer to the core. Flavor is mild and crunchy. A great variety to pair with Dragoon. High resistance to Downy Mildew and Lettuce Dieback Complex, and intermediate resistance to Lettuce Mosaic Virus. ***12825***

TRACKER

ICEBERG LETTUCE

AC ESTIVAL
70 Days. A medium to large, thick textured iceberg that performs well in high heat conditions. It is slower growing and slow to bolt, giving heavier marketable weights and better field holding ability. Plants have short cores and are tolerant to tipburn and Fusarium. ***13381***

BIG SHOT
70 Days. A medium to large iceberg with thick leaf texture and dark color. Big Shot performs best from cool to warm growing slots, showing consistent strong heading and short cores. Tolerant to tipburn and Fusarium. ***13506***

ELIMINATOR
70 Days. Consistent high yields make Eliminator a standout variety. Medium green, dense heads have short cores and show good tolerance to Fusarium and tipburn. Heads are held up off the ground and are easy to cut and clean. This variety handles warm planting conditions and resists bolting providing growers with reliable production in variable conditions. ***13601***

HOTSHOT
70 Days. A high-yielding iceberg suited for cool to warm growing slots, Hotshot has a large plant frame and thick leaf texture. The uniform heads have short cores and tolerance to tipburn and Fusarium. A strong performer with superior horticultural traits. ***13458***

MEDIMO
70 Days. A mid-early lettuce that performs well in all seasons with high tolerance to bolting and heat. Tight dense heads are well- wrapped by medium-green slightly blistered leaves that are crisp and sweet. Medimo stood out in our trials with excellent quality and appearance. Intermediate resistance to Lettuce Mosaic Virus. Not mosaic tested. ***12777***

MERIDIAN
75 Days. A versatile variety that performs across climates, Meridian forms well-filled uniform heads with good weight. The heads have a nice shape, short core, and are easy to cut and clean. Plants are compact, resist bolting, and carry high resistance to Downy Mildew and intermediate resistance to Fusarium (race 1-3). U.S. Patent 9,706,743. ***13267***

TRACKER
70 Days. A reliable performer, Tracker produces large, dense heads on an upright plant. Heads sit high off the ground, protecting them in wet conditions and making them easy to harvest. This variety performs well in high heat conditions and is slow to bolt. Plants show good tolerance to tipburn and Fusarium wilt, supporting consistent yields across seasons. ***13602***

PLANTING THE RIGHT VARIETIES AT THE RIGHT TIME FOR YOUR REGION IS CRUCIAL TO SUCCESS GROWING ICEBERG LETTUCE.

A variety may work well during particular harvest slots, but then perform poorly during other times. Please use these charts as a general guide for your region and harvest schedule throughout the season. For more specific slotting information, please contact your Harris Seeds regional sales rep.

TOP 10 LETTUCE VARIETIES

If you are not sure of which lettuce varieties to grow, pay attention to your fellow growers! These varieties are their favorites based on quality, performance, and customer satisfaction.

1. Heirloom Cutting Blend Organic
2. Buttercrunch
3. Harris Lettuce Blend
4. Harmony MTO
5. Sonora
6. Green Salad Bowl
7. Muir MTO Organic
8. New Red Fire MTO
9. Brentwood MTO Organic
10. Hot Shot

PELLETED LETTUCE SEED

Raw lettuce seed can be difficult to sow precisely (precision plant). Pelleted seed helps solve this problem. The round/elliptical pellets are firm, smoother, and larger than the raw seed and much easier to precision plant, saving you thinning time, money, and aggravation! Average buildup will fluctuate with raw seed size and density of coating material.
All pelleted seed is untreated.

DIVERSIFY YOUR SALAD MIXES

Compliment your lettuce offerings with these popular salad fixings to increase your profits!

CLEOPATRA F1

APHRODITE F1

ACCOLADE F1

ROCKSTAR F1

MELONS

Culture: In short season areas, seed into Jiffy Pots in greenhouses at 75-80°F. soil temp., 3-4 weeks before field setting. South of U.S.D.A. hardiness zone 6, direct sow at least 2 weeks after average last frost date. Be sure to protect young plants from frost or damaging winds in the field. Since they prefer warm temperatures, row covers or plastic tunnels can serve both purposes. All plantings benefit from plastic mulch to maintain soil temperature, retain moisture, and control weeds in the row. Sandy loam soils at pH 6.0-6.8 are preferred for melons. These are insect pollinated crops; yields are enhanced by adding beehives. See Growing Supplies section, starting on **pg. 216** for Jiffy products, row covers, and mulches. **Days to maturity** are from transplanting and for variety comparison only.

EASTERN FRESH MARKET & SHIPPING MELONS

Avg. seeds/lb. = 18,000.

GODDESS F1

68 Days. Goddess is a one-of-a-kind melon that produces 4-6 lb. fruit in only 68 days. Grow this melon to get a jump on the competition — it is sure to outperform all other early melon varieties. Oval shaped fruit has slight suturing and medium-coarse netting. Goddess' orange flesh is very flavorful and produces sugars that rival many main season varieties. Intermediate resistance to PM (races 1,2) and FW (races 0,1,2). ***11571***

CLEOPATRA F1

70 Days. Offers growers consistent fruit set, good size, and great eating quality foran early variety. The 4-6 lb. fruit have a tight seed cavity andfirm delicious salmon colored flesh. Their exteriors have slight ribs and are covered with medium netting. This is a greatmelon for local delivery, roadside stands, or farmers' market sales. High resistance to FW (races 0,1,2) and PM (races 1,2). ***11217***

APHRODITE F1

72 Days. Aphrodite produces large melons weighing 6-8 lbs. and matures 2-3 days earlier than Athena. It has shown improved netting, which is an important advantage for fall plantings or under stressful conditions where the netting can be weak. The fruit store and ship very well after harvest and the salmon colored flesh is firm and sweet. High resistance to FW (races 0,1,2) and PM (races 1,2). ***11220***

ATLANTIS F1

ACCOLADE F1

73 Days. An Eastern shipper with improved flesh quality and extended shelf life, Accolade produces 5-6 lb. medium netted oval fruit that have firm orange flesh and a small tight seed cavity. Its strong and vigorous vine has high resistance to PM (races 1,2) and FW (races 0,1,2), intermediate resistance to Cotton Aphid and PM (race 3.5) and tolerance to sulfur burn. Best when planted in the early to main season slot. ***12347***

ROCKSTAR F1

73 Days. This second-early Eastern shipper has outstanding eating quality and the disease package needed to achieve high yields. With its uniform 5-7 lb. fruit, high yield potential, and great holding ability, it makes a perfect addition to any melon growing program. Its exterior has slight sutures and medium netting. The orange flesh is firm and consistently produces high sugar levels. Intermediate resistance to PM (races 1,2) and FW (races 0,1,2). ***11562***

ATLANTIS F1 ● *Excellent Shipper*

74 Days. Atlantis is an impressive Eastern melon with strong vines, excellent interior quality, consistent high sugars, and a firm rind that makes it ideal for a long distance shipper. Although developed for the shipping market, its high quality firm deep orange flesh will have great consumer appeal. The 6-8 lb. fruit have medium netting and slight sutures. Intermediate resistance to FW (races 0,1,2) and PM (races 1,2). ***11577***

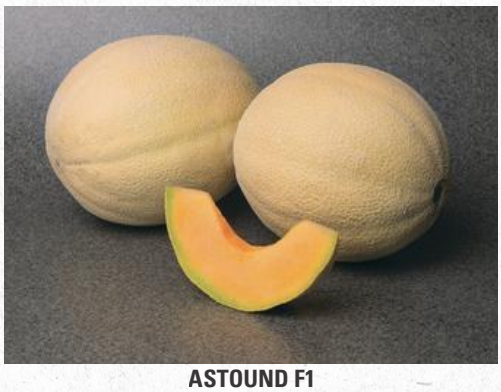

SUGAR RUSH F1

74 Days. An Eastern melon with outstanding quality and sweetness (15% Brix). This firm oval 4-5 lb. melon is an excellent companion for Sugar Cube, with a very similar flavor profile. Medium vines have high resistance to PM (races 1,2) and FW (races 0,1,2). A favorite from our trials and a sure hit with customers. ***12773***

ASTOUND F1

75 Days. Astound is an Eastern shipper that features improved flesh firmness, a tighter seed cavity, and an improved disease package for main to late season plantings. The 5-6 lb. oval fruit have firm orange flesh, high quality appearance, and improved shelf life. Astound's strong vine has high resistance to PM (races 1,2) and FW (races 0,1,2), intermediate resistance to Cotton Aphid and PM (race 3.5) and tolerance to sulfur burn. ***12342***

SUGAR RUSH F1

ASTOUND F1

All-America Selections Winner ● Grower Favorite ● 2027 Introduction Good for Protected Culture

ATHENA F1

75 Days. Athena is the most widely used melon in the Eastern U.S. for its holding ability both on the shelf and for shipping. The 5-7 lb. melons have light ribs, medium netting, and tend to stay firm even when harvested at full slip. This variety does not trade flavor for firmness. High resistance to FW (races 0,1,2) and PM (races 1,2). ***11219***

SOLSTICE F1

Large fruit, great disease package.

76 Days. This large-fruited melon, with the look of the old "Eastern" type melons, offers the full disease package found in today's newer hybrids. Huge 7-9 lb. fruit have deep sutures and heavy ropey netting. High yields and outstanding eating quality have been noted in our trials. High resistance to FW (races 0,1,2) and PM (races 1,2). ***11216***

TRUE LOVE F1 ORGANIC

76 Days. This aromatic 2-3 lb. melon has high sugars and excellent texture that customers are sure to love. Fruit are full-slip at maturity for easy harvest, and plants offer high resistance to FW (race 2) and PM (races 1,2). ***13128***

AFTERGLOW F1

80 Days. Featuring some of the high quality traits of a Tuscan type melon, this unique 5-7 lb. Eastern type has a very firm orange flesh with excellent eating qualities and high sugars (12-14% Brix). The exterior closely resembles an Eastern type melon but the deep sutures will retain some green color. Will slip from the vine when ripe. High resistance to FW (races 0,1,2) and PM (races 1,2). ***12191***

AMBROSIA F1

86 Days. Recognized as one of the best tasting melons for the East, Ambrosia's 4-4½ lb. round fruit have a tan color with medium net and non-distinct sutures. The peach colored flesh has a wonderful sweet flavor, making it a good roadside melon. Intermediate resistance to PM. ***00567***

EXTENDED SHELF LIFE (ESL) MELON

THUNDERSTRUCK F1

80 Days. This Eastern melon can be stored longer post-harvest than other Eastern types, while still having the oustanding flavor and texture expected of this type. Fruit weigh 5-7 lbs. and have exceptional sweetness at 13% Brix. Expect full color change and slip at maturity. Intermediate resistance to FW (races 0,1,2) and PM (races 1,2). ***13136***

TUSCAN MELONS

IPERIONE F1

75 Days. Excellent flavor, great holding ability, and exceptional yield make this Italian netted type a grower's choice. When ripe, skin between netting becomes tan, and green sutures lighten. Fruit do not slip from the vine. High resistance to Fusarium Wilt (races 0-2), and Melon Necrotic Spot Virus. Intermediate resistance to Powdery Mildew (race 1-2, 5). ***12837***

WRANGLER F1

85 Days. Wrangler produces heavy yields of 4-5½ lb. uniform size fruit with slight sutures that retain their green color. The interior offers a very tight seed cavity and thick firm flesh that is sweet and flavorful. Its excellent disease package offers high resistance to PM (races 1,2) and FW (races 0,1,2). Fruit are ready to harvest before full slip when stem edge starts to separate from the fruit. ***11565***

TWEETY F1

CRUISER F1

DURASOL F1

PASSPORT F1

EARLI-DEW F1

DREAM DEW F1

CANARY MELONS

TWEETY F1

70 Days. A large bright yellow melon weighing 4-6 lbs., Tweety's pale ivory-green flesh is mild, sweet, and aromatic. Intermediate resistance to Fusarium Wilt (race 1, 2), Gummy Stem Blight, and Alternaria. ***12989***

DURASOL F1 ●

75 Days. Vigorous vines produce good yields of very attractive canary melons in a concentrated set. Durasol's fruit weigh 4-5 lbs. and their yellow rinds have the classic wrinkled look that canary melons are known for. The oval-shaped fruit offer high quality firm sweet (15% Brix), creamy-white flesh. Very good shelf life after harvest. ***12192***

GALIA MELONS

PASSPORT F1

75 Days. This high quality Galia melon is early to mature. Large 5-7 lb. fruit have very high sugar levels and delicious flavor. The fruit will slip when ripe and the rind turns from green to yellow. ***00572***

HONEYDEW MELONS

EARLI-DEW F1

80 Days. An early round 2½-3 lb. creamy-green hybrid honeydew. The smooth melons have a distinctive lime green flesh of excellent flavor and texture. Earli-Dew slips at maturity like a muskmelon. ***00564***

DREAM DEW F1 ●

82 Days. Large round early maturing fruit have an appealing external cream color and extra sweet flesh that develop sugars early. Dream Dew has high resistance to FW (races 0,2) and intermediate resistance to PM (race 1). ***11218***

WESTERN MELON

CRUISER F1

74 Days. Top performance has made Cruiser the early season standard in the West. The slightly oval 4-5 lb. fruit have uniform netting, excellent exterior color, tight seed cavity, and a medium orange flesh color. Cruiser's exceptional uniformity, concentrated set, and outstanding quality guarantee profitable yields. Intermediate resistance to PM (race 1). ***01565***

All-America Selections Winner ● Grower Favorite ● 2027 Introduction

SPECIALTY MELONS

DIVERGENT F1 ORGANIC

70 Days. By pairing the best attributes of a galia and a cantaloupe, this melon is in a class by itself. Round 3 lb. fruits have a tight inner cavity with sweet, deep orange flesh. Both size and appearance are extremely uniform with a concentrated set. Best picked when background color is half green. This high yielding variety has high resistance to Fusarium Wilt (races 0-2) and intermediate resistance to PM (Gc: 1 & Px: 1, 2 & 5). ***12401***

MELONADE F1

70 Days. This unique melon has a distinct lemon-lime flavor with standard cantaloupe flesh color and texture. Delicious on its own or in culinary creations, Melonade is a repeat favorite in our taste tests. The 4-5 lb. oval fruit have pronounced sutures and medium netting and are ready to cut from the vine when they become pale green to yellow and the nearest tendril has dried. High resistance to FW (races 0-2) and intermediate resistance to PM. ***13242***

SHOCKWAVE F1

85 Days. Shockwave is a long shelf life (LSL) Harper type melon offering growers holding ability for a more controlled pick. It has a great eating quality with firm sweet (15% Brix) orange flesh. Oval- shaped fruit are smooth and non-sutured with a very tight seed cavity. Harvest when skin has a golden fleck and stem slips. Intermediate resistance to PM (races 1,2) and FW (races 0,1,2). ***12194***

SENSATION F1

85 Days. Sensation is a one-of-a-kind variety that has excellent taste, texture, sweetness, and aroma. If harvested when the rind is turning from green to yellow, the flesh will be green and white, crisp and sweet, and shelf life is best. When melons are allowed to fully mature, flesh will be pure white, sweet, and soft. The 5½-6 lb. fruit have sparse but distinctive netting over green, yellow, and orange skin. High resistance to PM (races 1,2) and FW (races 0,1,2). ***11572***

SINGLE-SERVING MELON

SUGAR CUBE F1

Best disease resistance

81 Days. Sugar Cube is a small personal-sized 2 lb. melon that offers the best disease package of any melon variety. Although Sugar Cube is small, it is big on taste with deep orange flesh that has superb eating quality. The round fruit have medium netting with no sutures, and they hold up well in cold storage after harvest. Resistant to PM (races 1,2), FW (races 0,1,2), ZYMV, PRSV, and WMV. ***11575***

OKRA

CLEMSON SPINELESS

55 Days. The standard dependable variety grown in the U.S. for chop- ping into soups and for fresh market sales. The bright green tapered pods are entirely spineless and of very high quality. Vigorous and productive, the plants grow 4' tall. ***00599***

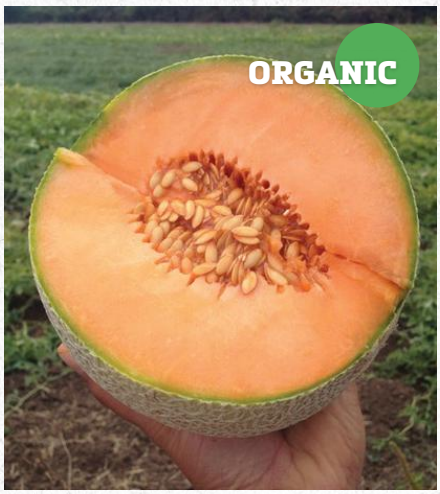

JAMBALAYA 2.0

50 Days. An early maturing okra that offers high yields of very uni- form shiny dark green pods with excellent quality. Manageable com- pact plants set continuously throughout the season. A great performer for market growers and home gardeners alike. ***12477***

ONEIDA F1

YANKEE F1 ORGANIC

POWELL F1 ORGANIC

CALDWELL F1

ONION SEED

LONG DAY YELLOW

KILLINGTON F1

96 Days. An early maturing yellow long-day onion for transplant or direct seeding in Northeast growing regions. Killington has a large round bulb with a small neck, medium-colored skin, and good skin retention. The strong root system lends itself to good size and strong yield potential. Medium storage until February-March. High resistance to Pink Root and intermediate resistance to Fusarium Basal Rot. ***13555***

SADDLEBACK F1

100 Days. With a strong root system, early maturity, and high yield potential, Saddleback is a dependable variety for a range of conditions. The large uniform bulbs are globe-shaped with medium brown skin and small necks. Suitable for direct seeding or transplant and medium storage for up to 5 months. Intermediate resistance to Fusarium and Pink Root. ***13253***

ONEIDA F1

104 Days. Medium-large yellow bulbs measure 4-5" and have a fine neck and strong brown skin. Oneida produces excellent transplants, has high yield potential, and can store until February. Intermediate resistance to Fusarium Basal Rot and Pink Root. ***13572***

POWELL F1 ORGANIC

108 Days. A productive long-day onion with uniform size, strong skin, and good storability. The upright plants have high resistance to Downy Mildew and intermediate resistance to Pink Root. ***13403***

RIDGELINE F1

108 Days. Ridgeline is a long-day yellow Spanish type with Jumbo, globe-shaped bulbs and strong skin. It performs well either transplanted or direct seeded and is suited to both fresh and long storage markets with narrow necks and high process recovery rates. Intermediate resistance to Fusarium Basal Rot and Pink Root. ***13446***

TALON F1 ORGANIC

109 Days. A beautiful copper colored strong skin gives this variety great long term storage. The nicely shaped 4-6" bulbs grow with foliage that contains a layer of wax which acts as a natural barrier to fungal diseases, such as Purple Blotch, Botrytis and Stemphylium Leaf Blight. ***12405***

YANKEE F1 ORGANIC

109 Days. A dark brown thick skin gives this variety superior long term storage. Globe-shaped 3-4" medium size bulbs are grown with foliage that has high resistance to Downy Mildew. ***12406***

CALDWELL F1

115 Days. This widely adaptable long-day yellow onion sets super colossal, globe-shaped bulbs with a rich bronze scale. Bulbs have a high ratio of single centers and store for 5-6 months. The plant has a refined neck, robust root system, and high resistance to Fusarium and Pink Root. ***13427***

for onion prices

All-America Selections Winner · Grower Favorite · 2027 Introduction

TRIDENT F1
115 Days. A widely adaptable onion with consistent large to jumbo bulbs, high single centers, and deep bronze color. Great for storage and mechanical harvest with small necks and a durable outer scale. High resistance to Fusarium, Pink Root, and bolting. ***13264***

YELLOW SWEET SPANISH
120 Days. A great producer of large delicious onions that often weigh a pound or more. Bulbs are globe-shaped with heavy golden- brown skin, and the crisp white flesh has a mild delightful flavor. Early boiling onions are easily grown from direct seeding and larger mature bulbs grow from transplants. Stores short term. ***00620***

LONG DAY RED

BLUSH F1
107 Days. With delicately pink colored flesh, Blush is round, hot, and delicious when cooked. An easy to grow, well-adapted long day onion with strong skin and tight necks suited to long storage of up to 7 months. A great choice for growers looking for a specialty variety. Intermediate resistance to Pink Root. ***12853***

RED CARPET F1 ORGANIC
115 Days. Tight bulbs with strong, vibrant red skin store exceptionally well. The globe-shaped bulbs reach 3-4" with a rounded shoulder and the deep red color carries through to the interior layers. Intermediate resistance to Pink Root. ***13153***

RED GARCIA F1
115 Days. A large, globe shaped onion with a dark red color and good skin retention that stores well. Well adapted to both mineral and muck soils, Red Garcia has strong, vigorous tops and is suitable for direct seeding or transplant in areas with a shorter growing season. Intermediate resistance to Fusarium and Pink Root. ***13645***

TANNAT F1
115 Days. An impressive long-day onion with excellent dark red interior and exterior color. The large tops and vigorous root system provide the opportunity for large bulbs with high single centers. Stores for between 4-8 months. Intermediate resistance to Fusarium and Pink Root. ***13256***

LONG DAY WHITE

GLADSTONE F1 ORGANIC
110 Days. Medium to large bright white bulbs reach 4-5" in diameter and resist greening. Bulbs have very firm, mildly sweet flesh with moderate storage ability. Widely adapted dark green plants carry intermediate resistance to Pink Root. ***13154***

WHITE SWEET SPANISH
120 Days. This uniform globe shaped Sweet Spanish type is widely adapted and popular for fresh markets. Its glistening white skin surrounds mild flesh that can be cooked or used raw in salads. Harvest young for scallions or full size for fresh sale or short term storage up to 2 months. ***00623***

SEDONA F1 ORGANIC

HARLAN F1

CABERNET F1

SUPER STAR F1

INTERMEDIATE DAY YELLOW

CANDY F1

85 Days. An onion for production in all areas of the U.S., Candy is mild and offers moderate storage when properly cured. The yellow globe-shaped bulbs can reach up to 6" in diameter with light brown skin, short sturdy tops, and tight necks. One of the most popular varieties for its versatility and ease of growing. ***00613***

EXPRESSION F1

105 Days. With mild flavor and large, globe shaped bulbs, Expression is an excellent variety for market sales and short term storage of up to 4 months. Attractive tan skins, light yellow flesh, and thin necks that dry down well. High resistance to Pink Root, and intermediate resistance to Fusarium Basal Rot. ***12979***

SEDONA F1 ORGANIC

109 Days. A very productive onion with tolerance to Thrips and Pink Root. Its strong root system helps this variety hold up well in hot summers. Skin of the 3-4" bulbs dries to a beautiful light tan. ***12404***

HARLAN F1

110 Days. Uniform large globe-shaped bulbs are firm with excellent internal quality and a high percentage of single centers. Suited to both fresh and processing markets, Harlan can reach jumbo and colossal sizes, has high scale quality, and stores short term. Intermediate resistance to Fusarium Basal Rot and Pink Root. ***13570***

INTERMEDIATE DAY RED

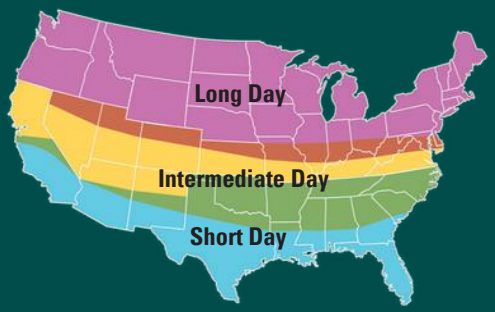

CABERNET F1

102 Days. An early onion by red standards, Cabernet produces uniform globe-shaped bulbs with single centers. An excellent internal ring color makes this vigorous grower great for both the fresh bulb and medium term storage markets. Skin of the 3-4" bulbs dry to a beautiful rosy red. ***12407***

INTERMEDIATE DAY WHITE

SUPER STAR F1

95 Days. This AAS Winner is a White Sweet Spanish type also known as Sierra Blanca. It performs well when planted in both the Northern and Southern U.S. Globe-shaped bulbs are about 4" in diameter with bright white skin and flesh. Best for fresh market and short term storage of up to 2 months. High resistance to Pink Root. ***00615***

Long Day

Most suitable for Northern states or latitudes of 37-47° and have long storage capabilities. Require 14-16 hours of daylength to begin to bulb.

Intermediate or Day Neutral

Most suitable for the mid states or latitudes of 32-42° and generally mature in 110 days if planted at the proper time. Require 12-14 hours of daylength to begin to bulb.

Short Day

Most suitable for Southern states or latitudes of 25-35° and generally mature in 110 days if planted during the winter or early spring time. Can be grown in the Northern states if planted late spring; bulbs will mature faster but will not reach full size. Require 10-12 hours of daylength to begin to bulb.

All-America Selections Winner · Grower Favorite · 2027 Introduction

BUNCHING

RED BARON ORGANIC

65 Days. Red Bunching. This diverse red onion is a beauty! Its 12-15" green top leaves are straight and uniform. The lower portion is red and several layers deep so color keeps even after cleaned. If plants are left in the field they will produce a 3-4" bulb perfect for fresh onion harvest. ***12403***

SOUTHPORT WHITE BUNCHING

65 Days. White Bunching. This customer favorite has clear white slightly bulbed stems with strong tops. Sow any time from very early spring to mid-summer, and harvest promptly when mature. Not recommended for wintering over. ***00619***

RED BUNCHING F1

68 Days. Red Bunching. A long day hybrid with a sweet and mild taste and attractive deep purple-red color that develops best in cool conditions. The medium-long shank and contrasting bright green leaves are striking in market displays. ***12197***

TOKYO LONG WHITE

68 Days. White Bunching. A slightly pungent non-bulbing Japanese bunching type onion that it is popular for its single stems with long white shanks. An improvement over Southport White Bunching with high resistance to Pink Root, Smut, Botrytis Leaf Blight, and Thrips. ***00611***

MARKSMAN

70 Days. This interspecific variety combines the non-bulbing qualities of *A. fistulosum* and the reduced pungency qualities of *A. cepa* for a high-quality bunching onion with excellent taste and bright white shanks that are easy to peel. Plants are upright with dark green foliage and a vigorous root system, suitable for spring, summer, and fall growing seasons. ***13428***

PARADE ORGANIC

70 Days. White Bunching. This very uniform white bunching onion produces 12-16" dark green top leaves that are straight and uniform. Very minimal bulbing will give you consistent yields. Intermediate resistance to Basal Rot and Pink Root. ***12402***

LIVE PLANTS *Spring Program*

SETS

ONION TRANSPLANTS

LONG DAY

AILSA CRAIG
95 Days or 14 Weeks. Yellow, globe shaped, sweet onion that can reach up to 8" and 6 pounds. This open pollinated variety is great on taste and size, but is not recommended for storage. ***11617***

BLUSH F1 *See description on page 91*
107 Days or 15 Weeks. ***13415***

RED ZEPPELIN ●
100-110 Days. A deep red, globe-shaped onion that produces 3-4" bulbs when grown from our transplants. A sweet, long day onion, this variety is a great option for growers in northern areas. When mature, inner rings turn a vibrant reddish purple throughout. Red Zeppelin stores for up to 8 months. ***11621***

SV4643NT* F1
112 Days or 15 Weeks. Early maturing main season red with vigorous tops, strong roots, and good interior color. Globe shape. Shows high resistance to fusarium wilt, intermediate resistance to pink root. ***13564***

WALLA-WALLA
90 Days or 13 Weeks. Yellow, semi-flat, very sweet open pollinated onion. Grown by many for its flavor and ease to grow due to its early maturity and cold hardiness. This long day variety also makes a great choice for areas requiring intermediate varieties due to its fast maturity. ***07105***

WHITE SWEET SPANISH *See description on page 91*
100 Days or 14-17 Weeks. ***13414***

YELLOW SWEET SPANISH *See description on page 91*
100 Days or 14-17 Weeks. ***13413***

INTERMEDIATE DAY

BRADLEY* F1
118 Days or 15-17 Weeks. Yellow, globe shaped, with thick, tight skins. Very uniform. Stores well. ***13563***

CANDY F1 *See description on page 92*
90-100 Days or 13-14 Weeks. ***13411***

EXPRESSION* F1 *See description on page 92*
105 Days or 15 Weeks. ***13562***

RED CANDY APPLE F1
85-95 Days or 12-14 Weeks. Deep red, 3" flattened globe shaped sweet onion. When planted in short- and interme- diate-day regions it produces larger bulbs. When planted in long day regions increase nitrogen applications to push to larger sizes. Stores up to 2 months. ***11620***

SUPER STAR F1 *See description on page 92*
95 Days or 14 Weeks. ***13412***

LONG DAY 3 BUNCH PLANT COLLECTION

One bunch each of Candy, Red Zeppelin and Superstar. (Approx. 180 plants)

06523 Long Day 3 Bunch $45.75

SHORT DAY 30 BUNCH PLANT COLLECTION

Consists of 10 bunches of each of 1015Y Texas Super Sweet, Texas Early White and Red Creole. Recommended for Southern growers. Combination of yellow, red and white onion transplants with short and long storage capabilities. (Approx. 1,800 plants)

12868 Short Day 30 Bunch $137.00

ONION TRANSPLANTS

LONG DAY 30 BUNCH PLANT COLLECTION

Consists of 10 bunches of each of Candy, Red Zeppelin and Super Star. Suitable for long day and intermediate day growers. Combination of yellow, red and white onion transplants with short and long storage capabilities. (Approx. 1,800 plants)

06445 Long Day 30 Bunch $147.00

ONION TRANSPLANT PRICING

Approximately 50-60 plants per bunch

Quantity	Price
2 bunches	$34.00
4 bunches	$62.00
30 bunches	$127.75
150 bunches	$620.00; $124/box
300 bunches	$1200.00; $120/box
600 bunches	$2300.00; $115/box

Prices are per variety.
Varieties cannot be mixed for volume discount.

Onion transplant shipments begin in January, from South to North, weather permitting. Ship weeks are assigned based on the historical best planting time for your area, as determined by our grower. If you would like a different ship week, please be sure to specify your desired ship week when placing your order. Waivers are required to ship earlier than your assigned ship week.

We do not ship onion transplants to Oregon, Idaho, Alaska, Hawaii or Puerto Rico.

** Onion Bradley, Expression and SV4643NT only available in 30 bunch sizes.*

RED

SWEET

WHITE

YELLOW

ONION SETS

51119 RED *Long Day*
Red Wethersfield types produce a medium sized bulb with strong flavor and excellent color. It stores well, can be used to grow green onions, and is great in salads. Long-day open pollinated type.

60126 SWEET *Day Neutral*
Sweet is an intermediate day hybrid variety much like the mild sweet yellow variety Candy, but stores better.

51116 WHITE *Long Day*
Ebenezer types produce a medium sized bulb with strong flavor. It is excellent for storing, can be used to grow green onions, and is great on hamburgers. Long-day open pollinated type.

07102 YELLOW *Long Day*
Stuttgarter types produce medium sized bulbs with a semi- flat shape and strong flavor. It is excellent for cooking and storing, and can be used to grow green onions. Long-day open pollinated type.

ONION SET PRICING

Approximately 100-130 sets per lb.

Onion set shipments begin in mid-March. Ship weeks are assigned based on the historical best planting time for your area, as determined by our grower. If you would like a different ship week, please be sure to specify your desired ship week when placing your order. Waivers are required to ship earlier than your assigned ship week. Onion sets are also available to ship during our Live Plants Fall Program. **We do not ship onion sets to Alaska, Hawaii, Idaho, Puerto Rico or Washington.**

All-America Selections Winner ● Grower Favorite ● 2027 Introduction

Pak Choi - see page 70.

PARSNIP

HARRIS MODEL

120 Days. A smooth, white, easy to clean parsnip, Harris Model develops very few rootlets and has a long, slim shape. The flesh is fine-grained and sweet with superior flavor. ***00640***

JAVELIN F1

110 Days. The most successful hybrid parsnip on the market, Javelin produces a slender wedge shaped root with shallow crowns. Suitable for sowing from December through May, offering potential for a nearly continuous harvest. Excellent canker resistance and field holding ability. ***12810***

PEAS

Culture: Peas can be planted as soon as you can work the ground in spring. Select a fertile well-drained loam with a pH of 6.0-6.8. Peas do not need to be trellised unless noted. In some climates, peas may also be sown in late summer to mature in the fall. **Days to maturity** listed are from direct seeding and for variety comparison only. **Avg. seeds/lb. = 2000.**

Pea Disease Codes

CW = Common Wilt
FW = Fusarium Wilt
FRR = Fusarium Root Rot
DM = Downy Mildew
PM = Powdery Mildew
PEV = Pea Enation Virus
PLRV = Pea Leaf Roll Virus
BYMV = Bean Yellow Mosaic Virus
PSbMV = Pea Seed Borne Mosaic Virus
Aps = Ascochyta Leaf and Pod Spot
Aph = Aphanomyces Root Rot

STANDARD (ENGLISH) PEAS

KARINA ORGANIC

50 Days. This dwarf 24-30" high pea is an early maturing variety, with 4-6" pods that offer 6-8 sweet juicy peas when shelled. Good heat tolerance. Great for containers. ***12551***

PLS 534 SHORT STORY

58 Days. A second-early afila variety with double pods that fill well with 8-9 high quality peas each. Vines reach 20-22" tall and have high resistance to FW (races 1,2) and FRR. ***12784***

KNIGHT

62 Days. Knight's broad 3½ -4" long pods stand up well to handling and yield 6-8 peas each. This compact 20-24" type needs no trellis. High resistance to CW, PM, PEV and BYMV. ***00166***

LITTLE MARVEL

63 Days. These prolific 18-20" vines offer dependable, early yields. Abundant 3" blunt-tipped pods are well-filled with 5-6 plump peas of exceptional sweetness and flavor. Little Marvel does not need trellising. ***00170***

FROSTY

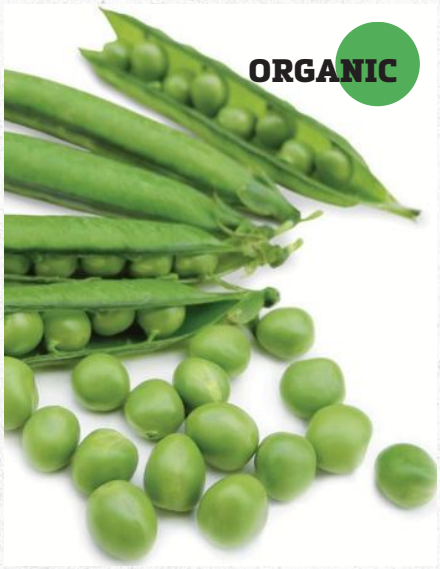

64 Days. This dependable variety offers tender delicious peas of excellent quality for freezing. Dark green 3½" pods yield 6-8 peas and are borne near the top of 26-30" vines for easy picking. Frosty does not require trellising. High resisitance to FW. ***00158***

PEA - NORLI ORGANIC

PEA - LINCOLN

PEA - AVALANCHE

PEA - GREEN ARROW

PEA - OREGON SUGAR POD #2

STANDARD (ENGLISH) PEAS

PLS 167

64 Days. A top-yielding shelling pea for the mid-season slot with a leading disease resistance package that includes field resistance to Powdery Mildew. PLS 167 has an afila plant type that does not need trellising and sets an average of 2-3 pods per node. High resistance to FW and PM, intermediate resistance to Aph, Aps, and tolerance to PSbMV. ***13573***

PLS 566

64 Days. Exceptional yields can be expected from this mid-season afila pea. Long light green pods are set two per node on blue-green plants that reach 22-24" tall. Plants have drought tolerance, high resistance to FW and PM, intermediate resistance to DM, and set an impressive 10-12 peas per pod. ***12785***

LINCOLN

67 Days. Lincoln's medium-sized 3-3½" pods are slender, curved, pointed, and filled with 8-10 peas. These small tender peas are still the standard of quality in the trade. The 28-30" vines do not need trellising and have high resistance to CW. ***00168***

GREEN ARROW

70 Days. This very heavy yielder bears slim straight pods packed with 9-11 small deep green peas. Green Arrow is suitable for fresh market or freezing, and efficient 24-28" vines do not need trellising. ***00162***

PLS 595

72 Days. Tall upright afila plants (28-32") set pods high for easy harvest. Two pods are produced per node, each filled with an average of 11 delicious peas. Indeterminate flowering provides continuous pod set. Plants have high resistance to FW (race 1) and intermediate resistance to PM. ***12728***

SNOW PEAS

NORLI ORGANIC

48 Days. Compact plants produce stringless 2½" tender snow peas. Eat fresh right off the plant. Use for salads or sautéed. Great for containers. ***12552***

AVALANCHE

60 Days. An afila-type snow pea with exceptional yields of beautiful dark green pods set on strong 30" plants. Very sweet pods are set doubly and reach an average length of 5¼". Plants have high resistance to FW (race 1) and PM. ***12786***

OREGON SUGAR POD #2

65 Days. This early snow pea produces continuous yields of broad flat stringless edible pods that are delicious steamed or fresh. Its 24-28" vines are easy to grow without trellising and have high resistance to CW, PM, and PEV. Released by Oregon State University. ***00153***

All-America Selections Winner Grower Favorite 2027 Introduction

SNAP PEAS

SS 141 SUGAR SNAP ORGANIC

55 Days. A vigorous, widely adapted variety that is good for early or late season production. Cooler temperatures will produce a sweeter flavor. Jumbo pods are plump with outstanding flavor. Plants grow to 35" tall. ***12727***

SUGAR SPRINT

62 Days. Sugar Sprint produces excellent early yields of edible stringless pods that are very sweet and tender. The compact 26" vine has intermediate resistance to PEV and PM, averages two pods per node, and lends itself well to either ground or short stake production. The 3" pods can be enjoyed fresh off the vine, steamed, or used in stir-fry. (P.V.P.) ***00195***

SUPER SUGAR SNAP

66 Days. This improvement to the original Sugar Snap offers earlier maturity, high resistance to PM, and intermediate resistance to PLRV. Harvest the fleshy tender 3" dark green pods when they're full of sweet peas, and enjoy them raw, lightly steamed, or stir fried. Super Sugar Snap's tall 4-5' vines need support. ***00189***

CASCADIA

68 Days. Productive standard vines reach 24-28" tall and set 1-2 pods per node, even under stressful conditions. The 3½" pods are deep green, thick, and very sweet, juicy, and flavorful. High resistance to FW (races 1,2), PEV, PM, and intermediate resistance to Bean Leaf Roll. ***11183***

COWPEAS

Culture: Cowpeas can be grown much like beans, see culture on page 10. Pods set high on the plant and can be harvested early for fresh eating, or allow pods to reach full maturity and dry on the plant prior to harvesting. Pods can then be picked and shelled for an abundance of nutritious dried cowpeas, perfect for use in soups and other recipes. Allow cowpeas to dry completely prior to storing to prevent the growth of mold in storage. A unique offering for late summer and fall market sales.

CORONET

62 Days. An heirloom cowpea variety that sets strong yields of deep purple colored pods on compact 24" plants, Coronet is an improved Pinkeye Purple Hull type. Attractive purple pods are filled with traditional cowpeas that are excellent for eating fresh or dried. Seeds are cream colored with a purple-pink spot at the hilum, or 'eye'. ***12788***

PHENOMENAL

65 Days. A showy variety that sets long yellow pods with red stems on bright green plants that reach 24" tall. Pods hold an average of 12 peas each, which are higher in amino acids and anti-oxidants than many other cowpea varieties. Seeds are cream colored and spotted with black and dark brown coloration. ***12787***

PEPPERS

SAILFISH F1

SPRINTER F1 ORGANIC

ALLIANCE F1

DECLARATION F1

CAPTAIN F1

KING ARTHUR F1

REVOLUTION F1

Culture: Peppers are a warm weather, long season species that is usually transplanted to the field 2-3 weeks after the last threat of frost. Seeds germinate best at 78-85°F. soil temperature. Consider building your own germination chamber to increase germination rates and consistency. Grow time is approx. 6 weeks at that temperature in a greenhouse, followed by a few days at 60-65°F. for hardening off before field setting. Peppers prefer a sandy loam soil of average fertility and pH of 6.0-6.8. Black plastic mulch and drip irrigation are beneficial for maintaining soil temperatures and moisture levels as well as for controlling weeds. **Days to maturity** are from transplanting and are for variety comparison only. **Avg. seeds/lb. = 70,000.**

Special Note: This section has been ordered by *Days to Maturity* for your convenience. To view offering alphabetically, see page 103.

BELL PEPPERS (GREEN TO RED)

SAILFISH F1

65 Days. An early blocky bell pepper that is high-quality and quick to mature from medium green to a beautiful dark red color in open field production. The uniform healthy plants hold fruit high off the ground and carry high resistance to Tobamovirus, and intermediate resistance to BLS (races 0-10) and Phytophthora. ***13195***

SPRINTER F1 ORGANIC

65 Days. Just as the name implies, this green to red variety will get you to market early with 3-4 lobed, medium sized fruits. The ample plants protect against sunscald, and exhibit tolerance to blossom end rot and silvering. Grow in open field or protected culture. High resistance to ToMV (races 0-3). ***11204***

ALLIANCE F1

70 Days. Alliance's strong disease package ensures great yields with high resistance to BLS (races 1, 2, 3, 5), TMV, PMV, PYMV and PVY, and intermediate resistance to CMV. The blocky, large to extra-large fruit have thick walls and are produced on strong plants that are easy to harvest. ***01671***

DECLARATION F1

70 Days. Exceptional pack-outs of large smooth fruit on vigorous tall plants that provide excellent leaf coverage and continuous set. Expect high yields of shiny dark green fruit that are mostly four lobed. An excellent disease package includes high resistance to BLS (races 1, 2, 3, 5), and intermediate resistance to Phytophthora, TSWV, and CMV. ***11673***

CAPTAIN F1

72 Days. Captain is well-suited to open field conditions, offering intermediate resistance to BLS (races 1-10) and Phytophthora. With an open plant architecture and slightly extended crown set, the blocky dark green fruit reach XL and Jumbo sizes while keeping consistent shape. ***13032***

KING ARTHUR F1

72 Days. By combining high yield and virus resistance, King Arthur performs like few other varieties can. The large blocky peppers are sweet, thick-walled, and ripen from green to bright red. The upright, multi-virus resistant plants set well in heat and provide excellent cover for its heavy yields. ***00646***

REVOLUTION F1

72 Days. Medium tall plants produce good yields of large to extra-large blocky fruit with a high resistance to BLS (races 1, 2, 3, 5) and intermediate resistance to Phytophthora and CMV. The medium-green to red maturing fruit have good wall thickness and a four lobed shape. Revolution has been noted to have early maturity, concentrated set, and strong yields, even during cool growing periods. ***01667***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture · Available as Plug & Liner

Excellent Placepack Variety

CURRIER F1

73 Days. Currier produces early yields on compact plants that offer good cover to the fruit. Its large to extra-large, mostly four lobed fruit are placepack size and ripen to a rich red color. High resistance to BLS (races 1, 2, 3), TMV, PMV, PYMV and PVY (races 0, 1, 1-2) and intermediate resistance to Phytophthora and CMV. ***11261***

PS09941819 F1

73 Days. This blocky green to red maturing bell pepper offers high resistance to BLS (races 1-5) and Tobamovirus, and intermediate resistance to Phytophthora. It produces a continuous set of large to extra-large, 3-4 lobed, anthocyaninless fruit on medium large plants with good foliage cover. PS09941819 has also shown good field tolerance to silvering on the fruit, and harvests often continue until frost in the Northeast. ***11459***

TARPON F1

73 Days. With intermediate resistance to BLS (races 0-10) and Phytophthora, and a more refined fruit shape than Turnpike, Tarpon is a sure performer for the Northeast and Midwest. Smooth blocky dark green fruit are produced in a concentrated set on compact plants. High resistance to TMV. ***12940***

Extra-large and jumbo, blocky bell

VANGUARD F1

73 Days. Vanguard offers intermediate resistance to Phytophthora, a continuous set, and excellent foliage cover from its tall plants. Its blocky, mostly four lobed fruit are medium to dark green, free from silvering, and grade out to extra-large and jumbo sizes. High resistance to BLS (races 1-5) and intermediate resistance to Phytophthora and CMV. U.S. Patent Pending. ***11672***

KARISMA F1

75 Days. Karisma offers excellent disease protection, high yield potential, and an extended harvest. High resistance to TMV, PVY (0, 1, 1-2), and intermediate resistance to BLS (races 1, 2, 3), PMV, PYMV and CMV. Large fruit have thick walls, an attractive glossy green color, and smooth appearance. Fruit are produced on strong plants with good foliage cover. ***11663***

TURNPIKE F1

75 Days. Turnpike is a beautiful blocky bell pepper that offers high resistance to BLS (races 0-5, 7-9), TMV, and intermediate resistance to Phytophthora. Its thick-walled fruit are anthocyaninless, ripen from deep green to red and measure 4½"W x 4¾"L. The 22-26" plants have a concentrated set and offer good protection to the fruit. ***12198***

REDFISH F1

76 Days. A high quality large blocky bell with thick walls, Redfish has good vigor and offers intermediate resistance to Phytophthora and high resistance to BLS (races 0-10). This early to mature variety is well adapted to the early green or red market. A strong, vigorous plant provides good foliage cover to maturing fruit. ***13927***

KING OF THE NORTH ORGANIC

ARISTOTLE F1

LADY BELL F1

JUPITER

CALWONDER

PURPLE BEAUTY

BEDDING PLANT GROWER FAVORITES

NEW ACE F1

65 Days. New Ace is one of the earliest to mature and has been a consistent yielder, even when others do not set fruit because of hot weather. Its 3-4 lobed fruit have medium thick walls that are sweet and tender. Suitable for greenhouse and open field production. ***01648***

EARLY SUNSATION F1

70 Days. A great early pepper, Early Sunsation produces large smooth fruit that mature from dark green to bright golden-yellow at full maturity. The blocky fruit have thick walls and a very sweet taste when allowed to ripen to yellow. Intermediate resistance to BLS (0-3,7,8) adds to the appeal of this early beauty. ***00664***

KING OF THE NORTH ORGANIC

70 Days. A reliable sweet bell pepper for growers with limited growing days. Sturdy plants produce early heavy yields of blocky, thick walled, 3-4 lobed fruit. Crisp sweet flesh is delicious for fresh salads or cooking. ***12411***

LADY BELL F1

71 Days. This hybrid has been a consistent performer in the Northeast. The rich green fruit that ripen to red have a uniform deep bell shape with 3-4 lobes and medium-thick walls. It is popular for bedding plant sales as well as fresh market use. ***00673***

CALWONDER

72 Days. A standard for open-pollinated bell pep pers, Calwonder may not yield like a hybrid, but its fruit are thick-fleshed, dark green, and blocky. Calwonder is best suited for areas with warm nights and a long growing season. A popular bedding plant item. ***00656***

RED KNIGHT F1

72 Days. Throughout the Northeast and Midwest, growers report good yields of large thick-walled fruit from Red Knight. Maturing in the mid-early slot are high quality blocky bell fruit that measure 4½"W x 4½"L. Shiny attractive fruit ripen from dark green to an intense red color. The strong upright plants have intermediate resistance to BLS (races 0-3, 7, 8) and PVY. ***00675***

SKYHAWK F1

72 Days. This extra-large high-yielding pepper offers intermediate resistance to BLS (races 1-10). The thick walls and uniform blocky shape of the fruit lends itself well to boxing. Strong plants offer good protection for a concentrated set of attractive green fruit. ***12609***

ARISTOTLE F1

73 Days. A widely adaptable variety, Aristotle has impressed growers across the country with its extra-large fruit and tremendous yield potential. This widely used green to red bell offers thick walls and a blocky shape. Aristotle's vigorous 20-24" plants offer good protection to the fruit and have intermediate resistance to BLS (races 0-3,7,8), TMV and PVY. The plants are also free of anthocyanins, which minimizes purpling on the fruit during periods of stress. ***01673***

JUPITER

75 Days. Known for its jumbo size, this 4-lobed open pollinated sweet pepper ripens green to red and has nice thick walls that stand up to stuffing or freezing. High resistance to TMV. ***00653***

PURPLE BEAUTY

75 Days. This productive open-pollinated variety yields an abundance of sweet deep purple 3"W x 3"L blocky fruit. Mature color is a deep red that develops very late. Purple Beauty's unusually bright color makes a nice addition to farmers' market displays, home gardens, and fresh summer salads! ***00662***

BELL PEPPERS (COLORED)

DRAGONFLY F1

55 Days. Blocky fruit have a beautiful deep purple color that holds well in the field for an extended period before ripening to red. The elongated 3" fruit are thick walled, sweet and flavorful with green internal color. Productive in a range of conditions with high resistance to TMV and ToMV (races 0-2). ***13117***

DRAGONFLY F1

FLAMINGO F1

66 Days. Prolific plants are resistant to TMV and the smooth fruit are 3½"W x 3½"L and slightly tapered, turning from ivory yellow to orange red. Flamingo is a beautiful, sweet salad pepper with bright colors, and sought after for Eastern European ethnic markets. ***00677***

FLAMINGO F1

SILVERADO F1

70 Days. A high yielding, slightly tapered bell that ripens cream to red. Silverado has sweet, thick walls and a vigorous plant that produces high yields of uniform fruit. Popular in some Eastern European ethnic markets, Silverado is great option for growers looking for a flavorful, colored bell. ***13933***

SILVERADO F1

VALAHIA F1

70 Days. Valahia is a blocky ivory-yellow bell pepper with excellent quality and sweet flavor. The thick-walled fruit measure 3"W x 3¾"L and ripen to red. Vigorous plants are high-yielding and perform well in open field and protected culture. Intermediate resistance to TSWV. ***13429***

VALAHIA F1

YELLOWFIN F1

70 Days. Yellowfin is an early to mature, green to yellow bell pepper that produces smooth, uniform fruits that turn a bright canary yellow when mature. This variety produces sweet blocky bells with nice, thick walls and offers high yield potential with intermediate resistance to Phytophthora and high resistance to BLS (races 0-10) and TMV (races 0-3). ***13480***

YELLOWFIN F1

DELIRIO F1

73 Days. A beautiful dark orange blocky bell pepper suited to open-field production. The strong plants have an open architecture allowing for consistent fruit shape and easier harvest. High resistance to Tobamovirus (race 0-3) and intermediate resistance to TSWV (race 0). ***13164***

DELIRIO F1

SVPB8500 F1

75 Days. An extra-large orange bell pepper for open-field production, with BLS resistance. SVPB8500 has a semi-concentrated set of uniform, high-quality fruit that are smooth, bright orange, and thick-walled. High resistance to Tobamovirus and intermediate resistance to BLS (races 0-10). ***14068***

SVPB8500 F1

MILENA F1 ORGANIC

75 Days. High quality 3-4 lobed medium sized fruit are set in strong yields on vigorous open plants. Suitable for both open field and protected culture. High resistance to PMV (races 0-3), PVY (races 0-1), and intermediate resistance to TSWV and TEV. ***12413***

MILENA F1 ORGANIC

ABAY F1 ORGANIC

95 Days. With strong field performance, Abay makes a beautiful dark green bell and an even more striking mature yellow. Extra-large 4" fruit are thick walled and sweet. High resistance to BLS (races 1-5) and Tobamoviruses. ***12953***

BELL PEPPERS (SPECIALTY)

PRISM F1 *Blocky mini bell*

65 Days. This unique mini bell pepper ripens gradually from light green to yellow-orange and finally dark red, allowing growers to harvest all colors from one plant as the fruit mature. An easy way to grow a mix of colored peppers without multiple varieties. Fruit measure 2¼"W x 2½"L. Plants perform well in-ground and in containers and offer high resistance to BLS (races 0-3,7,8). ***13261***

ORANGE BLAZE F1 *Elongated mini bell*

68 Days. Orange Blaze is a green to orange maturing mini bell pepper ideal for sales at roadside or farmers' markets. Sturdy short plants produce good yields of fruit that measure 1½"W x 3"L and have 2-3 lobes. In trials throughout the U.S., Orange Blaze has proven to be very adaptable. High resistance to BLS (races 0-3,7,8) and TMV. ***11559***

SNACKABELLE RED F1 *Blocky mini bell*

75 Days. This mini bell packs some serious flavor. Measuring 2¼"W x 2¼"L and ripening from green to deep red, its firm thick walls and blocky shape make it great for packing, and versatile for cooking, grilling, stuffing, and snacking. Compact plants have high resistance to BLS (races 1-3, 7, 8) and TMV and grow well in-ground or in containers. ***12618***

MINI BELL RED ORGANIC

90 Days. Great Ohio family heirloom from Lucina Cress. Plants are loaded with 2" fruits that ripen from green to red. Versatile for use in many different culinary forms, including salads, pickled, or stuffed. ***12497***

STOCKY RED ROASTER ORGANIC

ARUBA F1

JIMMY NARDELLO'S ORGANIC

SPECIALTY SWEET PEPPERS

BANANA PEPPERS

SWEET BANANA
70 Days. Long pointed light yellow fruit are about 6" long and mature to bright red. Although the long fruit resemble a hot pepper, the flesh is sweet and is a perfect choice for frying and pickling. Yields can reach 25-30 fruit per plant. ***00678***

SWEET SUNSET F1
BLS protection
85 Days. A hybrid sweet banana pepper that is vigorous, disease resistant, and sets high yields on upright compact plants. The thick- walled sweet tapered fruit ripen from light green to red. A regional (Southeast, Heartland, West, Northwest) All-America Selections Winner. High resistance to BLS (0-3, 7, 8). ***12491***

CUBANELLE

CUBANELLE
60 Days. The standard open-pollinated frying pepper. Fruit are 7" long and have a slight taper from 2½" shoulders to a rounded end and are somewhat creased into 3 lobes. They ripen from yellow-green to orange-red and have fairly thin walls for quick cooking. ***00657***

ARUBA F1
64 Days. An early maturing hybrid Cubanelle, Aruba delivers excellent yields of marketable fruit even when other varieties fail to make size. Aruba's erect vigorous plants produce a highly uniform crop of elongated 3-4 lobed fruit that have thin walls and measure 2½"W x 7½"L. Ripens from a pale lime green to bright red. ***00683***

EXUMA F1
65 Days. Exuma is an early to mature, hybrid Cubanelle that offers growers a continuous, heavy set with a strong disease package. Fruits measure roughly 6 x 2½", are a medium green and produce elongated 2-3 lobe fruit on an upright, vigorous plant. Intermediate resistance to BLS (races 0-10). ***13703***

KEY LARGO F1
66 Days. Heavy yields of fruit turn from pale-green to bright orange- red with this popular hybrid Cubanelle. The thin-fleshed sweet frying peppers are 2-2½"W x 6-7"L, tapering to a blunt tip. Its medium-large plant provides good foliage cover for the fruit. ***00660***

ITALIAN ROASTING PEPPERS

STOCKY RED ROASTER ORGANIC
75 Days. An OSSI Pledged variety created by Frank Morton. Rivaling the production and uniformity of hybrids, with the amazing sweet flesh and flavor of an heirloom. ***12726***

JIMMY NARDELLO'S ORGANIC
95 Days. Italian heirloom brought to America in the 1880s by the Nardello family from the Basilicata region. Super sweet and flavorful with medium thick flesh. Excellent sliced raw or sautéed. Extremely versatile, freezes and dries well. Productive 24" plants are loaded with heavy sets of 10-12" long peppers. ***12574***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture · Available as Plug & Liner

LONG HORN

GIANT MARCONI F1

63 Days. This AAS Winner produces long tapered fruit that are ideal for the Italian fryer type market. Giant Marconi has a wonderful sweet taste when it matures to red. The 3"W x 8"L fruit mature early, and are great for roasting or grilling. ***01658***

CARMEN F1

75 Days. Producing heavy yields of wide-shouldered fruit that taper to a smooth point, this Italian sweet pepper is dependable. The sturdy plants grow 28" tall and offer good protection to the fruit, which measure 2"W x 7"L. Carmen matures from green to brilliant red and has a very sweet flavor at full maturity. Suitable for protected and open field growing. ***11661***

ESCAMILLO F1

75 Days. A golden-yellow Italian frying pepper to complement Carmen, with the same wide-shouldered tapered shape and exceptional sweetness. Fruits average 2½"W x 7"L and are set early on compact tidy plants. Escamillo's heavy yield and superior fruit quality made it an AAS Winner. ***14069***

CORTES F1

Phytophthora protection

77 Days. Cortes produces excellent yields of green fruit that ripen to red and measure 2½"W x 6"L. It carries a great disease package that includes intermediate resistance to Phytophthora. Cortes has shown to be very adaptable to all pepper growing areas and has performed well in both open field and protected culture plantings. High resistance to TMV, PMV, PYMV, and PVY (races 0,1,1.2). ***11678***

MARCATO F1

77 Days. This high quality long horn type is a must for growers offering specialty sweet peppers at roadside stands or farmers' markets. Marcato's strong plants produce high yields of tapered fruit that measure 2½"W x 7"L. The beautiful fruit have good flesh thickness, ripen from green to brilliant red, and have very sweet flavor at full maturity. High resistance to TMV, PMV (races 1-2), and PVY (races 0,1). ***11669***

SWEET SNACKING PEPPERS

CANDY CANE RED F1

65 Days. Variegated foliage and fruit that ripen from green-striped to solid red make this pepper especially eye-catching. The medium plants grow well in-ground or in containers and produce high yields of cone shaped fruit that are 1¾"W x 3¾"L. Sweet flavor, thin walls, and crisp texture make this pepper perfect for fresh eating at any stage of ripeness. ***23432***

PEPPER SERIES

TAPERED SNACKING PEPPER SERIES

65-68 Days. Very sweet miniature peppers available in three separate colors. Fruit have thin crunchy walls, measure 1¼"W x 3"L and taper to a blunt point. The vigorous plants produce excellent yields of sweet high quality fruit. The three colors combine perfectly for mixed basket sales.

SWEETY F1 ripen green to glossy red; high resistance to TMV, ToMV, and PVY (race 0,1). ***11050***

DARLING F1 ripen green to deep orange. ***12610***

SUGAR F1 ripen green to bright yellow; high resistance to TMV, ToMV, and PVY (race 0). ***12611***

HUNGARIAN CHEESE PEPPER SERIES

70 Days. These early maturing Hungarian cheese peppers come in three separate colors. Medium height plants produce continuous sets of flattened round, 2½-3"W x 1½"H fruit that are smooth and thick walled. Ideal for stuffing or pickling. Sell in mixed baskets to make a striking display at your farm stand or farmers' markets.

RIGHT ON RED F1 matures from dark green to deep red. ***11444***

ORANGE YOU SWEET F1 matures from dark green to deep orange. ***11446***

YES TO YELLOW F1 matures from dark green to deep yellow. ***11445***

SWEET SNACKING PEPPERS (CONT.)

HAMIK F1

73 Days. When harvested at the mature orange stage, this mini pep- per has exceptional sweetness. Nearly seedles fruit ripen from light green to a brilliant orange and are produced on compact sturdy plants. Hamik's cone-shaped fruit measure 1¼"W x 2½"L and have crisp juicy flesh. ***11922***

MAD HATTER F1

75 Days. Commonly used in Bolivian and Peruvian cuisine, these unique disc-shaped peppers have a refreshing citrus floral flavor that intensifies and sweetens as it matures. Heat is occasionally expressed near the seeds, but fruit wings are always sweet. Plants perform best when planted in ground. ***12490***

PEPPER SERIES

SWEETIE PEPPER SERIES

75 Days. Compact plants set strong yields of blocky to slightly tapered sweet snacking peppers, available in three separate colors. The small fruit are sweet and slightly fruity, measuring 1"W x 2½"L.

RED SWEETIE F1 matures from dark green to deep red. ***13430***

ORANGE SWEETIE F1 matures from dark green to deep orange. ***13431***

YELLOW SWEETIE F1 matures from dark green to deep golden yellow. ***13432***

HOT PEPPERS

CAYENNE PEPPERS

CAYENNETTA F1

69 Days. This All-America Selections winner is the ideal hot pepper to use for container production. Its compact, upright plant produces great numbers of dark green fruit that ripen to a brilliant red at full maturity. Cayennetta's spicy, tapered fruit measure 3 to 4" long and its plant has dense foliage cover that is dark green. ***11096***

CAYENNE LARGE THICK

75 Days. These large Cayenne peppers are hot and turn fiery red at maturity. They are easily dried and work well in hot sauces. The long tapered fruit have medium to thick walls and ripen from green to red. The open plant allows for easy harvest of the ¾"W x 7"L fruit. ***00685***

CAYENNE LONG SLIM

75 Days. A dependable producer for years, tall bushy plants produce heavy yields of long slim wrinkled fruit (½"W x 5"L) that are very hot. The fruit are thin walled and ripen from green to a fiery red. Use for hot sauces, drying, decoration, and dehydration. ***01668***

GOLDEN CAYENNE F1

87 Days. Compact plants produce an abundance of slender golden peppers that reach 3½-4" long. Well suited for field production or containers. Fruit mature from green to golden yellow, and increase in heat as they ripen. Excellent for cooking, fresh eating in salsas, or dried and ground into a unique golden powder. ***12848***

MESILLA F1 *Strong disease resistance*

87 Days. Mesilla is a hybrid Cayenne, producing 1½"W x 9"L fruit that taper to a point. The fruit ripen from green to brilliant red and are wrinkled at the stem end. Large upright plants offer good cover to the fruit and are very productive throughout the whole growing season. Its thin-walled fruit can also be used for drying or making hot pepper sauces. Intermediate resistance to TMV and PVY. ***11192***

HABANERO PEPPERS

CHAAK F1

80 Days. A vigorous habanero that is earlier to ripen and higher yielding than other habanero varieties. The large, thick-walled fruit ripen from green to orange, resist cracking, and have good shelf life. Intermediate resistance to TSWV. ***13180***

ORANGE HABANERO

90 Days. Productive plants support large numbers of thin-fleshed, wrinkled fruit that turn from light green to golden orange at maturity. These peppers are approximately 1½"W x 2"L and are used both fresh or dried. The citrus flavors are great for hot sauces. ***00665***

RED HABANERO

95 Days. One of the hottest habanero types, Red Habanero ripens to a brilliant red. The fruit measure 1¼"W x 1½"L, are thin-walled, and set in great numbers on 14-18" plants. Complex flavors with citrus undertones. ***11194***

EARLY JALAPENO ORGANIC

FELICITY F1

MEGATRON F1

JALAPENO M

BLACK MAGIC F1 ORGANIC

EVERMAN F1

DANTE F1

BAMBINO F1

JALAPENO PEPPERS

EARLY JALAPENO ORGANIC
65 Days. This early maturing variety ensures you're the first with jalapenos on your stand. Prolific yields of flavorful, blunt fruits that measure 2-2½" long. Compact plants are sturdy and work well in containers. Moderately spicy fruits with thick walls are normally harvested when dark green, but can also be used when red. ***00059***

MEGATRON F1
65 Days. Megatron is a very early, extra-large jalapeno with thick walls and deep green color. The smooth cylindrical fruit are 4½" long, ripen from green to red, and have good shelf life. Strong compact plants offer high yield potential and high resistance to Tobamovirus and BLS (0-3,7,8). ***13176***

BLACK MAGIC F1 ORGANIC
70 Days. The fruit of this unique variety are very shiny and such a dark green they appear nearly black. The striking 4" long fruit are very uniform, thick-walled, and high quality. Plants perform well in open-field or protected culture and carry intermediate resistance to BLS (1-3). ***13257***

DANTE F1
70 Days. Vigorous plants produce early, concentrated set of extra-large (1¾"W x 4¼"L), deep green fruit. Dante has a higher Scoville rating than most jalapenos (3500-4000 units), and some cracking can be present. A top performer in a range of environments, Dante is highly resistant to BLS (1-3), TMV, and ToMV. ***12607***

FELICITY F1 *Low-heat jalapeno*
70 Days. Offering jalapeno flavor with very mild heat, thick walled fruit average 4-5" long. Continuous fruit set guarantees high yields of green to red maturing peppers. ***12772***

JALAPENO M
70 Days. A thick-walled jalapeno with fiery hot pungency, this uniform strain does well in Northern plantings. Upright plants produce heavy yields of 1½"W x 3½"L slightly tapered, cylindrical fruit that are very smooth and mature from deep green to red. ***00655***

EVERMAN F1
75 Days. Everman is an extra large (1¾"W x 4"L), thick walled jalapeno with excellent weight and shelf life. Its attractive fruit are a shiny deep green with almost no cracking. Vigorous plants have continuous set and high resistance to BLS (1-3). A great choice for fresh market sales. ***12608***

BAMBINO F1
85 Days. The perfect jalapeno for bite-sized jalapeno poppers! Bambino has a strong upright plant with exceptional yields of uniform medium-sized fruit that are blocky and thick walled. Suitable for both the processing and fresh markets. Intermediate resistance to BLS (1-3). ***12849***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture · Available as Plug & Liner

POBLANO/ANCHO PEPPERS

BASTAN F1 ORGANIC

65 Days. A fabulous poblano that matures early with just the right amount of heat. Large plants produce heavy yields of very dark green, thick walled fruits that are 5-6"L x 2½-3"W. Smooth skins make preparing chiles rellenos or roasted peppers easy, and the rich dark chocolate color at full maturity is great for mole sauce. ***12417***

SEQUOIA F1

72 Days. Tall upright plants produce very good yields of large dark green fruit that measure 2¾"W x 6¾"L. Sequoia has a classic tapered Ancho shape and is mainly 2 lobed. The fruit have a mild to hot pungency, are very uniform in size and shape, and ripen to deep red very late. ***11210***

TRIDENT F1

80 Days. Trident is an adaptable, high yielding Ancho pepper that produces extra-large fruits, 3½"W x 6½-7"L. Fruit are tapering, firm, and somewhat flattened. Trident ripens from dark green to red and fruit maintain size and quality across multiple harvests. High resistance to TMV. ***12622***

SPECIALTY HOT PEPPERS

HUNGARIAN WAX

60 Days. This early, highly prolific hot pepper bears bright waxy yellow fruit that turn orange-red when ripe. Fruit are 1½"W x 5-6"L and are popular for canning, pickling, frying, and stuffing. A widely adapted and productive strain, even in short seasons. ***00672***

INFERNO F1

60 Days. Hungarian Wax/Hot Banana. Upright vigorous plants have a concentrated set of bright yellow fruit that ripen to red. The fruit are smooth, thick-walled, and tapered, measuring an average 1½"W x 7¾"L. Excellent for fresh market and for pickling, Inferno has approximately 900 Scoville units. ***13419***

KATANA F1

60 Days. Shishito. Vigorous plants produce a prolific set of medium green peppers with a blunt tip, crisp walls and delicious flavor. One in every ten peppers may have a little heat. Katana carries high resistance to BLS (races 1-3) and PVY and can be used in open field or protected culture production. ***13934***

TAKARA F1

60 Days. Shishito. A shishito pepper that produces small 1"W x 3"L fruit with a mild but rich flavor. One in every ten peppers may have a little heat. Compact plants are well-branched and have high yield potential. Ripens green to red, but is best harvested green. ***12480***

TIME BOMB F1

65 Days. Hot Cherry. Hybrid plants set high yields of hot red cherry peppers that mature from green to red. The 1½"W x 1½"L fruit have a light heat and smoky flavor that is great for pickling and salsas. High resistance to Tobamovirus (race 0). ***12941***

TRAPIO F1

65 Days. Serrano. Vigorous plants set strong yields of this large, high quality serrano. Fruit have thick walls, good pungency, and excellent shelf-life. Plants are well-adapted to different growing environments, recover well between harvests, and carry intermediate resistance to BLS (1-3). ***12990***

SCORPIO F1

70 Days. Hot Banana. Vigorous plants set strong yields of 7-8" straight peppers with bright yellow-green color and low anthocyanins. Intermediate resistance to BLS. ***13131***

DEL RIO F1

BIG JIM HERITAGE

LARGE RED CHERRY HOT

MARIACHI F1

SPECIALTY HOT PEPPERS (CONT)

HOT PORTUGAL

70 Days. An original Joseph Harris Co. introduction, Hot Portugal is popular for its vigorous upright plants that support large numbers of very hot peppers. The fruit average 1½"W x 6-7"L, tapering to a point. They are a wrinkled dark green, ripening quite early to a brilliant glossy scarlet. ***00670***

PATHFINDER F1

70 Days. Serrano. This well-adapted variety has excellent plant cover protecting 4½-5" dark green fruit. Pathfinder is early maturing but maintains its size and quality for the duration of the season, with thick walls and dark green peduncles that hold up for a long shelf-life. High resistance to BLS (races 0-3,7,8) and Tobamovirus, and intermediate resistance to Phytophthora and Root Knot Nematode. ***13585***

CHILE G76 F1

72 Days. Anaheim. Chile G76 produces medium-thick fleshed fruit that have mild heat and a rich satisfying chile flavor. Its uniform 2"W x 8"L fruit ripen from bright green to red, but Anaheims are typically sold and eaten when green. Compact plant habit with high resistance to TMV. ***11653***

DEL RIO F1

72 Days. Anaheim. Vigorous, adaptable plants set high yields of smooth, flat, 7" long Anaheim peppers. The fruit are high quality with a medium green color and a tapered two-lobed shape. ***13580***

BIG JIM HERITAGE

75 Days. A traditional "Hatch" chile pepper, Big Jim sets heavy yields of large green peppers with medium heat (500-3,000 Scoville units). The peppers are most commonly picked green for roasting, but they will ripen to red. Fruit can reach an impressive length of up to 12", so plants may require some support. ***10715***

LARGE RED CHERRY HOT

75 Days. Hot Cherry. Smooth, dark green fruit that mature to cherry red are produced in large numbers. Fruits are oblate with medium wall thickness, measure 1½"W x 2"L, and are medium hot with a slightly sweet taste. Best eaten when red for fullest flavor, and excellent for pickling. ***00674***

MARIACHI F1

85 Days. Santa Fe Grande. The perfect hot pepper for those who enjoy the taste of hot peppers but dislike the heat. Its heavy yielding plants produce Santa Fe Grande type fruit that measure 1½"W x 3-4"L. The medium-hot fruit ripen from a pale cream color to a creamy orange to an orange red at full maturity. High resistance to TMV. ***11660***

EXTRA-HOT PEPPERS

GHOST PEPPER (BHUT JOLOKIA)

95 Days. With Scoville readings that can exceed 1,000,000 units, Ghost Pepper, also known as Bhut Jolokia, is legendary as one of the world's hottest peppers! Ghost Peppers grow slowly at first but eventually become a tall vigorous plant that can reach 4' in some locations. The thin-walled, wrinkled, pointed fruit are 3-3½" in length. Two strains available:
GHOST PEPPER RED - ripens green to red. ***12798***
GHOST PEPPER MULTI-COLOR - ripens green to variations of red, peach, and yellow. ***11443***

RED SAVINA

100 Days. This red habanero held the world record for hottest pepper from 1994 to 2006 before it was displaced by Bhut Jolokia. The 1½-2" long peppers are glossy, bright red, and have an intense heat (up to 580,000 Scoville), followed by a fruity flavor and aroma. Upright bushy plants set heavy yields of these spicy lantern-shaped peppers. ***14070***

TRINIDAD SCORPION

100 Days. One of the hottest peppers in the world, Trinidad Scorpion can reach over 2 million Scoville units! The petite fruit have a smoother skin than others in this class, and a slightly fruity flavor to accompany the high heat. ***12981***

CAROLINA REAPER

110 Days. A recent Guinness Record holder for hottest pepper in the world (de-throned in 2023 by 'Pepper X'), Carolina Reaper averages 1.5 million and peaks at 2.2 million Scoville units. Ripening to a deep red color, the fruit have a bumpy surface and average 1.5" W x 2"L. ***12980***

PUMPKINS

Pumpkins are the top product for fall sales, perfect for roadside stands, wholesale markets, agritourism operations, and more! With over 100 pumpkin varieties ranging from miniature to extra-large in size, and including orange, white, yellow, multicolor and warted selections, we're confident you'll find the varieties that are perfect for your marketplace.

With many pumpkin varieties to consider, variety selection can become a daunting task. We're here to help! Our in-house product specialists will aim you in the right direction for market-leaders, planting instructions and cultural practices. Call us toll-free **800.544.7938,** or visit us at **harrisseeds.com.**

Special Note: This section has been ordered by *Days to Maturity* for your convenience. To view offering alphabetically, see page 118.

LARGE PUMPKINS

BELLATRIX F1 PMP 20-25 LBS.

90 Days. Bellatrix averages 20-25 lbs. and boasts high yields on strong plants. A very uniform fruit shape is supported by a tough, dark green stem. Intermediate resistance to PM. ***12827***

BELLATRIX F1

CARRIE F1 PMP 16-20 LBS.

90 Days. Burnt orange fruit weigh 16-20 lb. with an attractive uniform round shape and dark green stems that are firm and well attached. The perfect size for roadside sales or packing 55 count wholesale bins. Carrie's compact semi-bush plants offer intermediate resistance to PM and allow closer spacing for higher yields per acre. ***12855***

CARRIE F1

EARLY KING F1 PMP 22-28 LBS.

90 Days. Full vines produce very good yields of 22-28 lb. fruit that have medium ribs and a medium-dark orange color. The fruit are round to slightly tall in shape and have strong dark green stems. Intermediate resistance to PM. ***11926***

EARLY KING F1

HERMES F1 PMP 10-15 LBS.

90 Days. This early, medium-sized pumpkin is set in numbers on highly productive semi-bush plants with PM protection. Hermes is round, medium ribbed and dark orange with a characteristically strong Harris Moran stem. Ideal size and uniformity for 50-60 count bins. ***12805***

ORANGE DAWN F1 PMP 16-25 LBS.

90 Days. An improvement on Orange Sunrise with a thicker seed coat, Orange Dawn provides the same precocious earliness, uniformity, and quality we expect. The 16-25 lb. fruit are round and medium orange, with slight ribbing and a strong dark stem. Intermediate resistance to PM. ***13541***

ORANGE SUNRISE F1 PMP 15-25 LBS.

90 Days. This early maturing precocious pumpkin has an attractive round shape, bright orange color, and nice ribbing. The vines offer good yields and intermediate resistance to PM. Orange Sunrise is a great choice for short season or gap plantings and offers harvest date flexibility. Average 30-35 bin count. ***12442***

HANNIBAL F1 PMP 18-22 LBS.

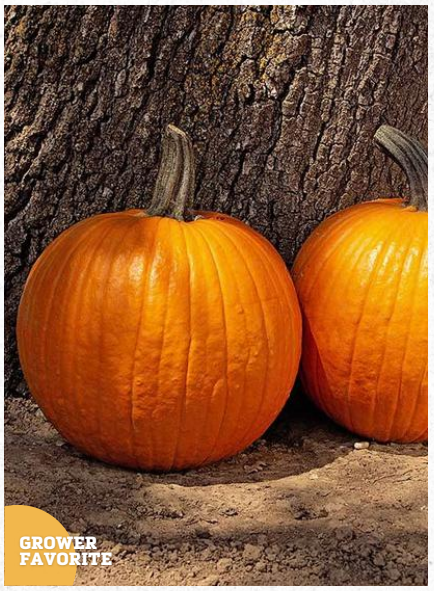

95 Days. Rich orange 18-22 lb. fruit are produced on strong vines that offer intermediate resistance to PM. The fruit have uniform size, slightly tall shape, medium ribbing, and dark strongly attached medium-thick stems. ***12203***

LARGE PUMPKINS (CONTINUED)

BAYHORSE GOLD F1 PMP 15-20 LBS.

100 Days. Bayhorse Gold is well-suited to roadside and wholesale markets with a medium rib and strong dark stem for a classic look. The uniform dark orange pumpkins average 15-20 lbs. with a consistent round shape. Full vines offer intermediate resistance to PM and benefit from wider spacing for best results. To achieve 40 bin-count size provide a minimum of 24 square feet per plant, and for 30-35 bin-count size allow 30 square feet per plan. ***13315***

BIG DORIS F1 PMP 28-30 LBS.

100 Days. Big Doris sets strong yields of large uniform fruit in only 100 days, even at tighter plantings. The 30 lb. fruit are medium orange with moderate ribbing and strong thick stems. Typically sizes at a 35 bin count. Intermediate resistance to PM. ***12862***

CARBONADO GOLD F1 PMP 15-18 LBS.

100 Days. A very dark orange, uniformly round pumpkin perfect for roadside or wholesale with a 40 bin-count size. Fruit weigh 15-18 lbs. with a medium-deep rib and strong dark stem. Full vine plants have high resistance to PM and perform best at a spacing of 25-30 ft^2 per plant. ***13433***

JUSTIFY F1 PMP 20-25 LBS.

100 Days. Burnt orange fruit weigh 20-25 lbs. and are set on vigorous vines with intermediate resistance to PM. The mid-length dark green stems are strong and well attached to hold up through harvest. Fruit have a uniform round to upright shape and pronounced ribbing. ***13138***

KARMA F1 PMP 18-22 LBS.

100 Days. Harris exclusive! Karma is a standout variety that produces large, round 18-22 lb. fruit. Pumpkins are dark orange with medium ribbing and well attached, dark green handles. Strong vines offer intermediate resistance to PM. ***13451***

KRATOS F1 PMP 20-30 LBS.

100 Days. Kratos is our most widely grown and reliable variety that offers growers a large-stemmed pumpkin with reliable shape and size. Strong plants with a semi- vine growth habit produce 20-30 lb. medium-dark orange fruit with a flat-round shape, medium ribbing, and large firmly attached stems. High yield potential makes Kratos a grower favorite. Typical bin count 30-36. ***12129***

SPARTACUS F1 PMP 18-22 LBS.

100 Days. High yield potential for uniform, blocky round 11 x 13" fruit with dark orange color and a medium-deep rib. The 40 bin-count size is well-suited to roadside and wholesale markets. Semi-vine plants have intermediate resistance to PM. ***13044***

APOLLO F1 PMP 18-30 LBS.

105 Days. Apollo is a large pumpkin with intermediate resistance to PM. The 18-30 lb. fruit have dark orange color, medium ribbing, and large well-attached stems. An excellent complement to either Gladiator or Aladdin, the fruit is produced on space-saving, semi-vine plants. Maturing 7-10 days earlier than others in this class, Apollo offers added advantages to your pumpkin line-up. ***11719***

CAPTAIN JACK F1 34-45 LBS.

105 Days. An extra-large pumpkin that has an upright shape and large well-rooted stems. Vigorous large vines produce good yields of 35-45 lb. fruit with dark orange color and medium ribbing. ***11477***

All-America Selections Winner · Grower Favorite · 2027 Introduction · PMP Powdery Mildew Protected

SECRETARIAT F1 PMP 15-25 LBS.

105 Days. This thick-stemmed dark orange pumpkin has a slightly flattened shape. The medium-large vines have intermediate resistance to PM and are very productive, bearing multiple fruit per plant. The exceptionally large stems will receive attention at roadside stands and U-Pick pumpkin patches. ***12628***

GALACTICA F1 25-30 LBS.

110 Days. Large 25-30 lb. fruit are produced on a vigorous, restricted vine. This round, dark orange pumpkin is sure to turn heads with its impressive size, medium ribbing, and a strong, deeply embedded handle. Growers will love the uniform shape and size, as well as the consistent yield. Galactica has also shown reliable set under high temperatures. ***13936***

MAGICIAN F1 PMP 10-16 LBS.

110 Days. Semi-vine plants offer intermediate resistance to PM and ZYMV, resulting in good yields of 10-16 lb. fruit. The 10"W x 12"T fruit have an excellent deep orange color, moderate ribbing, and medium-sized stems that are firmly rooted. Magician has shown an elevated level of intermediate resistance to PM in the field, which translates into higher marketable yield potential. U.S. Patent 6,414,224 and 7,166,772. ***01678***

RHEA F1 PMP 20-30 LBS.

110 Days. Large vines, which have intermediate resistance to PM, produce good yields of 20-30 lb. fruit. The fruit have a flat-round shape, a rich dark orange color, and strong thick dark green stems. Rhea has well defined ribs, great eye-appeal, and excellent uniformity of shape. ***11724***

ZEUS F1 PMP 16-20 LBS.

110 Days. This beautiful variety produces strong yields of medium- large consistently sized round fruit with large firmly attached stems, perfect for retail sales. Its rich dark orange color and medium ribbing give it sales-worthy eye appeal. Strong semi-vines offer intermediate resistance to PM and ZYMV. Zeus is also a great 45-50 bin count variety for both wholesale and retail markets. ***12130***

ADONIS F1 PMP 25-40 LBS.

115 Days. This upright, barrel-shaped, orange pumpkin has nice ribbing and a long, firmly attached stem. Strong, well-adapted vines offer consistent fruit set of 25-40 lb. fruit in 115 days, reliable across conditions and growing areas. Fruit average 14-15" tall and 13-14" in diameter, with 15-24 bin counts. Intermediate resistance to PM. ***13081***

ALADDIN F1 PMP 25-35 LBS.

115 Days. Dark orange fruit tip the scales at 25-35 lbs. and set near the crown on vigorous semi-full vines. The 12"W x 15"T fruit have moderate ribbing and large stems that are firmly rooted into the fruit. Aladdin's intermediate resistance to PM allows you to produce high quality, large fruit that will command top dollar at your roadside stand or on the wholesale market. ***01684***

ARES F1 PMP 22-28 LBS.

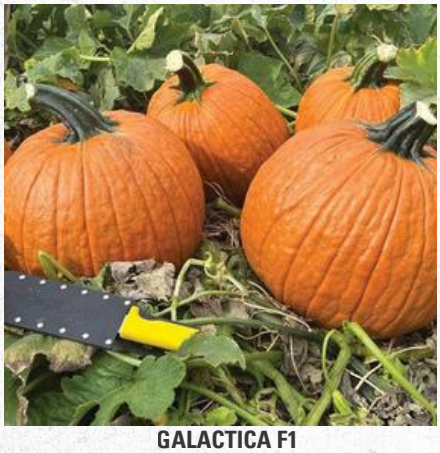

115 Days. Ares' thick extra-long and firmly attached stems really set it apart from the other tall pumpkins on the market. The dark orange fruit average 22-28 lbs., are very uniform for size and shape, and have excellent ribbing. Ares is produced on vigorous vines that offer excellent yield potential and intermediate resistance to PM. ***12131***

CRONUS F1 PMP 30-55 LBS.

115 Days. Very attractive 30-55 lb. fruit feature a rich dark orange color, well-defined ribs, and a consistent blocky/round shape. Its exceptional stem is long, dark colored, well-rooted, and has high dry matter, which leads to less stem shrinkage after harvest. Cronus is produced on large vigorous vines with intermediate resistance to PM and offers exceptional yield potential when adequate space and nutrition are provided. ***11249***

LARGE PUMPKINS (CONT.)

GLADIATOR F1 ● PMP 20-25 LBS.

115 Days. A long-time grower favorite variety for uniform 40 bin count pumpkins. In field comparisons, Gladiator demonstrates improved homozygous intermediate resistance to PM. The round deep orange fruit have moderate ribbing and measure 13"W x 12"T. Gladiator's long stems are thick and firmly rooted to the 20-25 lb. fruit. Vigorous semi-vine plants produce good yields of classic attractive pumpkins that are very uniform in size and shape. U.S. Patent 7,166,772. ***00700***

GRIFFIN F1 PMP 25-40 LBS.

115 Days. A large 25-40 lb. carving pumpkin with a tall, upright shape. The fruit have a thick dark green stem, smooth glossy rind, dark orange color, and medium ribbing. With a long stem and average height of 15-18", Griffin makes a statement in fall displays, especially beside front doors and on porches. Full vines have been known to set well, even at high planting density, maintaining uniform fruit size and shape. Intermediate resistance to PM. Typically sizes at a 15-24 bin count.***13234***

HOWDEN 20-25 LBS.

115 Days. The deep round fruit average 20-25 lbs. and their extra-thick flesh makes them less likely to be lopsided. Howden's hard, ridged, and richly colored skin keeps in prime condition for a remarkably long time and the variety offers intermediate resistance to Black Rot. Developed as a private stock by John Howden of Massachusetts, this variety was released exclusively to Harris many years ago. ***00691***

HOWDEN BIGGIE 40 LBS.

115 Days. Howden Biggie sits upright and has true pumpkin shapes ranging from globe to tall globe. The dark orange fruit average 40 lbs. and have thick flesh, which helps maintain their uniform shape. This variety's consistent shape over a range of sizes provides a wider assortment of marketable fruit. U.S. PVP 9200044. ***01685***

MAGIC LANTERN F1 PMP 16-24 LBS.

115 Days. Classic, slightly upright 16-24 lb. fruit are produced on space-saving semi-vine plants. Fruit average 12"W x 14"T and have an attractive dark orange color with medium ribs. Growers note good crown set on Magic Lantern's vines, along with higher yields per acre from closer plantings. Intermediate resistance to PM. ***01171***

MAGIC WAND F1 PMP 15-25 LBS.

115 Days. This improved variety offers Magic Lantern's great color and uniformity, plus a larger,more firmly rooted stem. The 15-25 lb. dark orange fruit have goodribbing and a round to slightly flattened shape. Magic Wand has alarger vine than Magic Lantern, but it offers stronger intermediateresistance to PM. ***11681***

OLYMPUS F1 PMP 25-35 LBS.

115 Days. Dark orange fruithave a flattened round shape and a strong, firmly attached stem. Measuring 12" tall and 14" in diameter, Olympus is an excellent carving pumpkin. Strong, well-adapted vines offer consistent fruit set in 115 days, and yield for a reliable crop across conditions and growing areas. Average 18-24 fruit per bin. Intermediate resistance to PM. ***13080***

ORANGE RAVE F1 PMP 15-25 LBS.

115 Days. From the Harris Moran family of pumpkins, Orange Rave offers the preferred dark orange color and strongly attached stems customers seek. Semi-vine plants lend PM protection and set medium-sized 15-25 lb. fruit in 115 days. Fruit shapes vary from rounded to slightly upright with moderate ribbing, making Orange Rave an easy choice for adding the right amount of variability to roadside stand offerings. ***12907***

All-America Selections Winner ● Grower Favorite ● 2027 Introduction PMP Powdery Mildew Protected

THUMPKIN 15-25 LBS.

120 Days. Thumpkin was bred by Chris Awald of North Collins, NY. Deep oblate shaped fruit with good ribbing are produced on vigorous full-size vines. The dark orange fruit have remararkably long, thick, strongly-rooted stems that measure 4-10" in length. The fruit are thick- walled and weigh between 15-25 lbs. Thumpkin requires extra space for best success. ***See specific cultural information below. 11247***

WOLF 15-25 LBS.

120 Days. Round to oblate-shaped 15-25 lb. fruit have a deep orange color with moderate ribs and long thick strongly-rooted stems. The flesh thickness is excellent, which helps to prevent flat-sided fruit and makes them deceivingly heavy for their size. Wolf produces a range of sizes and shapes, but all will have the trademark stem. Wolf was developed by Chris Awald from North Collins, NY and requires extra space for best success. ***See specific cultural information below. 11682***

PHAT JACK 50+ LBS.

125 Days. Phat Jack vines produce attractive dark orange fruit that can exceed 50 lbs.! The tall round fruit have medium ribbing and thick stems that give it a traditional Jack-O-Lantern look. ***12689***

Wolf and Thumpkin Cultural Information: Plant Wolf and Thumpkin as early as possible for best results. These varieties have an extremely large and vigorous vine, so a final stand spacing of at least 6' in the row, with 12' between the rows is recommended. Growers with very fertile ground should lengthen the in-row spacing to 8'. Crowding the spacing on these varieties will decrease size and yield potential.

EXTRA LARGE PUMPKINS

Extra large pumpkin culture: Fertile soil, irrigation, and wide spacing are essential for successful production of extra-large pumpkins. Composted manure is a good source of the nutrients needed to produce the largest pumpkins. Allow vines to set fruit and after a few weeks of growth, remove all but the single largest fruit. Ideal spacing for these varieties is a minimum of 72 sq. ft. (6' x 12') per plant. Irrigate with a drip system to keep soil evenly moist and to minimize the spread of Powdery Mildew. For more information see the pumpkin culture guide posted at harrisseeds.com.

BIG MOOSE 50-125+ LBS.

110 Days. Large vigorous vines produce good yields of extra-large fruit. The fruit have a medium red-orange color with occasional tan striping, slight ribs, and an oblate to round shape. Depending on cultural practices, the fruit can weigh from 50 to more than 125 lbs. Note: A small percentage of the fruit may be a salmon color. ***11685***

PRIZEWINNER F1 75-150 LBS.

120 Days. This hybrid fits between our Big Moose and Atlantic Giant in size. It can grow from 75-150 lbs., depending on cultural practices. With a fairly uniform shape for a big pumpkin and a consistent bright reddish-orange color, it is a good fit for roadside stands. ***01691***

DILL'S ATLANTIC GIANT 200-300+ LBS.

125 Days. This variety is easy to grow but requires plenty of space, as vines spread 25 ft. or more. Fruit often weigh 200-300 lbs. with average care, and the world record is over 2000 lbs.! These giant deep-round yellow-orange pumpkins add giant fun to fall markets! Cultural information is included on each package. ***00689***

FARMORE® FI400 SEED TREATMENT

FarMore Treatment offers a first line of defense against several key seed and seedling diseases and insects. The industry standard formulation of Cruiser® 70WS insecticide and three fungicides, Apron XL®, Maxim®4FS, and Dynasty® protect seeds prior to, during, and immediately following germination and emergence.

BROAD-SPECTRUM DISEASE PROTECTION

Proven field performance against:

- General damping-off and seed blight
- *Fusarium* spp.
- *Pythium* spp.
- *Rhizoctonia* spp. (including post emergence protection)

EXCELLENT INSECT PROTECTION

Early-season insect protection can reduce the possibility of insect-vectored diseases. FarMore provides excellent protection against Striped Cucumber Beetles for approximately 21 days after germination occurs.

PERFORMANCE AND CONVENIENCE

- Early season protection against disease and Cucumber Beetles
- Broad-spectrum protection in variable environmental conditions
- Enhanced disease protection gets crops off to a healthy start to maximize yield and quality potential
- Treatment is delivered in the bag, on the seed, to ensure proper application and convenience

LARGE, XL & WARTED PUMPKIN PRICING

All seed is treated with Cruiser (InsectGuard) unless noted otherwise

WARTED PUMPKINS

TOAD F1 1½–2½ LBS.

85 Days. This small-fruited semi-hard shell variety has multiple tiny warts that truly give it unique character. Bush plants produce round to oval-shaped fruit that have a bright orange color and weigh 1½-2½ lbs. Toad's fruit have a smooth rind behind the warts and a strongly attached, well-proportioned stem. Note: Fewer warts will appear when grown under stressful conditions. ***11980***

GRIZZLY BEAR F1 PMP 6-8 LBS.

90 Days. This small round warted pumpkin will offer a new look to fall displays with its unique caramel color. Grizzly Bear has a strong dark green stem and hard warts that do not damage easily, perfect for boxing. Strong vines offer intermediate resistance to PM and high fruit set. A perfect choice for customers seeking something different. ***12851***

SANCHEZ 3-6 LBS.

95 Days. Full vines produce good yields of 3-6 lb. fruit that measure 6-7"W x 4-5"T. The bright orange pumpkins have moderate to heavy warting and thin stems. This is a great novelty variety to offer for fall sales. Note: There may be a small percentage of gourd off-types in this variety. ***11489***

WARTY GNOME F1 PMP 4-6 LBS.

95 Days. This warted novelty pumpkin with orange and yellow stripes and a long dark green stem is sure to stand out in fall displays. The small flat-round fruit are hard-shelled, weigh 4-6 lbs. and measure 7"W x 4"T. Intermediate resistance to PM. ***12685***

SCARFACE F1 PMP 12-20 LBS.

105 Days. Large pumpkins have an upright shape and eye-catching warts that turn from green to orange. The rind and warts are hard- shelled, helping to minimize damage in the field or post-harvest. Scarface is slightly larger and more upright than Warty Goblin. The full vines have intermediate resistance to PM. ***13087***

WARTY GOBLIN F1 PMP 8-20 LBS.

105 Days. Warty Goblin produces heavily warted fruit that are frighteningly cool! The round to slightly tall fruit have a hard orange shell and green warts that stay green for several weeks after harvest. Warty Goblin has a well-proportioned dark green stem that is firmly attached. The warted fruit are produced on a full vine that offers intermediate resistance to PM. ***11613***

MINIWARTS F1 PMP 3½ LBS.

115 Days. This round 3½ lb. pumpkin is a smaller version of Warty Goblin with the same orange shell and striking green warts. The strong stem and small fruits make Miniwarts a perfect choice for pumpkin patches and roadside stands. High yields can be expected from semi-vining plants with intermediate resistance to PM and ZYMV. ***12684***

LIL' ORANGE-MON F1

MINIATURE PUMPKINS

BATWING MIX ½-1 LB.

80 Days. This unique ornamental produces small ½-1 lb. fruit with many having a novel, dipped-in-dark-green-paint look. Batwing will produce a variation of fruit colors, with some being completely orange, some completely dark green, and a good quantity being half orange and half green. Color will be expressed best when planted later and harvested earlier than other varieites. ***12338***

MIDNIGHT F1 PMP 1-1½ LBS.

80 Days. Midnight is a nearly black miniature pumpkin with a round, ribbed shape that is eye-catching in mixed bins. The extremely dark green fruit are ready to pick in 80 days, and are set in numbers on semi-bush plants with intermediate resistance to PM. Midnight pairs nicely with white and orange pumpkins for fall displays. ***12852***

SPARK F1 PMP ½ LB.

90 Days. A highly uniform mini pumpkin with yellow and orange stripes and a dark green, strongly attached stem. Fruit measure 3½"W x 2"T. Top yields are produced on vigorous vines with high resistance to PM. A perfect pick for fall markets! ***12791***

YELLOW JACKET F1 7-9 oz.

90 Days. A unique golden yellow mini pumpkin perfect on its own or paired with other colors for fall displays. Fruits have a flattened ribbed shape and are set in strong numbers close to the crown of vigorous plants. Diligent insect control is recommended to prevent virus infection and the resulting green flecking. ***13448***

BABY BOO 4-6 oz.

95 Days. The fruit average 2-3"W x 2"T and have a white edible flesh. The white fruit pair beautifully with orange and multi-colored varieties. For good white color, harvest before full maturity as the fruit will turn a pale yellow when fully ripe. Patent 6300546B1. ***00688***

WEE-BE-LITTLE 10-14 oz.

95 Days. This true miniature pumpkin produces remarkably small fruit that are about the size of a baseball. The bright orange fruit are smooth enough for painting, and their thin dark stems are well attached. Its semi-bush habit allows for close spacing, which leads to higher yield per acre. The fruit weigh approximately 10-14 oz. and average 3-3½" in diameter. (P.V.P.) ***11023***

CRUNCHKIN F1 5-9 oz.

100 Days. This hard shell version of Munchkin is sure to be a hit for fall sales. The flat-shaped fruit have very pronounced ribs and a medium-orange color with slight flecking. Crunchkin produces strong yields of 8-12 fruit at the crown of bush-type plants, and its hard shell lends to the fruit's extended storability. ***11714***

JILL-BE-LITTLE PMP 4-8 oz.

100 Days. This miniature pumpkin has deep orange color, deep sutures, and resistance to PM. The strong vines produce high yields of fruit that are 3-4"W x 2½"T. Jill-Be- Little has a well-proportioned dark stem, flat shape with a concaved top, and will make a perfect miniature pumpkin for fall decorating. (P.V.P.) ***12201***

LIL' ORANGE-MON F1 1-2 LBS.

100 Days. Unique mini pumpkin that complements Lil' Pump-Ke-Mon. The 1-2 lb. fruit are dark orange and covered with creamy orange flecking. A long thin stem and deep ribs give this variety a nice look for fall displays. The flattened fruit measure 4"W x 2"T and are set on bush plants. ***11696***

All-America Selections Winner · Grower Favorite · 2027 Introduction · PMP Powdery Mildew Protected

LIL' PUMP-KE-MON F1 1-2 LBS.

100 Days. This mini pumpkin features orange and green stripes on a white background for a unique look that your customers will love. Lil' Pump-Ke-Mon has a distinctive flat shape with slight to medium ribbing emphasized by the bright stripes. The 1-2 lb. semi-hard shelled fruit is set on a compact vine that offers top yields and easy harvest. ***01696***

SNOWDROP F1 PMP 1 LB.

100 Days. Miniature round to upright white pumpkins are set on medium vines in numbers as high as 15-20 fruit per plant. Strong dark green stems contrast the bright white color that stays white through the season. ***13148***

MUNCHKIN 4-8 oz.

100 Days. Children love it, and it's perfect as a fall decoration. Munchkin is only 3-4" wide and has a bright orange color with deep sutures. This miniature novelty is great for dried arrangements and other decorations. NOTE: Munchkin can be more susceptible to fruit greening from mosaic viruses than other varieties. Good aphid control is essential for minimizing infection. ***00698***

PIXIE F1 5-8 oz.

100 Days. This hard-shelled mini is slightly larger than Munchkin but smaller than Crunchkin, with a flecked orange color, strong stem, and slight ribbing. Pixie offers improved virus protection and harvest flexibility from the precocious gene, and lengthened storability from its hard shell. Growers can expect strong yields of 10-12 fruit per plant with low incidence of virus flecking, set close to the crown for easy harvest. ***13079***

APPRENTICE F1 1 LB.

115 Days. Compact bush plants produce very good yields of 1 lb. hard shell pumpkins. The round 4-5" diameter fruit are smooth with no ribbing and have an eye-appealing burnt orange color. The stems are well proportioned to the fruit, which also have intermediate resistance to Phytophthora and Fusarium fruit rots. A fantastic variety for decorating and painting, as fruit have a very long shelf life. ***01679***

PUMPKIN SERIES

MINI-ITA SERIES PMP 1-1½ LBS.

80-90 Days. This series of ornamental-edible mini pumpkins features disk-shaped fruit with deep ribbing and long, thin stems that hold up to binning. The hard-shelled pumpkins are set in high numbers on semi-bush plants with intermediate resistance to PM. Each variety is striking on its own, as well as in various color combinations. Pumpkins weigh 1-1½ lbs. and have flesh and sugars similar to acorn squash.

SMALL PUMPKINS

FLATSO F1 6-8 LBS.
85 Days. Flatso is sure to draw customer attention with its unique flat oval shape that resembles Long Island Cheese pumpkin, and the bright orange color and moderate ribbing that add a classic pumpkin look. The 6-8 lb. fruit are produced on full-size vines and measure 9-10"W x 5-6"T. The thin dark stems contrast well with the orange fruit. ***11024***

PRANKSTER F1 PMP 3 LBS.
85 Days. Prankster is a very nice 3 lb. pumpkin that is ideal for painting and the boxing market. Semi-bush plants produce good yields of 6"W x 4"T fruit that have excellent stems. The fruit have a good deep orange color and shallow ribs. Intermediate resistance to PM. ***11717***

WINTER LUXURY PIE ORGANIC 7-8 LBS.
85 Days. Vigorous full vines set 7-8 lb. fruit with unique skin that is finely netted, giving it a beautiful golden russet hue. Regarded as one of the tastiest pumpkins for pie, fruit should keep through Thanksgiving under optimal storage conditions. ***12430***

DARLING F1 PMP 6-8 LBS.
90 Days. These unique upright, barrel-shaped pie pumpkins have a dark orange color and slight ribbing. Produced on strong plants with intermediate resistance to PM, the 6-8 lb. fruit have stems that are well-rooted and well-proportioned to their size. ***11478***

EARLY ABUNDANCE F1 PMP 4-7 LBS.
90 Days. Ideal for areas with a short growing season, or for growers hoping to make up some planting time late in the season. Semi-vining plants produce large yields of uniformly round 4-7 lb. dark orange fruit with shallow ribs and well-attached stems. Intermediate resistance to PM. ***11927***

FORT KNOX PMP 6 LBS.
90 Days. Dark orange fruit weigh 6 lbs. and have a strong dark green handle that holds up well. Medium vines with high resistance to PM offer high yield potential of uniform fruit. An excellent choice for roadside and fall agritourism sales. ***13574***

NEON F1 7-8 LBS.
90 Days. Uniform 7-8 lb. fruit have a vivid, almost fluorescent, orange color. These small jack-o'-lanterns have medium ribs and thick black stems. The semi-bush plant allows for higher plant populations and yield 2 fruit each, resulting in higher yields per acre than full-size vine types. ***01698***

JACK SPRAT F1 PMP 2-3 LBS.
100 Days. Small dark orange pumpkins weigh 2-3 lbs. with a slight rib and dark green embedded stems. The semi-bush plants carry high resistance to PM and consistently set high yields of blocky round fruit with uniform size and shape. ***12819***

FIELD TRIP F1 PMP 5-7 LBS.
105 Days. This hybrid is appropriately named for growers who cater to school tours at their farm market. Field Trip produces 5-7 lb. fruit with deep orange color, moderate ribbing, and distinctive long, well- rooted stems. The attractive slightly flattened fruit are the ideal size for children to carry from the field and then home from school. Semi-vining plants have intermediate resistance to PM. ***11692***

All-America Selections Winner · Grower Favorite · 2027 Introduction · PMP Powdery Mildew Protected

MYSTIC PLUS F1 PMP 7-8 LBS.

105 Days. The deep orange fruit of Mystic Plus measure 8"W x 6"T, weigh 7-8 lbs., and offer plenty of rich sweet flesh for cooking. Large sturdy stems are strongly attached. Semi-vining plants have intermediate resistance to PM and excellent fruit set, maximizing yield potential per acre. ***01693***

LITTLE GIANT F1 PMP 2-4 LBS.

108 Days. This beautiful pie pumpkin offers rich dark-orange color and dark firmly attached stems. The 2-4 lb. fruit are smooth enough for painting, and their light ribbing gives them the look of real miniature jack-o-lanterns. This versatile pumpkin is ideal for school field trip tours. Fruit grow on full-size vines with intermediate resistance to PM. U.S. Patent 7,166,772. ***11713***

MISCHIEF F1 PMP 2-4 LBS.

108 Days. A perfect sized pumpkin for roadside or farmers' markets, chain store accounts, or school tours. The appealing 2-4 lb. fruit have rich dark orange color and are set heavily on semi-vining plants. Mischief has a tall round shape with well defined ribs and strongly attached dark stems. Fruit are very uniform for both size and shape, and the plant offers intermediate resistance to PM. ***11092***

CANNON BALL F1 PMP 5-6 LBS.

110 Days. Vigorous bush plants produce good yields of 5-6 lb. round fruit that have an attractive burnt-orange color, slight ribbing, and large firmly rooted stems. The fruit are approximately 7" in diameter and have a good weight for their size. A long shelf-life makes Cannon Ball great for painting and school tours. Intermediate resistance to PM. U.S. Patent 7,166,772. ***11688***

IRON MAN F1 PMP 3-4 LBS.

110 Days. Round to globe-shaped 3-4 lb. fruit measure 6-7" in diameter. This hard shelled variety is great for painting and has a nice dark orange color and strong well-proportioned stems. The hard shelled fruit store for months and have intermediate resistance to Fusarium and Phytophthora fruit rots. Iron Man's vigorous full vine has intermediate resistance to PM. U.S. Patent 7,166,772. ***01677***

VOODOO F1 PMP 2-3 LBS.

110 Days. An impressive 2-3 lb. pumpkin with exceptional yields exceeding 10 fruit per plant in some settings. Voodoo has a flattened shape, dark orange color, medium ribbing, and a long dark green stem. The uniform fruit are set close to the crown for easy harvest. Intermediate resistance to PM. ***13576***

LIL' IRONSIDES F1 2 LBS.

115 Days. Uniform round 2 lb. fruit have dark stems and are extremely hard-shelled. The tough shell is difficult to carve, but gives Lil' Ironsides an extended shelf life and makes it a great choice for field trips, painting and for pumpkin cannons and catapults! Vines offer high yield potential and intermediate resistance to Fusarium and Phytophthora fruit rots. ***01689***

NAKED-SEEDED PUMPKIN

NAKED BEAR F1 PMP 2-4 LBS.

105 Days. Measuring 5-6" wide and weighing 2-4 lbs., Naked Bear fruit have a light orange color, shallow ribs, and short thick stems, though their most notable feature is high production of hull-less seeds. Each fruit yields an average of 1.75 oz. of seed, putting them at about 5% seed by weight. Use Naked Bear for boxed pie pumpkins, the edible seed pack market, or pumpkin seed oil production. Medium vines have intermediate resistance to PM. Germination and establishment may be challenging with naked seeds, a margin of 20% is recommended for transplant production (University of R.I.). ***12202***

SILVER MOON F1

WHITE PUMPKINS

MOONSTACKER F1 10-15 LBS.

95 Days. This bright white variety is extremely oblate with deep ribbing, making it the perfect choice for stacking. Fruit store well and the thick bright yellow-orange flesh is of high eating quality. Pairs beautifully with blue, pink and red stacking varieties. ***13132***

SPECTER F1 PMP 12-20 LBS.

95 Days. An early maturing creamy white pumpkin with a semi-hard, lightly warted shell. Uniform medium-round fruit with large firmly attached stems are produced by plants with intermediate resistance to PM and high yield potential. ***12683***

AVALANCHE F1 PMP 5-7 LBS.

100 Days. A perfect companion to Lemon Sun and Hot Chocolate, Avalanche produces bright white pumpkins on a bush plant. Fruit has strong, well-attached handles, medium ribbing, and holds its white color well. Plants provide intermediate resistance to PM and produce heavy yields of uniform, round fruit. ***13635***

BLANCO F1 PMP 4-6 LBS.

100 Days. Blanco produces a true white pumpkin with shallow ribs. Unlike others, it shows moderate resistance to color change when exposed to sun and light frosts. Its 4-6 lb. fruit have a uniform round shape, white flesh, and long green stems. An excellent small white vari-ety for wholesale or retail sales. Intermediate resistance to PM. ***11925***

CRYSTAL STAR 25-35 LBS.

100 Days. An attractive large white pumpkin that does not yellow or bruise. Crystal Star's medium vines produce strong yields of smooth round 25-35 lb. pumpkins with light ribbing. ***12783***

GHOST TOWN F1 PMP 7-10 LBS.

100 Days. Growers looking for a true white pumpkin will be thrilled with Ghost Town. Bright white fruit have medium ribbing, a dark green handle and maintain their color well after harvest. The 7-10 lb. fruit are produced on a vigorous semi-vine with good yield potential. Intermediate resistance to PM. ***13730***

LUMINA 10-15 LBS.

100 Days. Lumina's 10-15 lb. fruit vary slightly in size and offer globe to flattened globe shapes. The white skin is excellent for painting and contrasts perfectly with bright orange flesh when fruit are carved. Harvest Lumina early (late Aug. – early Sept.), as stress causes a blue tinge on the white skin. (P.V.P.) ***01686***

MOONSHINE F1 PMP 8-12 LBS.

100 Days. These very uniform 8-12 lb. fruit have the strongest and darkest colored stem in this class. Moonshine's striking white color, slight ribbing, and smooth skin make it ideal for painting. Intermediate resistance to PM. ***12612***

POLAR BEAR F1 30-65 LBS.

100 Days. These large to extra-large round white fruit have good color retention after maturity. Polar Bear's long vines produce 30-65 lb., lightly ribbed fruit. Add these extra-large white pumpkins as a focal point in roadside displays. ***12616***

SILVER MOON F1 PMP 10-15 LBS.

100 Days. Silver Moon is a hybrid variety that offers intermediate resistance to both PM and ZYMV. Full-size vines produce 10-15 lb. fruit that have wide ribs and are very uniform in size and shape. Color varies from white to pale blue with white speckling. Its edible flesh is dark orange in color. ***11694***

All-America Selections Winner · Grower Favorite · 2027 Introduction · PMP Powdery Mildew Protected

SNOWBALL F1 PMP 2-4 LBS.

100 Days. Snowball is a round 2-4 lb. pumpkin with bright white color and a long, contrasting green stem. The medium vines have intermediate resistance to PM and produce strong yields. Snowball's small size and smooth white finish make it perfect for painting. ***12446***

ICICLE F1 PMP 2-3 LBS.

105 Days. Small round pie pumpkins have moderate ribbing and thick dark green stems. Restricted vines allow higher plant populations and set 3-4 crisp white fruit per plant. Intermediate resistance to PM. ***13137***

ABOMINABLE F1 PMP 15-20 LBS.

110 Days. A medium-sized white pumpkin with a contrasting dark green stem, slight rib, and nice round to flattened-round shape. Abominable offers a larger jack-o-lantern size and style in a true white color. Pair with Blanco and Icicle for a white trio perfect for fall displays and weddings. Intermediate resistance to PM. ***13328***

NEW MOON F1 45 LBS.

110 Days. Full vigorous vines produce good yields of bright white fruit with very uniform size and shape. Its fruit are smooth and clean with slight ribbing, and even the flesh is white. The long stems are firmly attached, and the fruit can weigh up to 45 lbs. As with other white varieties, early harvesting is recommended to preserve the bright white color. ***11689***

POPCORN F1 PMP 18 LBS.

110 Days. This creamy white, heavily warted pumpkin is sure to draw attention at fall markets. Strong, dark green vines set reliable yields of 18 lb. fruit in 110 days. The long dark green stems are well-attached and contrast nicely with the pale fruit that become a buttery color with time. Handle fruit with care to minimize damage to the warts. Intermediate resistance to PM. ***13082***

STAR 7001 F1 15-18 LBS.

110 Days. This early maturing, bright white variety produces excellent yields of flat, scalloped fruit that are perfect for stacking on a semi- bush plant. Pumpkins hold their color well and have high-quality bright orange, edible flesh. ***13916***

FLAT WHITE BOER FORD 10-17 LBS.

115 Days. A unique stacking shape for specialty markets and fall displays. Vigorous vines produce 10-17 lb. fruit that are flat and slightly scalloped. The fruit have a good white color that does not bleach out or yellow over time. Flat White Boer Ford has sweet, bright orange edible flesh and stores well for winter sales. ***11486***

FULL MOON 60-90 LBS.

125 Days. Depending on growing conditions, you can produce 60-90 lb. fruit that average 24"W x 36"T. The skin is fairly smooth with slight ribs and the white color is retained best when fruit is harvested at maturity. If left in the field too long after maturity, the skin color will turn to a creamy beige. After harvest, keep the fruit in a cool shady spot for best color retention. (P.V.P.) ***11683***

PINK PUMPKINS

MORANGA 4-8 LBS.

95 Days. These 4-8 lb. squashhave a flattened oblate shape with deep ribs and beautiful colorsranging from light pink to salmon. An ingredient in traditional Brazilian cuisine, this heirloom squash is flavorful and stores well. ***12982***

COLORADO SUN F1 PMP 8-12 LBS.

100 Days. Full vines set extremely flat, ribbed, pale pink fruit with light blue mottling. Colorado Sun is the perfect size and shape for stacking, consider pairing it with white Moonstacker for a lighter color palette. The fruit also have bright yellow-orange edible flesh and excellent storage life, making this a beautiful multi-purpose ornamental edible. Intermediate resistance to PM. ***13434***

GALEAUX D'EYSINES 16-18 LBS.

100 Days. The pink skin of this unique squash iscovered with beige peanut-like bumps, giving it a truly one-of-a-kindappear ance. It's a great item for fall decoration and also for use inbak ing and soups. The moist sweet orange flesh is held in 16-18 lb.oblate-flattened fruit, which grow on full-sized vines. ***11779***

PORCELAIN PRINCESS F1 PMP 7-10 LBS.

100 Days. Smaller than Porcelain Doll but with a similar hue, Porcelain Princess will add diversity to your small pumpkin offerings. This eye-catching variety has medium-deep ribbing, and weighs 7-10 lbs. Trailing vines yield well and have intermediate resistance to PM and DM. ***12854***

PORCELAIN DOLL IMPROVED F1 PMP 15-20 LBS.

110 Days. An improvement on the original Porcelain Doll with deeper and more uniform pink color, Porcelain Doll Improved is a large, blocky, deep-ribbed squash weighing 15-20 lbs. Large vines produce excellent yields and offer intermediate resistance to PM and DM. The bright orange flesh is great for eating. ***12962***

BLUE & GREEN PUMPKINS

JADE KNIGHT F1 PMP 7-10 LBS.

90 Days. This blocky oblate squash has moderate ribbing and a unique deep gray-green color. The trailing vines set excellent yields and carry intermediate resistance to PM (race 2) and ZYMV. Perfect for ornamental display or as an edible with thick bright yellow flesh. Pair with other green and white varieties for a different take on monochrome fall decor. ***12991***

BLUE ICE F1 PMP 30 LBS.

100 Days. The blocky large 30 lb. fruit of this edible squash ripen to a soft blue-gray color. Large vines have intermediate resistance to PM. ***13149***

JARRAHDALE 6-10 LBS.

100 Days. This high quality winter squash also makes an interesting fall ornamental. Its decorative fruit are a slate-gray color with heavy rounded ribs and weigh 6-10 lbs. As a squash, it is favored because of its thick sweet high quality orange flesh. Jarrahdale is an excellent storage squash and adds interest and color to fall displays. ***11680***

MARINA DE CHIOGGIA 10-12 LBS.

100 Days. A unique green warted Italian heirloom squash valued for its eating quality, and traditionally used in preparing gnocci and ravioli. The perfect shape for stacking, this novel ornamental is also long-storing. ***12856***

SILVER EDGED 2½ LBS.

105 Days. This heirloom squash is named for the large silver-edged seeds that are easily hulled and roasted. Although the seeds are a popular ingredient in Latin American cooking, the flesh is not palatable. The attractive white fruit have green mottled stripes and make for an interesting addition to fall squash and pumpkin displays. ***11239***

BLUE DOLL F1 PMP 15-20 LBS.

110 Days. Blocky deeply ribbed fruit are a gray-blue color. Large vines produce excellent yields of 15-20 lb. fruit that have a blue colored rind and sweet deep orange flesh that is very good for pies, soups or canning. Intermediate resistance to PM and DM. ***11476***

CAKE SERIES

LEMON CAKE, CARROT CAKE, AND MOON CAKE

YELLOW PUMPKINS

MELLOW YELLOW F1 PMP **12-16 LBS.**

90 Days. This early maturing lemon-yellow pumpkin is especially eye-catching when paired with white and orange pumpkins in market displays. The 12-16 lb. round fruit have nice ribbing and a strong straight stem, while the vines offer intermediate resistance to PM. Harvest fruit when the stem is dark green to ensure they are fully ripe. Any pale yellow fruit should darken to lemon-yellow in about one week, as long as they are fully mature when picked. ***12462***

HONEYBEE F1 ● PMP **3-5 LBS.**

95 Days. Compact semi-bush plants set high yields of the cutest striped 3-5 lb. pumpkins. Harvest the fruit early for pronounced golden yellow and dark green stripes that eventually ripen to orange if left in the field. Honeybee is a smooth round pumpkin with slight ribbing along its stripes and a well-attached light green stem. Use Honeybee to add a unique look to fall displays, or even to rep your favorite black-and-gold sports team. Intermediate resistance to PM. ***13895***

BLAZE F1 PMP **3 LBS.**

100 Days. This small bright yellow pumpkin has deep-orange stripes along the ribs and strongly attached stems. The flat round fruit have shallow ribbing, average 7" in diameter by 3½" high, and weigh 3 lbs. With sweet edible flesh, Blaze is a great multi-purpose variety. The reduced vines are vigorous and have strong PM resistance. ***12970***

LEMON SUN F1 PMP **5-8 LBS.**

100 Days. Lemon Sun produces high yields of bright lemon-yellow fruit on a semi-bush plant that has intermediate resistance to PM. Round, 5-8 lb. pumpkins are eye catching with strong, dark green stems and medium ribbing. ***13851***

FIREBALL F1 ● PMP **9 LBS.**

110 Days. This striking decorative pumpkin boasts a vibrant orange and yellow striped pattern that is great for roadside sales or as an addition to mixed bins. The medium 9 lb. fruit have a flattened round shape and strong dark green stem with excellent contrast. As fruit mature, stripes transition from green to orange on an unchanging yellow background. Productive plants offer intermediate resistance to PM and ZYMV. ***13035***

LEMONADE F1 PMP **18 LBS.**

110 Days. Pair the golden yellow color of pumpkin Lemonade with orange and white varieties for an eye-catching combination! Large 18 lb. fruit have a round shape with medium ribbing. The specialty color is great for roadside sales, while the consistent size and strong stems offer flexibility for binning. Strong vines set reliable yields and carry intermediate resistance to PM. ***13059***

PUMPKIN SERIES

CAKE SERIES ● PMP **3-5 LBS.**

90 Days. These 3-5 lb. flattened pumpkins are great for creating mini-stacks, or adding to the top of larger stacks. The trio of colors has a unique flat-oblate shape, medium ribbing, and long, sturdy stems. High-yielding vines carry intermediate resistance to PM.

CARROT CAKE F1: Bright orange. ***14032***
LEMON CAKE F1: Lemon yellow. ***14030***
MOON CAKE F1: Clean white. ***14031***

All-America Selections Winner ● Grower Favorite ● 2027 Introduction PMP Powdery Mildew Protected

RED & ORANGE SPECIALTY PUMPKINS

TROLL F1 PMP 3-6 LBS.

85 Days. Compact bush plants set early yields of blue-green fruit with red-orange splotches. The square to oblate fruit have a light gray button on the blossom end, much like a Turban gourd or Buttercup squash. Similar in appearance and size to Speckled Hound, Troll is another high-quality edible ornamental with deep yellow flesh and high dry matter. Intermediate resistance to PM and ZYMV. ***13435***

AMERICAN TONDO 6-14 LBS.

100 Days. Full-size vines produce 6-14 lb. fruit with an attractive unique deep orange skin and mottled green stripes between its thick ribs. When the fruits are young, they are a two-tone speckled green color and can be eaten like summer squash. ***11028***

INDIAN DOLL F1 PMP 18-30 LBS.

100 Days. This unique variety adds interest to your fall or Halloween displays. Large flat blocky-shaped fruit with deep ribs are produced on full vines and range in color from light pink-orange to medium orange. Good for pies and soup. Intermediate resistance to PM. ***11977***

ROUGE VIF D'ETAMPES 12-18 LBS.

105 Days. "Rouge vif" means "vivid red" in French, and that is just what this beautiful variety is. Fruit are very attractive and flattened in shape, resembling a red cheese wheel. Full vines produce good yields of 12-18 lb. fruit. Its mod erately sweet flesh is well suited for use in pies. ***11488***

ONE TOO MANY PMP 20-25 LBS.

110 Days. Large vines produce white fruit that are densely laced with red -colored veins. These pumpkins resemble a bloodshot eye and weigh 20-25 lbs. Market this round to oblong variety to customers looking for a spooky and humorous addition to their fall displays. Intermediate resistance to PM. ***11978***

RED WARTY THING 20 LBS.

110 Days. This old heirloom squash produces bright orange fruit that are heavily warted and can weigh up to 20 lbs. A great decorative item also known for its good eating quality, Hubbard type flesh, and hard thick rind. Perfect for specialty fall displays at roadside stand and farmers' markets. ***11776***

CINDERELLA 10-15 LBS.

115 Days. This attractive squash adds vivid color to your fall retail displays. The flat round-shaped fruit are light orange tinged with red or green, weigh 10-15 lbs. and are perfect for stacking. The orange flesh is moderately sweet and can be used for pies. ***01683***

FAIRYTALE 15 LBS.

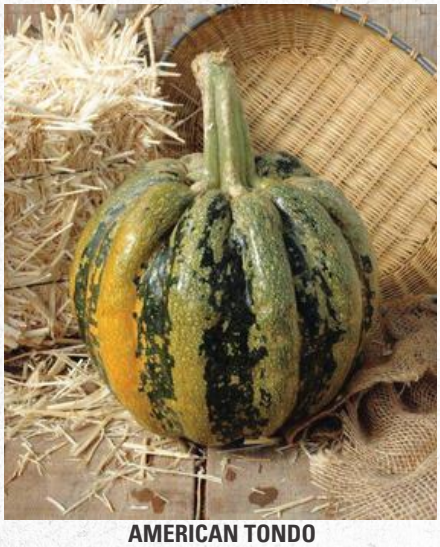

125 Days. This French heirloom variety has a Cinderella shape and unique buckskin color at maturity. Fairytale weighs an average of 15 lbs. and is 15"W x 6"T. It is heavily ridged or scallop shaped, has delicious flesh for baking, and will store for about 3 months. ***01328***

TAN PUMPKINS

BLACK FUTSU 2-3 LBS.

90 Days. Black Futsu is an attractive, unique Japanese heirloom that works well as a fall ornamental but is also delicious as an edible variety. The 2-3 lb. fruit have deep ribs, are covered in bumps and mature from a black-green color to an orange-buff color with a bit of a waxy rind or bloom. Vigorous vines boast high yield and early to mature fruit that store well for months. ***13615***

KAI KAI F1 3 LBS.

75 Days. Kai Kai makes a beautiful edible-ornamental with its green-mottled skin that matures to a solid frosted tan, and delicious soft orange flesh. The 3 lb. flattened ribbed fruit offers a rustic look for fall decor, including pumpkin stacks, and the hard skin helps it hold up through the season for cooking later in the fall. Intermediate resistance to CMV, ZYMV, and PRSV-W. ***13681***

HOT CHOCOLATE F1 PMP 5-8 LBS.

90 Days. With a unique caramel-chocolate color, strong stem and high fruit yields, Hot Chocolate is an excellent choice to introduce tan pumpkins to your market. The small fruit are similar in size and color to Grizzly Bear, but with a smooth skin. They also have edible flesh and are great for pies. Vigorous vines offer intermediate resistance to PM. ***12971***

TANDY F1 4-8 LBS.

100 Days. A striking light-tan colored pumpkin with medium green stems. The attractive fruit have a slight upright oval shape with medium ribbing. Tandy produces good yields of 4-8 lb. fruit on medium vines and is ideal for pies and canning. Market to customers looking for pastel fall decor. ***11490***

CIDER F1 PMP 18-30 LBS.

105 Days. Cider has a traditional jack-o-lantern shape with a unique light tan color, perfect for fall decor. The round 18-30 lb. pumpkins have light ribbing and well-attached dark green stems. Semi-bush vines are well-adapted to different growing environments and carry intermediate resistance to PM. ***13235***

SPICY MOCHA F1 PMP 15-20 LBS.

105 Days. A large caramel-chocolate colored pumpkin with a strong stem, uniform round shape, and deep ribbing. Spicy Mocha is a larger complement to Hot Chocolate that fits perfectly in warm Autumn color palettes. Vines can yield up to 3 fruit per plant and carry intermediate resistance to PM. ***13340***

LONG ISLAND CHEESE 8-10 LBS.

108 Days. This old heirloom variety has smooth tan skin with medium ribs and a flattened shape that resembles a wheel of cheese. The deep orange flesh is moderately sweet and great for pies. Good for long-term storage. ***01699***

ODETTE 13-22 LBS.

125 Days. A Musquee de Provence type squash that sets strong yields on vigorous vines. The 13-22 lb. fruit are large and uniform with a deeply ribbed, flattened shape, and mature from dark green to a frosted tan color. Intermediate resistance to ZYMV, WMV, and PRSV. ***13575***

PEARL ORGANIC

RADISHES

CHERRIETTE F1

20 Days. This hybrid radish produces globe-shaped cherry red roots with medium tops. Cherriette offers good yields of uniform crisp radishes that generally don't get pithy or woody, even in larger sizes. ***00702***

RED SATIN F1

22 Days. This top selling radish produces very uniform round roots with a bright red color, extremely white interiors and refined taproots. The bulb forms quickly and has excellent holding ability without getting pithy. The medium-sized tops are a deep green color and have strong attachment. ***11702***

CHERRY BELLE

24 Days. Cherry Belle has exceptionally short tops and quickly reaches edible size. The round red roots have pure white crisp flesh. Grow Cherry Belle for quick crops in the field or greenhouse. ***00706***

FRENCH BREAKFAST

25 Days. This high quality table variety is very crisp and tender. The elongated 2" roots are bright scarlet tipped with white. ***00704***

KVINTARA F1 ORGANIC

25 Days. Attractive uniform roots are tolerant to cracking with bright red color and good flavor. Strong tops are well-suited to bunching and are slow to bolt. Versatile for spring and summer sowings. A hybrid radish option for the organic market. ***13409***

PURPELLA F1

25 Days. A deep plum-colored radish with a crisp white interior, Purpella is a beautiful addition to mixed bunches or a standout on its own. The round roots are uniform in shape and size, with smooth shoulders and low cracking. Well-attached, vigorous, medium tops measure 5-6", are good for bunching, and slow to bolt. ***13422***

RED QUEEN F1

25 Days. A high-quality dark red radish with short strong tops, measuring 6-7", suited to the bunching, cello, and slicing markets. Roots have thick skin, uniform size and shape, good smoothness, and bright white flesh. High resistance to Fusarium and intermediate resistance to Downy Mildew and White Rust. ***13259***

ROBELLO F1

28 Days. A high-quality hybrid radish with uniform round roots, intense red color, and bright white internals. Plants are fast-growing, have medium-tall tops, and resistance to Downy Mildew. They perform well under stress and are suitable for hand and machine harvest. ***13577***

CHAMPION

26 Days. This vigorous All-America Selections Winner is deep-round, bright red, and very slow to bolt. From the time they first reach edible size until they grow very large, the roots stay mild, firm, and delicious without a trace of pithiness. ***00708***

PEARL ORGANIC

26 Days. Smooth round roots appear as glistening white pearls in the soil. Vigorous growth and resistance to cracking helps to extend the harvest of crisp white fleshed roots. Strong green tops make it great for bunching. Pairs well with red radishes. ***12419***

All-America Selections Winner · Grower Favorite · 2027 Introduction

RED JEWEL F1
27 Days. Rich red color makes Red Jewel a standout! Its uniformly shaped roots are early to mature and get high marks for their internal qualities. The bright white flesh is free of pithiness and bleeding. Red Jewel's strong tops are short, making it good for summer bunching. Intermediate resistance to Fusarium and Downy Mildew. ***11963***

STALAGNIT F1
30 Days. An early hybrid white icicle radish with improved quality over open-pollinated types. Stalagnit has strong 8" tops that resist bolting, and uniform root shape and appearance. The bright white pointed roots reach 3-5" long, have a slightly milder taste, and resist caving and cracking. ***13268***

WATERMELON
50 Days. This Chinese ball-shaped radish offers a pinkish-red interior color surrounded by creamy white skin that turns green at the shoulders. Depending on when they are harvested, roots can measure from 2-4" in diameter and have tall tops. The flesh is crisp and mildly sweet. Great in salads! ***11498***

BLACK ROUND SPANISH ORGANIC
55 Days. This winter radish has crisp, dark, almost black skin with a smooth white interior and mildly spicy flavor. Maturing best in cool weather, plant this radish for fall or winter harvests. Great storage capacity and medicinal properties make this variety great for winter markets. ***12553***

OSTERGRUB ROSA
55 Days. This radish produces 7-10" roots with dark rose-pink exteriors and bright white interiors. Ostergrub Rosa has a relatively smooth appearance, crisp texture that resists pithiness, and flavor that is both sweet and mildly peppery. It grows well from spring through fall. Pair with April Cross for a colorful bunch. ***11929***

APRIL CROSS F1
60 Days. The pure white roots can grow up to 16" long and 2½" in diameter. The roots have a crisp texture and a mild but subtly sweet flavorful taste. April Cross makes a great storage radish. ***11700***

BLUEMOON F1
60 Days. A stunning radish with lavender-blue exterior and flesh that is sure to draw attention from customers. A favorite from our trials, the roots are exceptionally tolerant to cracking and pithing, and have uniform conical shape. Sliced into salads, Bluemoon adds an unexpected pop of color. ***12770***

REDHEART
65 Days. A high-quality watermelon-type radish with beautiful pink-red interior flesh. The oval-round roots are white with a light green shoulder, and the juicy, crisp flesh is mild and resists pithiness in the summer heat. ***14073***

AMERICAN PURPLE TOP

90 Days. Large roots are purple above ground and creamy yellow below. Tops are big, and the necks are of medium size. Fine-textured and good eating quality, the flesh is creamy yellow in color. ***00900***

HELENOR ORGANIC

100 Days. This variety has excellent flesh quality and overall pleasant flavor. Early root development will achieve better coloring. Its medium top and fine globe shape make for a uniform plant and offer good storage for winter sales. ***12548***

ECHALION

CRÉME BRULEE F1

98 Days. The first shallot to win an AAS designation, this regional winner was chosen for its beauty and flavor. Single-centered 4-5" oblong bulbs have bright coppery-pink skin that is easy to peel, and a rosy interior with thick rings. Upright 2-3' plants mature early and are easy to grow. Echalions are known for their exceptional sugar profile and gourmet cooking quality, and Creme Brulee is an excellent example. Long storage potential. ***13114***

SHALLOT

MATADOR F1 ORGANIC

100 Days. This Dutch shallot has a broad obovate shape and is large in size. Producing twin bulbs from one seed, this amazing variety stores throughout the winter and can help extend CSA and market sales. ***12838***

CONSERVOR F1 ORGANIC

100 Days. An industry-leading French style shallot with excellent peeling and storage ability. Conservor has exceptional quality with a slight teardrop shape, deep pink flesh, and no skin between doubles. It is a long-day variety and can be stored between 8-12 months under proper conditions. ***13487***

SPINACH

SEASIDE F1

25 Days. Highly uniform, Seaside is an excellent choice for baby leaf and bunch market growers. The dark green spade shaped leaves are smooth and thick. Seaside's upright plants are slow to bolt and have high resistance to Downy Mildew (HR races 1-11, 15, 16; IR races 12, 14). ***12623***

SPACE F1 ORGANIC

40 Days. Medium-green leaves are smooth to slightly savoy with an upright habit for easy harvest. Suited to all growing seasons, Space is well adapted to a range of conditions, resists bolting, and has strong field-holding ability. High resistance to Downy Mildew (races 1-3, 5, 6, 8, 9, 11, 12, 14, 16, 19). ***13241***

SV2157VB F1

42 Days. SV2157VB is a semi-savoy spinach that has high resistance to Downy Mildew (races 1-13). It has uniform leaf shape and size, and medium savoy leaves. Its thick shiny leaves are very attractive and have a rich dark green color. SV2157VB is very adaptable across seasons and environments, and it offers great field holding and yield potential. ***11499***

ACADIA F1 ORGANIC

45 Days. Acadia is a dark green semi-savoyed spinach with medium- sized oval leaves and good texture for baby leaf harvest. Slow growing, tolerant to bolting and suited for spring, summer, and fall production. High resistance to Downy Mildew (races 1-13, 15, 16, 18). ***12954***

OLYMPIA F1

46 Days. Rather slow growing and extremely slow to bolt. The large deep green leaves are very durable for spring and summer harvest, and wash easily. High resistance to Downy Mildew (races 1-3). ***00765***

All-America Selections Winner · Grower Favorite · 2027 Introduction

SWISS CHARD

BRIGHT LIGHTS

55 Days. This AAS winner offers consistent growth rate and excellent quality of lightly savoyed green or bronze leaves with multicolored petioles. Expect variations of red, orange, gold, pink, purple and white petioles in this eye-catching mix that is suited to harvest at baby leaf and full maturity. Decorticated seeds. ***00833***

RAINBOW BLEND ORGANIC

25-55 Days. The beautiful mix of red, yellow, orange, pink and white stems have dark green, multi-colored veined savoy leaves which will add depth and texture to your greens mix. This variety can be enjoyed fresh or cooked. ***12382***

LARGE WHITE RIBBED

60 Days. With broad flattened white stems and thick tender leaves, this chard offers excellent quality. The leaves are smooth and easy to wash. ***00832***

PEPPERMINT

60 Days. A highly ornamental chard that boasts pure white petioles with vibrant pink streaks. Topped by dark green glossy leaves, plants have a very high resistance to bolting and perform well across multiple seasons. U.S. PVP 201100151. ***11163***

RHUBARB CHARD

63 Days. Large leaves are deep green with red veins. Both stems and leaves are delicious and make a striking market display. ***00834***

SQUASH

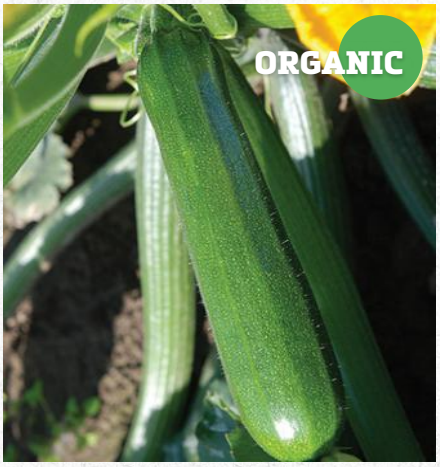

PAYLOAD F1

CASH MACHINE F1

GREEN MACHINE F1 ORGANIC

DUNJA F1 ORGANIC

SPINELESS SUPREME F1

SPINELESS PERFECTION F1

Culture: Any well-drained fertile soil will grow squashwith the proper management. As a group, squash are warm weather crops quite sensitive to cold temperatures, so wait for warm soil to plant. Planting pattern and area covered will depend on the bush/vining plant habit of the particular varieties you choose to grow. Floating row covers are often used to protect early season plantings. Plastic mulch can be used to raise soil temperature, conserve moisture and control weeds. Use supplemental water if plants start to wilt, and add bees for pollination. Finally, harvest carefully at peak maturity to avoid declining quality. Winter types that store well are best held at 50-55°F. and 50-75% relative humidity with good air circulation. Days to maturity are from direct seeding and for variety comparison only. **Avg. seeds/lb. refer to summer/winter squash charts.**

Special Note: This section has been ordered by *Days to Maturity* for your convenience. To view offering alphabetically, see pages 138 and 139.

GREEN ZUCCHINI

PAYLOAD F1

43 Days. This eye-appealing medium-green zucchini has a uniform cylindrical shape, shiny appearance, and light flecking. Its open plants and nearly spineless petioles lend to an easy harvest of high quality squash. Payload offers intermediate resistance to WMV, ZYMV, CMV and PM. ***11965***

GREEN MACHINE F1 ORGANIC

44 Days. This high yielding widely adaptable variety offers 7-8" uniform medium green fruit with light flecking. Harvest is easier with this strong open plant that has intermediate resistance to WMV, ZYMV, CMV, and PM. ***12205***

SPINELESS SUPREME F1

44 Days. The third introduction to the Spineless Zucchini series, Spineless Supreme has the same spineless traits as Spineless Beauty and Spineless Perfection with an improved disease package. Strong yields of uniform glossy medium-dark green fruit with moderate flecking are produced on plants with intermediate resistance to WMV, ZYMV, CMV, and PM. ***12766***

CASH MACHINE F1

45 Days. High quality medium dark green zucchini have light flecking and a small blossom scar. Compact upright plants make it the best choice for high tunnels and for double row plantings in the field. Intermediate resistance to WMV, ZYMV, CMV, and PM. ***12909***

DUNJA F1 ORGANIC

45 Days. Shiny, finely flecked, dark green fruit are produced in high yields on vigorous plants. The compact plants offer an open habit for easy harvest and have been known to perform well in protected culture with moderate parthenocarpy. Intermediate resistance to PRSV, WMV, ZYMV, and PM. ***12706***

SPINELESS PERFECTION F1

45 Days. Upright open plants have spineless petioles and a good disease package to ensure strong continuous yields of high quality fruit. The medium-green fruit have slightly more flecking than Spineless Beauty and have a unique stem characteristic that allows for easy harvest with minimal broken fruit. Intermediate resistance to WMV, ZYMV, and PM. ***11796***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

The standard early for quality and yield.

ZUCCHINI ELITE F1

48 Days. An extra-early hybrid with a classic cylindrical shape, Zucchini Elite's slim fruit have a lustrous sheen and are best when picked 7-8" long. Its open plant habit makes picking easy, and the yields are incredible. ***00828***

RESPECT F1

49 Days. Easy to pick, open plants produce high quality, medium dark green zucchini. The cylindrical fruit have light flecking and are less prone to bulbing than other zucchini. The plant has reduced spines for a cleaner harvest and offers good yield potential. Intermediate resistance to PRSV, WMV, ZYMV, and PM helps to ensure good yields. U.S. Patent 8,536,411. ***12330***

REWARD F1

49 Days. This early high yielding zucchini offers intermediate resistance to WMV, ZYMV, CMV, and PM. Its medium-dark green 8" fruit are lightly flecked, have a straight to slightly tapered shape, and bear a small blossom end scar. The open plant makes for easy harvest, and it is well adapted to double row planting. ***11780***

TIGRESS F1

49 Days. Virus protection and high yields of quality fruit make Tigress a winner. This early maturing hybrid produces smooth medium green fruit that closely resemble Zucchini Elite. The plant offers good cover but is not too dense, allowing for easy harvest. With intermediate resistance to WMV and ZYMV, Tigress offers high yields late into the season when disease pressures increase. ***00799***

OUTLAW F1

50 Days. A highly productive medium-dark green zucchini with light flecking and excellent quality. The plants have an open and upright structure and minimal spines for ease of harvest and reduced scarring, and a strong disease resistance package for better field performance. Intermediate resistance to PRSV, WMV, ZYMV, and PM. ***13578***

SPINELESS BEAUTY F1

50 Days. The spineless petioles of this variety make it a popular choice due to ease of harvest and reduced fruit damage. Spineless Beauty produces large yields of uniform straight cylindrical fruit that are medium green and moderately flecked. ***00804***

TRIBUTE F1

50 Days. A medium dark green zucchini with light flecking and strong fall virus protection perfect for the late summer or early fall planting slot. Well suited to double row plantings, Tribute has a compact plant with an open habit and reduced spines for easy harvest. A strong performer with potential for 30% greater yields than other varieties in the fall slot. Intermediate resistance to PRSV, WMV, ZYMV, and PM. ***12899***

GOLDEN ZUCCHINI

YELLOWFIN F1 ORGANIC

47 Days. Beautiful deep yellow color is expressed best in cooler conditions and carries up into the peduncle. The plant habit is open and semi-spineless for easy picking. Pick daily for continuous yields and longer lasting plants. Intermediate resistance to CMV and PM. ***12829***

GOLDEN GLORY F1

50 Days. Upright open semi-spineless plants make for quick harvest of blemish-free fruit. An excellent disease package enables the high- yielding plants to produce over a longer period. The 7-8"L x 1¾"D fruit turn a medium-dark yellow color. Plants carry intermediate resistance to WMV, ZYMV, and PM, and have moderate parthenocarpy. ***12204***

GOLDEN ROD F1

51 Days. This variety produces attractive long slim cylindrical fruit with rich golden skin and a pale yellow interior. Golden Rod is a precocious yellow variety, with reduced incidence of green ends and less visible symptoms of virus on the fruit. It has a very high yield potential and an open plant for easy harvest. ***01829***

SPECIALTY SUMMER SQUASH

EIGHT BALL F1

42 Days. The first ball-shaped zucchini with a true zucchini color. Fruit have an attractive shiny flecked dark green exterior color with typical zucchini flesh. They are some of the earliest to mature in the field, and good yields are noted on strong open bush plants. ***00820***

LEMON SUN F1

45 Days. Vigorous bush plants set high yields of this sweet and tender yellow patty pan squash. The uniform scalloped fruit are bright yellow with no green on the blossom end and are best harvested when 4" wide or smaller. Baby fruit can also be picked with the flower still attached. Lemon sun is also a great choice for squash blossoms, setting a high number of male flowers. ***13494***

EIGHT BALL F1

LEMON SUN F1

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

MEXICANA F1 ORGANIC

48 Days. A gray zucchini with early uniform gray-green fruit that is tender with a nutty flavor. The fruit are slightly bulbed with a bright glossy look that holds well. Plants are strong yielding with an upright open habit for easy harvest and a strong disease package. Intermediate resistance to PRSV, WMV, ZYMV, CMV, PM, and SLCV. ***13404***

Y-STAR F1 ORGANIC

50 Days. This variety produces shiny, golden yellow scalloped fruit with small green circles on the blossom end (appearance will vary under different environmental conditions). Pick small at the 2-4" stage before seed development for a tasty summer squash flavor with a hint of nuttiness. Eat raw in salads or grilled. If left on the vine, fruits will develop a hard shell. ***12425***

BENNING'S GREEN TINT

52 Days. Vigorous bushy plants produce very good yields of pale green squash with scalloped edges. Harvest fruit when they are 2-3" in diameter for best color, excellent flavor, tender skin, and firm texture. ***11967***

SUPERSONIC F1

GRANDPRIZE F1

SMOOTH SUMMER F1

DELTA F1

LIONESS F1

MULTIPIK F1

SMOOTH OPERATOR F1 ORGANIC

SUPERPIK F1

YELLOW SUMMER SQUASH

SUPERSONIC F1

40 Days. Supersonic is an extra-early, yellow straightneck with an extremely high yield potential and continuous setting ability. Bush plants produce attractive fruit that are best harvested at 5-6" in length. Supersonic has the precocious yellow gene, which gives the fruit a yellow stem and the ability to mask the greening symptoms of WMV and CMV. ***12207***

GRANDPRIZE F1

42 Days. Reliable yields of high quality 6-7" fruit are to be expected of this green-stemmed glossy deep yellow straightneck. Erect semi- open plants have reduced spines and an enhanced disease package, including WMV, ZYMV, and PM. Fruit are less likely to show scarring, resulting in higher marketable yields and quality. ***12629***

SMOOTH SUMMER F1

42 Days. Upright plants perform best in early season plantings, offering the potential for early male flowers and increased productivity. The deep yellow glossy fruit have a consistent bulbed shape and are easy to pick from spineless plants. Intermediate resistance to PM. ***13329***

DELTA F1

48 Days. This very productive yellow semi-crookneck squash offers high resistance to PM. The bright yellow fruit have green stems, strong curved necks, and smooth bulbs at the blossom end. The vigorous bush plant offers good protection to the fruit, and stems twist easily from the plant for quick harvest. ***11212***

LIONESS F1

50 Days. Lioness is a green-stemmed yellow straightneck that has intermediate resistance to PRSV, WMV, ZYMV and CMV. The medium-sized plant offers good yields of straight fruit that have a medium-sized bulb at the blossom end. **Note:** Young fruit will have a noticeable green cast that will partially disappear as the fruit ripen. Mature fruit may show a very light green cast. ***00768***

MULTIPIK F1

50 Days. A very high yielding straightneck squash of excellent quality that is early and prolific. Pick the smooth bright yellow fruit at baby squash or at market size to meet the demands of any customer. The precocious yellow gene lends Multipik its early yellow color and stems, as well as masking the symptoms of WMV and CMV that can turn fruit green. Multipik has been known to exhibit moderate parthenocarpy. Keep plants picked to achieve the highest yields. ***00810***

SMOOTH OPERATOR F1 ORGANIC

50 Days. Smooth, bright yellow straightneck squash are produced on an upright, open plant that is spineless, making harvest a breeze. Growers can expect high yields of slim, refined 6-7" fruit. High resistance to PM. ***13930***

SUPERPIK F1

50 Days. This precocious yellow squash is very similar to Multipik except for a notable difference in neck length. Superpik's slightly elongated fruit are perfect for markets that demand a longer straightneck with clean market appearance. The precocious yellow gene masks the greening caused by WMV and CMV, and gives the fruit a yellow stem. ***00778***

BUTTERNUT SQUASH

BETTERNUT 900 F1 3 LBS.

80 Days. A great choice for the boxing market, the semi-bush plants produce 3 lb. fruit that are 8-9" long. The uniform fruit have good flesh color and a light tan rind color. Intermediate resistance to PM. ***12344***

AVALON F1 3-4 LBS.

88 Days. This butternut has shown outstanding yield potential and uniform size and shape. The tan fruit are produced on strong full-size vines, average 5" in diameter by 11" in length, and weigh 3-4 lbs. Avalon has a fine grained orange flesh and can be used for fresh market sales, processing or the peeling market. ***11768***

BUTTERFLY F1 3½ LBS.

90 Days. Tan fruit average 3½ lbs., are produced on space-saving semi-bush plants, and receive high marks for their uniform size and shape. Butterfly has a traditional butternut shape, above average neck thickness for its size, and fine grained flesh with good orange color. Intermediate resistance to PM. ***11766***

ESSEX F1 3-4 LBS.

95 Days. The deep orange flesh of this large 3-4 lb. fruit has exceptional butternut flavor and sweetness. With intermediate resistance to PM and the vigor and yield of a hybrid, Essex is a strong performer in all conditions. ***12949***

HAMILTON ORGANIC 2-3 LBS.

95 Days. An open pollinated butternut selected and produced in New England, Hamilton's unique deep orange flesh has exceptional but ternut flavor, high sugars and an abundance of flesh. Fruit size averages 2-3 lb. Intermediate resistance to PM. ***12828***

WALTHAM BUTTERNUT 4 LBS.

97 Days. This long-time favorite has 8-10" long fruit with thick cylindrical necks and creamy-tan slightly ridged skin. Its flesh color is richer than others, and the fruit have better storage. A heavy yielder, Waltham Butternut shows remarkable uniformity, with a low occurrence of slim or crooked necks. ***00825***

ATLAS F1

HONEYNUT

BUTTERNUT SQUASH (CONT.)

BUTTERBABY ½-1 LB.

100 Days. A mini butternut with tan skin and sweet dark orange flesh. High yields of ½-1 lb. fruits are produced on vines with high resistance to PM. Butterbaby fruit measure 6"L x 4"W, are flavorful and sweet (9-11% Brix), and offer better storability than other mini butternuts. Good heat set. ***12687***

BUTTERKIN F1 2-4 LBS.

105 Days. This flat scalloped-shaped butternut cross has very dark sweet flesh and smooth texture. The 2-4 lb. fruit are versatile for cooking and baking, making this squash a great addition to CSA offerings. ***12447***

NARRAGANSETT F1 5-6 LBS.

105 Days. An excellent variety for the fresh peeling or processing markets. The tan fruit have thick uniform necks and a slight bell-shaped bulb, and the rich orange flesh has very high eating quality. The full-size vines have excellent yield potential and intermediate resistance to ZYMV and PM. ***12128***

POLARIS F1 3-5 LBS.

105 Days. A uniform, medium-sized butternut with smooth tan skin, bright orange flesh, and tolerance to cracking. Vigorous plants yield high numbers of 3-5 lb. fruit and carry intermediate resistance to PM. Excellent for fresh and processing markets. ***13586***

QUANTUM F1 2½-4½ LBS.

105 Days. Quantum sets strong yields of 2½-4½ lb. smooth tan fruit with a thick neck and tolerance to cracking. The small seed cavity, bright orange flesh, and great flavor make it excellent for fresh market use. Vigorous vines have high resistance to PM. ***12813***

ATLAS F1 5-7 LBS.

110 Days. Atlas produces uniformly sized and shaped fruits that are cylindrical with a slight bulb, perfect for peeling or processing. Cream colored fruit have dark orange flesh and weigh 5-7 lbs. Medium vines permit higher plant populations and boost yields. Good heat set. ***11786***

HONEYNUT 1-1½ LBS.

110 Days. Honeynut produces mini butternut squash on vining plants. The 5" long fruit weigh 1-1½ lbs. and have a very sweet, rich flavored deep orange flesh. The rind ripens to a deep burnt orange color. Good heat set. ***11237***

ACORN SQUASH

GOLDILOCKS F1

70 Days. This bright orange acorn has a rich nutty flavor great for cooking, but can also double as a decorative squash. The vigorous plants can yield over 10 fruit each and have Powdery Mildew protection. ***13288***

TABLE ACE F1

78 Days. The fruit of this acorn squash offer excellent black-green skin color and thick bright orange flesh that is smooth and delicious. Its semi-bush vines are quite compact and produce high yields of delicious 1 lb. squash in a limited space. Stores well. ***00823***

AUTUMN DELIGHT F1

80 Days. An excellent large-fruited acorn squash, Autumn Delight's vigorous semi-bush plants produce strong early yields of dark green fruit that weigh an average of 1½ lbs. Grower feedback rates it high for fruit quality, and it stores well for late fall and winter sales. Intermediate resistance to PM. ***11797***

TABLE SUGAR F1 ORGANIC

80 Days. Table Sugar produces high yields of dark green acorn squash with an outstanding roasted chestnut flavor. The orange- yellow interior boasts high soluble solids and an extremely sweet taste. This 1 lb. personal size squash is just right for the single serve market. High resistance to PM. ***12429***

BAKED POTATOES F1

90 Days. Tan fruit weighing 1-1½ lbs. are produced in abundance on bush type plants. The sweet flesh is off-white in color with a typical acorn texture. Immature fruit will start off white and mature to a tan color. ***12343***

MASHED POTATOES F1

90 Days. This variety is an excellent choice for customers seeking a low-carbohydrate diet. When baked and seasoned with garlic and butter, the nearly white flesh offers the look and consistency of mashed potatoes. The 1½ lb. squash hold their bright white rind color late into fall and are produced in high numbers on a restricted vine. ***12208***

BUTTERCUP SQUASH

BONBON F1

85 Days. This delicious buttercup squash grows on space-saving, upright, semi-bush plants. It is a full week earlier to mature than most other buttercup types, and its thick orange flesh is very sweet and creamy when cooked. Intermediate resistance to PM. ***00783***

AUTUMN CUP F1

95 Days. High quality sweet deep-orange flesh is expected from Autumn Cup. Compact semi-bush plants produce an abundance of large dark green fruit that have smaller "buttons" at the bottom of the fruit. Developed in conjunction with Dr. Brent Loy at the University of New Hampshire. ***00817***

BUTTERCUP BURGESS

100 Days. One of the highest quality squashes available. Extra rich and sweet in flavor, the deep orange flesh is firm and smooth. Blocky 6-8"W x 3½-4"L dark green fruit have a small grey "button" at the blossom end and grow on a full vine. The Burgess strain is an excellent buttercup to grow for long-term storage and repeat sales. ***00773***

HONEYBOAT DELICATA ORGANIC

DELICATA

SWEET DUMPLING

RED OCTOBER F1

BLUE HUBBARD

BLUE MAGIC F1

DELICATA & SWEET DUMPLING SQUASH

BUSH DELICATA

80 Days. This improved Delicata squash offers two major advantages over older strains: compact 3-4' vines and high resistance to PM. The space-saving vines bear cylindrical, 8" long fruit with smooth bright yellow-orange flesh. Also known as sweet potato squash for its distinctive, very sweet nutty flavor, Bush Delicata was developed by Cornell University. P.V.P. ***01823***

CELEBRATION F1

80 Days. Celebration is a light-yellow squash with orange sutures and attractive flecking. The 1½ lb. fruit offer exceptional eating quality and flavor. Plants have intermediate resistance to PM. Market Celebration as a unique edible or decorative squash. ***12620***

CARNIVAL F1

High quality & unique color

85 Days. Medium-sized fruit are produced near the crown of semi-bush plants for easy picking. The skin is uniquely flecked with shades of green, gold and yellow, giving each fruit a different appearance. Carnival stores in fine condition for many months with excellent eating quality. *Note: Color expression is temperature sensitive. Carnival will have less yellow and more green flecking in high temperatures.* ***00774***

HONEYBOAT DELICATA ORGANIC

90 Days. These coppery tan fruits with green stripes are very sweet and just the right size for roasting, single servings, or for the restaurant trade. The flesh of this unusual colored Delicata is high in calcium, potassium, folate and vitamins A & C. The fruits average 1 lb. each and are sweet straight from the field. It is a reliable winter squash that stores better than the standard Delicata. ***12427***

DELICATA

100 Days. This unique winter squash produces elongated 7-9" fruit with a creamy colored skin, striped and flecked with green. Distinctively sweet fruit are borne on semi-spreading vines and store short term. Delicata requires no curing and is recommended for stuffing or baking. ***00789***

SWEET DUMPLING

100 Days. Small 4-5" fruit are attractively colored with ivory and green. Ideal for single servings, the sweet tender orange flesh will delight your customers. Medium size vines produce fruit that store for 3-4 months. ***00797***

HUBBARD SQUASH

RED OCTOBER F1

90 Days. This fantastic bright red-orange hubbard is the perfect size for today's markets. Full vines yield 5-6 lb. strikingly colored fruit with great uniformity. Red October is a must have item for ornamental displays, but is also a high quality winter squash, with sweet fine-grained flesh. ***11985***

BLUE HUBBARD (STANDARD)

100 Days. The original strain of the high quality hubbard squash. Although smaller than the New England strain, it still produces classic hubbard-shaped fruit that measure 12"L x 7"W. The 7-10 lb. fruit have a blue-gray rind and sweet fine textured orange flesh. ***00780***

BLUE MAGIC F1

100 Days. Blue Magic is a 4-6 lb. hubbard squash with the same great eating qualities as a normal size hubbard. Fruit are produced on semi- vining plants and have the typical blue-gray rind color and fine-grained, tasty flesh found with standard Blue Hubbard squash. ***11791***

BLUE HUBBARD (NEW ENGLAND STRAIN)

110 Days. This select strain of Blue Hubbard is the largest of the hubbard-type squash. Full vines yield blue-gray fruit that weigh 30-45 lbs. and have a classic hubbard shape. The fruit can get up to 20-30" long and its high quality orange flesh has a sweet fine-grained texture. ***00770***

SEE PAGE 146
for winter squash prices

SPAGHETTI SQUASH

ORANGETI F1 ORGANIC

70 Days. Plants produce 2 lb. fruits with an orange interior flesh that matches the exterior skin color. Once cooked, fine strings resembling spaghetti pull from the interior. ***12426***

SMALL WONDER F1

90 Days. Attractive 1½-2 lb. yellow-orange squash have a very uniform blocky oval shape with very good storing ability and shelf life. The pale-yellow flesh has excellent flavor and quality stranding. Space-saving compact vines are highly productive. ***01821***

PRIMAVERA F1

93 Days. This very uniform high yielding 2½-3 lb. squash produces a nice canary-yellow skin color at maturity. Its restricted vine allows for a more concentrated fruit set. When compared to the standard OP variety, Primavera really stood out in our trials. ***11029***

TIVOLI F1

98 Days. The first national All-America Selections bush-plant spaghetti squash winner. With a small bush habit, plants offer a high yield potential and are space-saving. Fruits are large and oval, weigh 4-5 lbs., and have creamy flesh that is very easy to shred with a fork after roasting. ***12485***

VEGETABLE SPAGHETTI

110 Days. 8-10" oblong fruit produce lightly sweet, spaghetti-like strands of flesh. Vegetable Spaghetti's rind turns yellow when ripe, and fruit keeps well for several months. ***00826***

KABOCHA SQUASH

SPECKLED PUP F1

85 Days. Mini Kabocha 1½ lb. deep-oblate shaped fruit grow on space-saving semi-bush vines. Deep green fruit are covered with red-orange speckles, and have a sweet dry flesh. Intermediate resistance to ZYMV and PM (race 2). ***11773***

SWEET MAMA F1

85 Days. This AAS-winning kabocha is early to mature and has a space-saving bush plant habit that lends itself well to closer spacing. The deep green skin has light green streaks, and the flesh is bright yellow and very sweet. Each plant sets 2-3 flattened fruit that weigh 4-4½ lbs. and store well. ***12814***

DELICA F1

90 Days. Delica is a high quality squash with dry flesh that gets sweeter in storage. Vigorous full vine plants produce good yields of blocky fruit that are dark green in color, with thin light green stripes and flecks. Delica's deep golden flesh has a rich, slightly nutty flavor, and is very fine grained. The fruit can weigh up to 5 lbs. and store for many months in peak condition. ***11245***

SUNSHINE F1

98 Days. Sunshine has a sweet nutty tasting flesh that is completely smooth and stringless. Its bright red-orange rind with thin tan stripes will add color and interest to fall squash displays. Vigorous vines average 8' and produce very good yields of the 3-4 lb. flat-round shaped fruit. ***00861***

SPECKLED PUP F1

SWEET MAMA F1

DELICA F1

SUNSHINE F1

All-America Selections Winner · Grower Favorite · 2027 Introduction · Good for Protected Culture

PINK PANTHER F1
100 Days. This light pink hybrid kabocha squash is excellent for decoration or eating. The thick bright orange flesh is high quality and sweet, and the uniform flattened shape and unique color make a seamless addition to the top of pumpkin stacks. Full vines set strong yields of fruit with consistent size. ***13293***

SPECIAL EXPORT F1
100 Days. Special Export is a hybrid Kabocha that averages 3-4 lb. in weight. Its vigorous full vine produces high yields of uniform dark green fruit that have a slightly flattened appearance. Its dry orange flesh has very good sweetness and a flavorful taste. Good storage allows growers to sell high quality winter squash late into the winter months. ***12209***

SPECKLED HOUND F1
100 Days. Blocky fruit have an unique peach color with green and blue-green splotches. The thick yellow-orange flesh is very tasty, with a dry texture similar to a buttercup squash. Intermediate resistance to ZYMV. ***11772***

SPECIALTY WINTER SQUASH

QUEENSLAND BLUE
95 Days. This dark blue-green ribbed pumpkin-like squash produces 8-10 lb. fruit with very thick meaty sweet orange flesh that is excellent for cooking. Use for fall decoration and then store in a cooler or root cellar for winter use. ***12428***

NORTH GEORGIA CANDY ROASTER
95 Days. This unique heirloom variety is sure to please! Vigorous vines produce distinctive pink fruit that weigh around 10 lbs. and can reach up to 18" long. Banana-shaped fruit develop a greenish-blue blossom end when ripe, have deep orange colored flesh and are delicious. Excellent for use as an ornamental variety for fall displays or for use in pies, baking and canning. ***13642***

AUTUMN FROST F1
100 Days. Uniquely ribbed, round fruit ripens to dark tan with a frosted overlay. Flesh is similar to butternut with superior flavor, quality, and storage of up to 4 months. Prepare by cutting lengthwise for roasting or cut the top 2" to stuff and bake upright. Semi-vines have intermediate resistance to Powdery Mildew. ***12961***

RED KURI
100 Days. This highly selected strain of Red Kuri offers impressive yields of uniform 2-3 lb. fruit. Red Kuri is a Japanese squash that has deep red-orange skin and smooth dry flesh with a sweet nutty flavor. Yields well even in cool areas or short seasons. ***13579***

SWEET MEAT
103 Days. This distinctive old-time favorite has a loyal following throughout the country. Consumers enjoy the smooth, fine texture of its golden-yellow flesh. Medium-sized fruit average 10-15 lbs. and the flesh is extra-thick. Round and flattened with a hard slate-gray skin, these high quality squash keep for many months in storage. ***00819***

GREEN STRIPED CUSHAW
110 Days. Large bulb-shaped fruits with curved necks can weigh up to 40 lbs. Large vines produce creamy-white fruit mottled with green stripes, and light yellow flesh that is slightly sweet, thick, medium-coarse, and fibrous. Great for pies and baking. ***11769***

TOMATOES

Germination: Tomatoes are generally started in greenhouses about 6 weeks before transplanting outdoors. For optimum germination, start seeds at a soil temperature between 75-85°F, using a soil thermometer to monitor soil temperature. Seeds can be started in germination row trays and transplanted into larger plug trays once they develop their first true leaves. Tomato seeds can also be direct sown into 50 cell or 84 cell plug trays. Consider building your own germination chamber to increase germination rates and consistency.

High Tunnel: Start seedlings for high tunnel use following the guidelines above. To achieve larger transplants, many growers will transplant seedlings into 3½" pots. Schedule approx. 8-10 weeks prior to transplanting to allow transplants to reach a larger size. General spacing in high tunnels is 16-18" in row and 48" between rows.

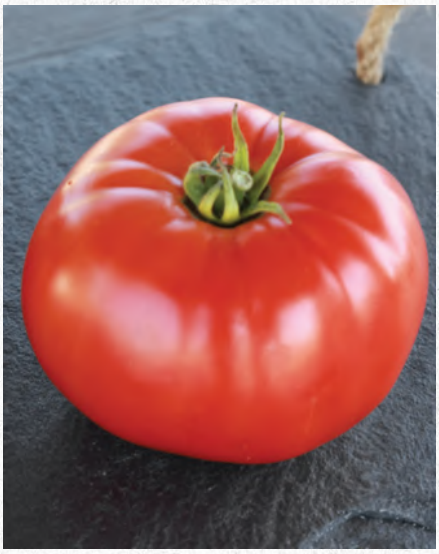

Fertility: Soil testing is invaluable when determining a fertility plan. When sending in your soil sample, be sure to note tomatoes as the intended crop. Test results often include recommendations tailored for the crop and production situation. High tunnel growers commonly collect foliar samples for nutrient testing, allowing them to closely monitor nutrient levels and ensure high yields. Check with your State or Local Extension service for Soil and Nutrient testing programs.

Disease Control: Utilize the Extension service within your state to determine what diseases are affecting tomato crops in your area. When selecting varieties, carefully read the descriptions and quick reference charts to determine the best disease resistance package for you. For easy comparisons, see the Tomato Quick Reference Chart, on page 164. Well-timed applications of fungicides appropriate for the crop and pathogen can reduce crop loss from disease.

Staking: Staking tomatoes provides numerous benefits. Staking reduces disease pressure by increasing air flow within and around plants, and keeping plants and fruit from directly contacting the ground. It also makes overall crop management and harvesting more efficient. Growers commonly use the Florida Weave Technique supported by 1" x 1" wooden stakes, placed every second plant. This method uses twine to support the plants at multiple intervals as they grow. For best results, first stake tomatoes when they reach about 1' in height, and add additional layers of twine approximately every 4-8" as the plants grow.

GTO F1

PRIMO RED F1

RAMBLER F1

Special Note: This section has been ordered by *Days to Maturity* for your convenience. To view offering alphabetically, see page 164.

HYBRID DETERMINATE TOMATOES

ROADSTER F1

67 Days. This early variety has high yield potential of extra-large 8-12 oz. fruit with exceptional flavor and interior color. Firm, smooth-shouldered fruit have a concentrated set on healthy, well- adapted plants with a strong resistance package. An exceptional choice for the first early slot, Roadster is suited for mature green and vine ripe markets. A must-try for any roadside market grower. High resistance to Al, F1, F2, F3, and Vt, and intermediate resistance to TSWV and St. ***12997***

PRIMO RED F1

Excellent for high tunnels

68 Days. Primo Red has become an early season workhorse for growers nationwide. It produces smooth, deep globe-shaped, large to extra-large fruit on compact determinate plants. The fruit have deep red color, good firmness, and very good eating quality. With impressive flavor, size, and yield, Primo Red is an excellent vine ripe tomato for early plantings. High resistance to F1, F2, Vt (races 1,2), and ToMV, and intermediate resistance to TSWV. Note: Crown set can have pronounced pointed blossom ends. This has not been a concern for growers of Primo Red. ***11841***

GTO F1

70 Days. This determinate tomato combines flavor, size and earliness with the deep red color of the Crimson gene to provide growers with a strong option for the early planting slot. Extra-large, globe shaped fruit are firm and smooth and are produced on plants that do not require pruning. GTO has a strong disease package making it a great variety for protected culture or open field production. High resistance to F1, F2, ToMV (races 0-2), Vt 1 and intermediate resistance to St. ***13495***

RAMBLER F1

70 Days. Extra-large deep oblate fruit are smooth, firm, and dark red, excellent quality for both vine ripe and mature green markets. The adaptable determinate plants have good setting ability and size across different planting slots and perform best with light to no pruning. Fruit average 8-12 oz. High resistance to Al, F1, F2, F3, For, and Vt and intermediate resistance to TSWV and St. ***13440***

for large fruited tomato prices

All-America Selections Winner · Grower Favorite · 2027 Introduction · Cream of the Crop Tomato · Available as Plug & Liner · Late Blight Resistant

STM2255 F1

70 Days. Firm scarlet red fruit are large to extra-large in size, with great vine-ripe flavor and good shelf life. Expect high yield potential of smooth, deep-oblate 8-12 oz. fruit on determinate plants that have proven to be very versatile and adaptable across multiple slots and growing regions in the Eastern US. Plants are medium-tall and benefit from pruning. High resistance to Al, F1, F2, For, and Vt, and intermediate resistance to TSWV, TYLCV, and St. ***13332***

STM2255 F1

MAVERICK F1

72 Days. A high-yielding determinate beefsteak tomato suitable for open field and protected culture, Maverick has impressive color, flavor, and high lycopene content from the Crimson gene. The round fruit are large (9 oz.) with a smooth shoulder and small blossom scar. High resistance to F1, F2, F3, For, ToMV, and St and intermediate resistance to TSWV, TYLCV, RN, LB, TLM, and PM. ***13439***

MAVERICK F1

RED DEUCE F1

Excellent for high tunnels

72 Days. This second-early variety offers a first-rate way to follow Primo Red. The determinate plants produce outstanding yields of large to extra-large fruit with very good eating quality. The globe- shaped fruit ripen uniformly to a deep red color for great eye-appeal. Red Deuce lends itself well to stake cultivation and has high resistance to Al, F1, F2, Vt, and TMV. A favorite of Harris customers and a consistently reliable performer. ***11886***

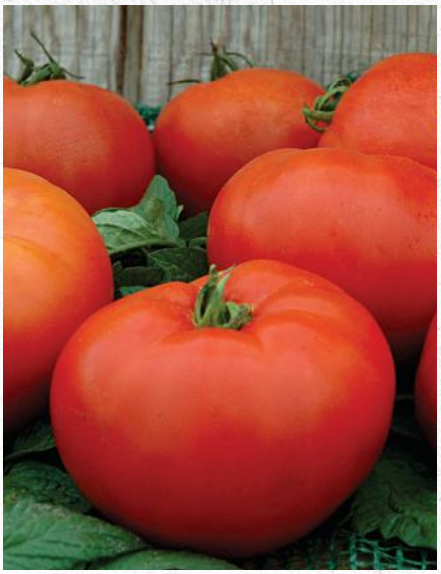

RED DEUCE F1

RED MOUNTAIN F1

Excellent for high tunnels

73 Days. Red Mountain's unique disease package and high quality fruit make it an excellent choice for both Northern and Southern growers. This second-early variety is one of few with protection against Fusarium Wilt, Nematodes, and Tomato Spotted Wilt Virus, making it valuable for both open field and high tunnel production. Red Mountain's determinate plants produce high yields of remarkably uniform deep round fruit. Full tomato flavor and deep red color add to Red Mountain's appeal. High resistance to F1, F2, F3, Vt, and intermediate resistance to TSWV and Nematodes. ***11264***

RED MOUNTAIN F1

SCARLET RED F1

73 Days. This fresh market shipper offers the firmness and fruit quality of Florida 47 R along with much improved flavor. Scarlet Red produces high yields from vigorous determinate plants and performs well for either mature green or vine-ripe harvest. The 10-13 oz. deep red extra-large fruit have appealing scarlet interiors, excellent firmness, and long shelf life. High resistance to Al, F1, F2, Vt, and intermediate resistance to St. ***11849***

SCARLET RED F1

BLACK ANGEL F1

75 Days. Determinate plants yield beautiful "black" beefsteak tomatoes with excellent flavor and size. The medium-large fruit weigh 8-10 oz. and have both the Crimson gene and a green-flesh trait that combine to produce a striking dark color. Black Angel gives heirloom appeal with cleaner fruit and an exceptional disease package. High Resistance to Al, F1, F2, F3, Vt, ToMV, and St, and intermediate resistance to RN, LB, TSWV, and TYLCV. ***13961***

BLACK ANGEL F1

BENDIDA F1

MOUNTAIN MERIT F1

CAROLINA GOLD F1

RED BOUNTY F1

GALAHAD F1 ORGANIC

MOUNTAIN FRESH PLUS F1

HYBRID DETERMINATE TOMATOES (cont.)

BENDIDA F1

75 Days. A productive semi-determinate tomato that sets beautiful glossy deep orange fruit. The firm round fruit weigh 6-7 oz. and have excellent flavor and high levels of beta carotene. Plants perform well in open field and protected culture and carry intermediate resistance to F1, F2, Vt, and TMV. ***13251***

CAROLINA GOLD F1

75 Days. Carolina Gold features unique yellow-gold colored fruit that are low in acid and uniform ripening. This strong adaptable determinate plant produces mostly extra-large and large fruit throughout the season. To maximize yield potential, stake culture is recommended. High resistance to F1, F2, and Vt. ***11880***

GALAHAD F1 ORGANIC

75 Days. Renowned for being the most perfect knight of King Arthur's Round Table, we agree that the name is a match for this variety. Galahad is a productive plant that boasts high yields of uniform, flavorful 12 oz. fruit with a disease package that stands up to the worst pathogens. Great for protected culture or open field production. Intermediate resistance to F1, F2, F3, Vt, TSWV, St, RN, and LB. ***12831***

MOUNTAIN MERIT F1

75 Days. Mountain Merit is a medium-large 8-10 oz. tomato produced on a determinate plant with high resistance to Late Blight. The deep red firm fruit are produced on adaptable plants that also have high resistance to F1, F2, F3, Vt, St and RN, and intermediate resistance to TSWV and LB. ***11758***

RED BOUNTY F1

Good heat set

76 Days. This large to extra-large fruited variety offers a reliable disease package that allows it to thrive where other varieties suffer. It is an excellent choice for areas threatened by TSWV, as it offers high resistance to this devastating disease. Red Bounty's globe-shaped deep red fruit ripen uniformly and offer great eating quality. The large determinate plants protect fruit well and offer high resistance to F1, F2, Vt, TSWV, St and RN. ***11904***

MOUNTAIN FRESH PLUS F1

78 Days. For years, growers have counted on Mountain Fresh Plus to produce high yields of quality fruit, even in the presence of Nematodes. Large determinate vines offer good cover and produce strong yields of extra-large fruit that are smooth and firm with clean shoulders and excellent uniform red color. High resistance to F1, F2 and Vt, and intermediate resistance to RN. ***00907***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Cream of the Crop Tomato · Available as Plug & Liner · Late Blight Resistant

HYBRID INDETERMINATE TOMATOES

RUBEE DAWN F1

57 Days. Compact indeterminate plants yield 8-12 oz. deep-oblate fruit with slightly curved shoulders and deep red color. The large firm fruit are excellent for slicing with beautiful internal color and well-balanced mild flavor. Plants perform well in open field and protected culture and have an exceptional disease resistance package. High resistance to AI, F1, F2, Vt, ToMV (races 0-2), St, RN, and TLM (races A-E). ***13171***

BUFFALOSUN F1

70 Days. This large 18-24 oz. beefsteak tomato offers beautiful yellow fruit with red flames throughout. The meaty fruit have the look and flavor of an heirloom with improved texture, yield, and holding ability, and reduced cracking. The strong disease resistance package allows for season-long harvest of remarkable fruit. High resistance to F1, F2, F3, and Vt, and intermediate resistance to TSWV and Late Blight. ***12999***

CONTESSA F1 ORGANIC

72 Days. A large indeterminate red beefsteak tomato with a disease package suited to both open field and protected culture, Contessa is a strong alternative to Bigdena. Contessa carries the Crimson gene, giving the slightly ribbed 10 oz. fruit a deep red color, good flavor, and high lycopene. Strong productive plants set reliable yields and carry high resistance to AI, F1, F2, F3, Vt, ToMV, and St, and intermediate resistance to TSWV, TYLCV, LB, TLM, and PM. ***13853***

DARKSTAR F1

72 Days. DarkStar is an exceptional purple beefsteak tomato for open-field growing, with high yield potential, heirloom flavor, and hybrid disease resistance that includes Late Blight. The oblate ribbed fruit average 8-10 oz. and the vigorous indeterminate plants perform best in-ground with added support. High resistance to Vt and LB. ***13437***

LOKI F1

72 Days. This early maturing round slicer has excellent fruit set and yield potential. The indeterminate plants perform best in-ground in either field or protected culture, with a strong disease package that includes Leaf Mold resistance. The dark red fruit are smooth and flavorful with great internal quality and small stem and blossom scars. Fruit average 6-8 oz. but have shown to be larger in high tunnel settings (7-11 oz.). High resistance to F1, F2, TMV, ToMV, RN, TLM. ***13436***

BLUSHINGSTAR F1

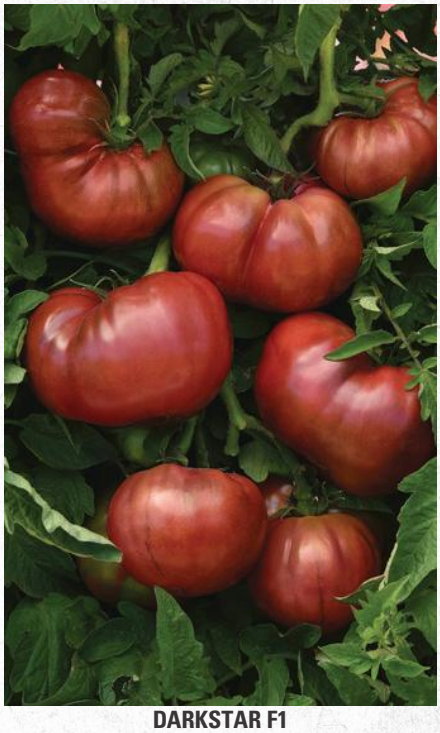

75 Days. An indeterminate pink beefsteak tomato with early maturity, excellent flavor, and a strong disease package. BlushingStar has heirloom tomato appearance and flavor with the higher yield and cleaner fruit expected of a hybrid. The 12-16 oz. fruit are oblate and ribbed with few blemishes. High resistance to LB and SLS. ***13581***

DAMSEL F1 ORGANIC

73 Days. This pink slicing tomato combines traditional heirloom flavor with good yields of 12 oz. fruit. Plants are indeterminate and have high resistance to Vt and intermediate resistance to Nematodes and Late Blight. Damsel has performed well in both field and high tunnel production. ***12495***

MEDUSA F1 ORGANIC

73 Days. A hybrid indeterminate purple tomato with heirloom flavor and appearance. Vigorous plants with a strong disease package set large uniform fruit with reduced cracking. Performs in open field and protected culture. Intermediate resistance to Vt, RN and LB. ***12937***

MAI TAI F1 ORGANIC

75 Days. This yellow tomato has a beautiful red blush at the blossom end and through the core of its sweet tangy flesh. The uniform smooth round fruit weigh 6-10 oz. and have exceptional eating quality, texture and flavor. Productive plants have strong disease resistance and perform well in open field and protected culture. High resistance to F1, F2, Vt, ToMV, TLM and ToANV. ***13147***

CAIMAN F1 ORGANIC

76 Days. Deep red oblate fruit are full and meaty with outstanding tomato flavor. Large open plants set high yields of 7-9 oz. fruit, even during hot spells. A good variety for both open field and protected culture. The extensive disease package includes high resistance to F1, F2, Vt, ToMV and TLM, and intermediate resistance to TSWV and RN. ***11232***

INDETERMINATE CLUSTER TOMATO

PREMIO F1

68 Days. Premio's indeterminate plant produces high yields in clusters of 6-8 fruit. The round fruit weigh about 4 oz. and have good shelf-life after harvest. Fruit clusters ripen uni formly to a good red color making Premio well-suited to both full-cluster and single fruit sales. A great choice for early greenhouse use and roadside market sales. High resistance to F1, F2, Vt, ToMV and TLM, and intermediate resistance to St. ***11887***

BEDDING PLANT GROWER FAVORITES

BUSH EARLY GIRL F1

63 Days. Compact determinate plants produce good early yields of 6½-7½ oz. fruit. The oblate fruit have a deep red exterior and interior color, and have excellent flavor for such an early variety. Because of its space-saving plant habit and early maturity, Bush Early Girl also makes a nice addition to bedding plant offerings. Intermediate resistance to Al, F1, F2, Vt, TMV, and Nematodes. ***00889***

BUSH EARLY GIRL F1

MORETON HYBRID F1

70 Days. Although not known for firm fruit, this standard variety is sought after for its rich flavor. The large meaty fruit mature early and have an oblate shape and rich red color. Its indeterminate plants perform best on stakes or trellises and produce over a long period. Resistant to Vt. ***00871***

MORETON HYBRID F1

JET STAR F1

72 Days. Jet Star produces high yields of large clean fruit, free of cracks and scars, in the second-early season. Globe-shaped fruit with bright attractive color inside and out have a very pleasant low acid flavor. Sturdy indeterminate vines grow vigorously, produc ing heavily on stakes or on the ground. ***00869***

BIG BEEF PLUS F1

75 Days. Big Beef Plus offers the same well-known traits of Big Beef with better flavor, adaptability, disease resistance, and appearance. The fruit have larger size and deeper red color from the Crimson gene, traditional tomato flavor, and greater yield potential. Indeterminate plants have high resistance to Al, F1, F2, Vt, and St, and intermediate resistance to TSWV and RN. ***13040***

CELEBRITY PLUS F1

75 Days. Celebrity Plus maintains all the well-known traits of Celebrity with improved disease resistance. Healthy determinate plants produce high-quality 7-10 oz. deep oblate fruit late into the season. Intermediate resistance to Al, F0, F1, Vt, TSWV, ToMV, St and RN. ***13135***

CELEBRITY PLUS F1

LEMON BOY PLUS F1

75 Days. An indeterminate yellow slicing tomato with excellent firmness, sweet tangy flavor, and less radial cracking than its predecessor, Lemon Boy. The uniform round fruit weigh 5-7 oz. and are set continuously on healthy, disease-resistant plants. High resistance to Al, F1, F2, F3, Vt, ToMV (races 0-2), St, TLM, and St, and intermediate resistance to RN. ***13039***

LEMON BOY PLUS F1

SUPERSONIC F1

79 Days. For plant sales and fresh market, this is a great variety to follow Jet Star. It produces heavy yields of large meaty top-quality tomatoes. Fruit are deeply oblate in shape, smooth, and quite crack-free. Indeterminate plants are receptive to ground or stake culture. ***00883***

JET STAR F1

SUPERSONIC F1

BETTER BOY PLUS F1

80 Days. An improvement on the classic Better Boy, Better Boy Plus offers more flavor, higher quality, and stronger disease resistance than the original. The bright red fruit are firm, have low radial cracking, and weigh approximately 1 lb. The indeterminate plants carry high resistance to Al, F1, Vt, ToMV, and St, and intermediate resistance to TSWV and RN. ***13041***

OPEN POLLINATED AND HEIRLOOM TOMATOES

CHEROKEE PURPLE

72 Days. This interesting heirloom has a distinctive look. Medium- large, deep oblate fruit have a pinkish-purple color inside and out. A nice addition for plant sales and roadside markets. ***00841***

BEEFY PURPLE

75 Days. Beautiful 12-14 oz. mahogany fruit are striped with green and have deep purple internal color. This open pollinated variety earned its place in the Cream of the Crop™ series with flavorful firm fruit that have a good shelf life. The determinate plants make Beefy Purple easy to manage in both commercial fields and home gardens. ***13582***

BRANDYWINE PINK ORANGIC

78 Days. This variety has very large fruit with deep pink skin and red flesh. The potato leaf plant is not a heavy yielder but makes up for it with large flavorful fruit. Staking is recommended for indeterminate plants. ***00840***

BRANDYWINE RED

78 Days. Large vigorous indeterminate plants have potato leaf foliage and produce extra-large lobed fruit that can weigh up to 2 lbs. Red Brandywine has excellent old-fashioned tomato flavor. ***11846***

INDIGO™ BLUE BEAUTY ORGANIC

80 Days. This signature Indigo™ variety is a sure beauty when it comes to looks and flavor. Uniquely colored 8 oz. fruit hold well on the vine and are sunburn and crack resistant. ***12580***

STRIPED GERMAN

80 Days. The yellow fruit have a variable ribbed shoulder with shades of reddish-pink stripes, and a yellow/red marbled interior. Known for its delicious fruity flavor, smooth texture, and medium to large size. Deep oblate shaped fruit are produced on an indeterminate vine with a heavy leaf cover. ***12850***

RUTGERS 250

82 Days. Known for crack resistant tomatoes of mild flavor, this variety has a medium-large indeterminate vine that performs best on stakes or a trellis. Intermediate resistance to Al, F1 and Vt. ***00885***

ORANGE JAZZ ORGANIC

85 Days. Unique orange beefsteak with yellow stripes. The large 1 lb. fruit has a prominent flavor with a hint of peach. A great tomato for specialty growers. This variety has been selected under disease pressure and forms very vigorous vines that hold up well to fungal pathogens. ***12582***

BEEFSTEAK ORGANIC

90 Days. A household name since the 1890's and especially popular in the Northeastern U.S. Beefsteaks are known for large, 2 lb. fruit, and distinct heirloom flavor. Great all-purpose variety for slicing, canning and fresh eating. ***00090***

BELLATRIX F1

SUPREMO F1

ROMA, PLUM AND SALADETTE TOMATOES

BELLATRIX F1

65 Days. An early maturing and high-yielding determinate Roma tomato with a concentrated set and excellent quality for cooking and preserving. Bellatrix fruit weigh 4-5 oz. and have low incidence of blossom end rot. The plants perform best in-ground or in a large container and have an excellent disease resistance package including Late Blight. High resistance to F2, F3, TMV, ToMV, and LB. ***65264***

INCA F1

GRANADERO F1 ORGANIC

PONY EXPRESS F1

PLUM REGAL F1

POZZANO F1

ROMA VF

ATREVIDO F1

SAN MARZANO

SUPREMO F1

69 Days. An early and productive hybrid saladette that produces high yields of uniform extra-large and large fruit on a compact determinate plant. Supremo has shown good heat set ability and the fruit are very firm, have a nice red color, and great shelf life after harvest. High resistance to F1, F2, F3, Vt, BS, and RN, and intermediate resistance to TSWV. ***12210***

INCA F1

70 Days. A regionally adaptable Roma tomato with a medium compact plant and a slightly extended, but still concentrated, early set. The elongated blocky fruit reach large to extra-large size and are deep red, firm, and have a good shelf life. Can be used for both the vine-ripe and mature green markets. High resistance to AI, F1, F2, F3, Vt, and BS, and intermediate resistance to TSWV and RN.. ***13456***

PONY EXPRESS F1

72 Days. Deter minate plants produce early concentrated sets of large saladette-type fruit that are elongated in shape and have a dark red color. Growers have been impressed with its earliness, size and strong yields when compared to other varieties of this type. An excellent disease package that includes high resistance to F1, F2, F3, Vt, ToMV, BS and RN helps to ensure a high quality crop of tomatoes. ***11843***

POZZANO F1

72 Days. Large elongated 4-5 oz. firm fruit have traditional San Marzano shape, offer good tolerance to Blossom End Rot and hold up well after picked. Great for sauce with heavy yields of solid fruits. Can be grown in open field or protected culture. High resistance to F1, F2, Vt and ToMV (races 0-2). ***12213***

ATREVIDO F1

75 Days. Strong determinate plants offer an early and extended set of large blocky fruit with excellent firmness. Atrevido has consistently shown high yield potential, uniform ripening, and dark red color. The extended set and strong disease package allow for a wider planting window. High resistance to F1, F2, Vt, ToMV, and BS and intermediateresistance to TSWV, TYLCV, and RN. ***13323***

GRANADERO F1 ORGANIC

75 Days. Meaty, hefty 5 oz. blocky plum shaped fruits are prolific on this compact indeterminate plant. Heavy yields are achievable in open field or protected culture. High resistance to F0, F1, Vt, ToMV and PM and intermediate resistance to TSWV and RN. ***12385***

PLUM REGAL F1

75 Days. This 4 oz. plum tomato is produced on a medium-sized determinate plant with exceptional yield and strong disease package. Plum Regal's fruit have a deep red color, good flavor, dark red interior color and resist cracking and gray wall. Ideal for vine ripe or mature green harvest. High resistance to F1, F2, Vt and St, and intermediate resistance to TSWV. ***12212***

ROMA VF

80 Days. This traditional standard pear-shaped variety produces large determinate plants that extend the harvest period with a heavy total yield. Roma has relatively high viscosity and soluble solids for thick, red sauce. ***00886***

SAN MARZANO

85 Days. This old-style Italian Roma type is later to mature than Roma VF but offers larger fruit size. The indeterminate plants produce high yields of large fruit that hang in large clusters. The bright red fruit measure 3½-4"L and have an extra-high solid content that makes them ideal for canning. San Marzano holds well on the vine and in storage. ***11889***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Cream of the Crop Tomato · Available as Plug & Liner · Late Blight Resistant

COCKTAIL TOMATOES

RED RACER F1 ORGANIC

57 Days. This early vigorous plant produces large 2 oz. cocktail tomatoes with a meaty consistency, sweet flavor, and traditional green shoulder. Plants offer high resistance to F1, F2, Vt, ToMV, St, and intermediate resistance to Nematodes. ***12494***

BADABING! F1

65 Days. A regional AAS Winner with an impressive disease package, BadaBing! is a beautiful bright red cocktail tomato that does well in open field or protected culture production. Indeterminate plants produce high yields of 2" fruit, 8-10 fruit per cluster with outstanding flavor. This variety is part of the Cream of the Crop series and also carries TomatoGuard™ protection with high resistance to ToMV, Root Knot Nematode, F1, F2, Vt, Late Blight (PH 2,3) and intermediate resistance to EB and SLS. ***13929***

BELLINI F1

65 Days. An early maturing, light orange cocktail tomato with great flavor. Indeterminate plants produce clusters of 8-12 smooth, deep oblate shaped 1½ oz. fruit with a rich, low acid flavor and sweetness. Widely adapted and easy to grow, with high resistance to F1, F2, Vt, ToMV and TLM, and intermediate resistance to St and Nematodes. ***11543***

MOUNTAIN MAGIC F1

75 Days. This cocktail tomato produces high yields of uniformly round 2 oz. fruit that have great flavor, high sugars, and long shelf life. The fruit are highly crack-resistant and produced in clusters that ripen evenly, allowing for a full truss harvest. Indeterminate plants have high resistance to F1, F2, Vt, and St, and intermediate resistance to Late Blight. ***11382***

INDIGO ROSE

80 Days. These deep purple-black tomatoes are a gorgeous addition to farmers' market, CSA, and wholesale offerings. The 1½-2 oz. round fruit are remarkably dark where exposed to sun and blush red where shaded. Smooth rosy-purple interior flesh offers excellent depth of flavor, balancing pleasant acidity with a hint of sweetness. Fruit grow on compact indeterminate vines and resist cracking well. U.S. P.V.P 201100302. ***11171***

PURPLE ZEBRA F1

80 Days. This AAS winner has beautiful dark red fruit with green stripes and a deep mahogany red interior. Purple Zebra is a Cream of the Crop variety with firm texture, rich complex flavor, and good tolerance to cracking. The indeterminate plants carry a strong disease package including high resistance to F1, Vt, ToMV, LB, and TLM (A-E), and intermediate resistance to TSWV and TYLCV. ***13265***

CONTAINER TOMATOES

HUSKY RED F1

68 Days. Husky Red has a sturdy plant with potato-like foliage and is perfect for single-plant patio containers. Fruit are produced throughout the season, are large for their type, and have very good eating quality. Husky Red can be staked, caged, or grown in containers and requires little, if any pruning. It will attract a lot of attention for large, single plant sales as tomatoes begin to ripen. High resistance to Al, F1, F2, Vt, and St. ***00868***

CHOCOLATE SPRINKLES F1

CANDYLAND RED

ARTEMIS F1

ESTERINA F1 ORGANIC

SUNCHOCOLA F1

CHERRY TOMATOES

UNICORN F1

50 Days. Medium to large, deep red cherry tomatoes are produced in long trusses on indeterminate plants. The fruit average 0.5 oz, and are very sweet, firm, and tolerant to cracking. With high yields, good field holding ability, and exceptional quality, Unicorn is a sure performer for commercial growers and gardeners alike. High resistance to F1, ToMV, and TLM, and intermediate resistance to BS and RN. ***13421***

CHOCOLATE SPRINKLES F1

53 Days. High yields of copper-red fruit striped with green are produced on indeterminate plants. The 1½" oval-shaped fruit have a rich sweet taste and grow abundantly on thick trusses. Chocolate Sprinkles is a significant improvement over heirlooms of this type and offers better disease resistance, with high resistance to F1 and Nematodes. ***12337***

ARTEMIS F1

55 Days. Sweet flavorful round fruit are set early on long trusses of 10 or more fruit each. The indeterminate plants perform well in high tunnel and open field culture, benefiting from high resistance to F1, F2, TMV, ToMV, TLM and Nematodes. The crisp firm fruit are 1" in diameter and are well suited to fresh market sales. ***12789***

TORONJINA F1 ORGANIC

55 Days. This vibrant orange cherry tomato has outstanding flavor and sweetness (average Brix 8%). The 1-1½" fruits average 0.4 oz. and are resistant to cracking. Vigorous plants grow well in open field or protected culture. High resistance to F0, F1, ToMV (races 0-2) and TLM. ***12595***

CANDYLAND RED

Currant tomato

58 Days. This National AAS Winner offers a much more manageable and compact indeterminate plant compared to other currant types. The tiny ½" round deep red fruit are very sweet and grow on long trusses of multiple fruit. The branched trusses are easily accessible for quick and easy harvest. ***12335***

ESTERINA F1 ORGANIC

60 Days. Very sweet 1-1½" cherry tomatoes are highly crack resistant. This multi-cluster type produces heavy yields of bright yellow-orange flavorful fruits. Plants can be grown in open field or protected culture. High resistance to Vt and TMV. ***12333***

SUNCHOCOLA F1

60 Days. These exceptionally sweet flavorful chocolate colored cherry tomatoes will have your customers coming back for more. Large indeterminate plants set their fruit in clusters and have high resistance to TMV. The large cherry size fruit measure 1¼" in diameter and offer a taste that rivals many heirloom varieties. ***11907***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Cream of the Crop Tomato · Available as Plug & Liner · Late Blight Resistant

TOMATOBERRY GARDEN F1

60 Days. High yielding indeterminate plants produce heart-shaped 1"x 1" fruit that resemble the shape of a strawberry. The fruit have a beautiful deep red color with broad shoulders tapering to a blunt point. Fruit on later sets are more pointed at the tip end. The fruit are firm and have an excellent sweet flavor. ***11890***

SAKURA F1 ORGANIC

62 Days. This red cherry is versatile for individual fruit or truss harvest. Well-attached sepals allow 20+ fruits per truss. Tolerance to cracking with a combination of sugars and textures make these 1-1½" fruit a real pleasure to eat. Adapted to both open field and protected culture, plants exhibit high resistance to F0, F1, ToMV (races 0-2) and TLM, and intermediate resistance to Root Knot Nematode and Silvering. ***11235***

SPARKY XSL F1

65 Days. A member of the Cream of the Crop Tomato line-up, Sparky XSL has exceptional flavor and sweetness (8.5% Brix), beautiful gold striping, and high yields per plant. With the X-tended Shelf Life gene, fruits are well suited for shipping and offer harvest flexibility for growers and home gardeners alike. Indeterminate plants offer good tolerance to biotic and abiotic stresses. ***12984***

TROPICAL SUNSET ORGANIC

65 Days. A favorite from our trials, Tropical Sunset has earned its place in the Cream of the Crop Series from its sweet fruity flavor (8% Brix) and beautiful golden fruit with an orangey-pink blush. Fruit are round, 1½" in diameter, and hold well on the plant when ripe. Healthy indeterminate plants perform well in open field and greenhouse plantings. ***12983***

ARTISAN™ PINK BUMBLEBEE ORGANIC

70 Days. This 1-1½" round cherry tomato offers extraordinary beauty and superb flavor. Fruit are pink and yellow striped and resist cracking. The color is great for mixed pints. Plants are well suited for both outdoor and protected culture production. ***11256***

MIDNIGHT SNACK F1

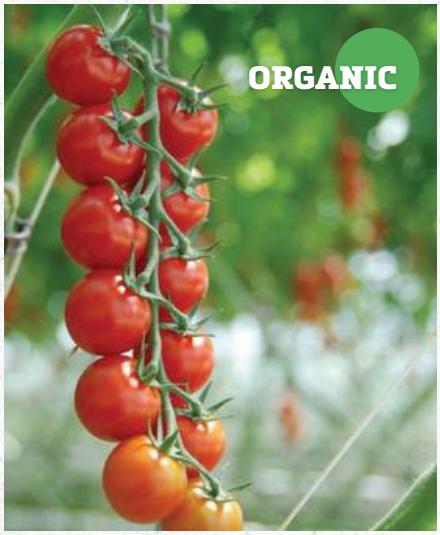

70 Days. This beautiful cherry tomato ripens to red with an overlay of glossy dark purple coloration where exposed to sunlight. Indeterminate plants set fruit all season and perform best when staked. This AAS Winner is sure to draw attention at farmers' market stands. ***12520***

SUPERSWEET 100 F1

70 Days. This large indeterminate plant yields an incredible number of the best tasting bite-sized cherry tomatoes! They're produced in grape-like clusters, bear all season long, and receive high praise for their sweetness and high vitamin C content. High resistance to F1 and Vt. ***00851***

YELLOW PEAR

HANGING BASKET TOMATOES

For best performance, plant one plant per 12-15" basket or container.

PEARDROPS F1

60 Days. Beautiful golden-yellow mini pear tomatoes are produced in great quantities on cascading plants. The fruit are high in acid and have a great tomato flavor. ***11897***

LIZZANO F1

63 Days. High quality bright red cherry fruit measure 1" in diameter, weigh 0.4 oz. and have excellent sweetness (7-8% Brix). Semi- determinate plants spread approximately 20" in diameter and have intermediate resistance to Late Blight. ***11892***

TUMBLING TOM YELLOW F1

65 Days. This yellow variety will produce full hanging baskets of 1-2" round fruit that are golden-yellow in color. The fruit are low acid and have a very mild flavor. ***11861***

DONNA RED F1

77 Days. A true hanging basket variety with a trailing habit of around 18" spread. Plants are well suited to 8-10" containers and pinching above the first three leaves will encourage branching and greater yields. The bright red fruit measure 1-1¼" in diameter, weigh 0.6 oz. and are very sweet with 8% Brix. Intermediate resistance to Al and EB. ***13438***

PEAR TOMATO

YELLOW PEAR

75 Days. Tall indeterminate plants produce a continuous supply of bright yellow fruit. The small mild flavored pear-shaped tomatoes are borne in clusters and have excellent sweet flavor. ***04956***

All-America Selections Winner · Grower Favorite · 2027 Introduction · Cream of the Crop Tomato · Available as Plug & Liner · Late Blight Resistant

TOMATILLO

SIQUEIROS F1

75 Days. Vigorous plants set early concentrated yields of large deep green fruit. The plant habit is more manageable than Tamayo and is suited to either stake or ground production. Fruit are ready to harvest when the outer husk splits and have an appealing citrus flavor. ***13127***

PURPLE

80 Days. An heirloom tomatillo with light green fruit and husk that blush to dark purple when exposed to the sun. Fruit interior is purple and light green with a sweet fruity flavor. Consider trellising to allow greater sun exposure and more purple coloration, and harvest when the outer husk splits. Plant two or more plants for best pollination and yields. ***14075***

GROUND CHERRY

AUNT MOLLY'S ORGANIC

85 Days. Once a very common home garden crop, ground cherries have become increasingly hard to find. With an excellent citrus flavor, they can be used fresh in salads or for preparing jams, pies, and sauces. Bushy plants grow 24" tall, are extremely productive, and are great for container production. Fruit is encased in a paper-like husk and will store 3-4 weeks under cool dry conditions. Offer samples at market to draw in your customers! ***12500***

TURNIPS

POLAR F1

40 Days. Early maturing and pure white, this salad turnip offers excellent sweetness. The uniformly round smooth roots resist pithing and bear refined taproots. The roots' texture makes them perfect for serving raw in salads. ***11548***

TOKYO SILKY SWEET F1

40 Days. A sweet crunchy salad turnip with clean white skin and excellent flavor and texture. Roots are sold as Sweet Kabu in produce markets, and are a part of the **Oishii Nippon Project promoting the use of delicious traditional Japanese vegetables around the world.** With delicate sweet flavor, Tokyo Silky Sweet is great for salads, roasting, pickling, and adding to soups. ***12864***

PURPLE TOP WHITE GLOBE

60 Days. Purple Top White Globe has a refined shape, fine quality and attractive appearance. It produces good-sized, globe-shaped, white fleshed turnips, with a creamy white color below the soil line and bright purple above. ***00920***

WATERMELONS

Seedless Watermelon Culture: Under the right management conditions, growers in any environment can be successful watermelon growers and benefit from increasing consumer demands. Select a variety that has the fruit appearance and disease resistance package suitable to your region, and refer to the cultural recommendations below to ensure a successful season.

Germination: Water a sterile seed starting mix and allow it to dry for 24-48 hours before seeding. It is critical to start seeds at a soil temperature of at least 90°F, so make sure media is heated prior to seeding and maintain 90°F temperatures for 48-72 hours after seeding, or until germination begins. This soil temperature may be achieved in a germination room or by using our high-temperature heat mat featured on page 226. To avoid soil drying too rapidly at high temperatures, seed into 128 cell plug trays or larger. After germination begins, reduce soil temperature to 80°F and water only as needed for the first week. DO NOT OVER WATER! Once the seedlings are established, temperature and watering may be adjusted to achieve sturdy plants.

Transplanting and Field Culture: Many growers raise seedless watermelons using plastic mulch, raised beds, and drip irrigation. These efforts will minimize plant stress, an important precaution as seedless melons grown under stress will produce hard dark-colored seeds. Encourage warmer soils while minimizing weed pressure through the use of Infra-Red Transmitting (IRT) plastic mulch (like the Solar Plastic Mulch on page 228). Since watermelons are tropical plants, it's best to transplant them after weather is warm, not just frost-free. Use row covers or plastic tunnels to protect against low temperatures or damaging winds.

Pollination: You will need to grow an early and continuously flowering pollinator variety for use with seedless watermelons. To ensure proper pollination, inter-plant one pollinator for every three seedless plants in the row. While not required, some growers see added success from choosing a pollinator variety from the same breeding program as their seedless variety. Research shows that bees tend to work up and down the row, rather than from one row to the next, so interplanting pollinators will help to improve pollination and increase yield potential. When the pollinator is farther from the plant you may see later set, more hollow heart, and potential loss of crown set. To guarantee yields further, add bee hives at a minimum of one hive per acre. Bee activity is adequate when one bee is present for every 100 blossoms at the peak hours of 6-10 a.m.

Harvest: Seedless watermelons are typically ready to harvest when the tendril closest to the fruit has dried completely, and definitely ready when the next closest tendril has also dried. A secondary indicator of ripeness is when the ground-spot of the fruit has turned a creamy yellow color.

Organic Harris Seeds Exclusive

POLLINATORS FOR SEEDLESS WATERMELONS

For best results, plant a ratio of one pollinator plant for every three seedless plants.

CHAPERONE F1

This compact pollinator produces early flowers on a bush habit that will not compete with your seedless varieties. It will continue to flower throughout the growing season and sets small, easy to identify fruit that crush when stepped on. Chaperone's extended flowering period will ensure a strong seedless watermelon crop. Intermediate resistance to Anthracnose and Fusarium Wilt (races 0,1). ***13594***

MINIPOOL F1 5-9 LBS.

A pollinator variety that has not only an extended flowering period but also a quality harvestable fruit. Minipool is an excellent choice for growers who need a pollinator variety for their seedless watermelon crop but want to be able to market the pollinator fruit. The 5-9 lb. fruit are round, seeded, and red-fleshed with a light green rind that is easy to distinguish from seedless varieties. The flesh is sweet and crisp. ***13247***

SIDE KICK

The compact and highly branching plants of Side Kick produce a profusion of flowers early and continuously which ensures good pollination and ultimately better seedless fruit quality. The small vines will not interfere with the seedless varieties and will produce very small fruit that are easily crushed when stepped on. Side Kick is the perfect companion to your seedless plantings. U.S. Patent 7,314,979 & 8,034,999. ***11584***

WILD CARD PLUS F1

This pollinator variety ensures both early and late pollen availability with male flowers present long before and after hybrid varieties are flowering. It sets small, round-oval, light green fruit with dark green stripes and yellow flesh that are easy to distinguish and crush easily. Intermediate resistance to Anthracnose and Fusarium Wilt (race 1). ***13588***

FASCINATION F1

SEEDLESS WATERMELONS

SWEET DAWN F1 16-20 LBS.

74 Days. Sweet Dawn is an early-maturing seedless watermelon that has shown consistent yield potential. The 16-20 lb. fruit have a clas- sic Crimson Sweet rind pattern, firm deep red flesh, and have shown less hollow heart issues than other early varieties. The short maturity of Sweet Dawn offers growers a significant advantage to enter the market earlier. Intermediate resistance to Fusarium Wilt (race 1) and Anthracnose (race 1). ***12331***

HONEYCUTT F1 16-22 LBS.

75 Days. Honeycutt pairs early maturity with high yields of large, high-quality seedless fruit. Blocky fruits with a medium-green striped rind are set in high numbers on plants that are vigorous and adaptable to climates and stressors. Intermediate resistance to Anthracnose (race 1) and Fusarium wilt (races 0,1). ***13593***

SWEET GEM F1 13-16 LBS.

79 Days. Sweet Gem is an attractive round seedless variety with a rich glossy dark green rind. A favorite from our trials, the 13-16 lb. fruit have crisp firm red flesh with small pips, and sweet mouth- watering flavor. Good fruit set and early maturity make Sweet Gem an ideal choice for roadside and local markets. ***12767***

DARK KNIGHT F1 14-17 LBS.

80 Days. These globe-shaped 14-17 lb. fruit have a smooth, glossy, very dark green rind in striking contrast to the dark red flesh. High sweetness, medium firm texture, and small pips are features of Dark Knight's excellent flesh quality. Tolerance to hollow heart and intermediate resistance to Fusarium Wilt (race 1), Anthracnose (race 1), and Powdery Mildew (race 1). ***13140***

EXCURSION F1 18-22 LBS.

81 Days. This early to mid-maturing variety offers a traditional rind pattern in a larger 18-22 lb. fruit, with potential for yields of greater than 50% 36-count fruit. The blocky fruit have red firm flesh with excellent flavor and texture. Intermediate resistance to Fusarium Wilt (race 1) and Anthracnose (race 1). ***12978***

ELEANOR F1 15-19 LBS.

82 Days. Eleanor offers a nice mix of blocky 36 and 45-count fruit with a medium-dark striped rind pattern and deep red flesh color. The 15-19 lb. fruit have high percent Brix and extremely nice eating quality with small pips. Strong plants offer high yield potential, disease resistance, and stress tolerance in the form of reduced cracking and fewer hard seed coats. High resistance to Fusarium Wilt (races 0,1) and Anthracnose. ***13417***

CRACKER JACK F1 ORGANIC 15-19 LBS.

83 Days. Blocky oval fruit have firm deep red flesh with small pips and excellent sweetness. Strong vines with continuous setting ability yield Crimson Sweet striped fruit averaging 15-18 lbs. that are primarily 45 count size, with a smaller percentage of 36 count fruit. Intermediate resistance to Fusarium Wilt (races 0,1) and Anthracnos. ***13405***

FASCINATION F1 16-20 LBS.

83 Days. Fascination produces excellent quality 16-20 lb. fruit that have a rich glossy dark green striped rind. The firm flesh is deep red, contains very small pips, and has great watermelon flavor. Fascination makes a great shipping melon and holds well after harvest. Intermediate resistance to Fusarium Wilt (race 1) and Anthracnose (race 1). ***12332***

All-America Selections Winner · Grower Favorite · 2027 Introduction

EL CAPITAN F1 16-20 LBS.

85 Days. El Capitan weighs 16-20 lb., features a dark green striped rind, and has firm, deep red flesh with small pips and excellent flavor. It has shown impressive yield potential as well as extended shipping and field holding ability. The blocky oval fruit are 36-45 bin-count, and can continue to add size the longer they are kept in the field. High resistance to Fusarium Wilt (races 0,1). ***13181***

LIL CAP F1 15-16 LBS.

85 Days. A high-yielding uniform seedless watermelon with a dark striped rind, deep red flesh, and very small pips. Vigorous vines perform best with wider spacing and early fertilization, and handle grafting well. Growers can expect a higher fruit count per plant, with fruit growing more slowly in size and holding longer in the field at a 45 bin-count size. Intermediate resistance to Fusarium wilt (races 0,1). ***14076***

SIERRA NEVADA F1 17-21 LBS.

85 Days. This firm-fleshed seedless watermelon is a great fit for the fresh-cut melon market, with deep red flesh and very small pips. The blocky oval fruit have a very dark green striped rind, and extended shipping and field holding potential. Intermediate resistance to Fusarium wilt (races 0,1). ***14077***

POWERHOUSE F1 13-16 LBS.

85 Days. Blocky 45-count fruit average 13-16 lb. and have a thick, dark green Crimson Sweet patterned rind. The firm red flesh develops sugars early but also holds well in the field, providing flexibility through a long harvest window. Broadly adaptable plants have potential for high yields. Intermediate resistance to Fusarium Wilt (race 1) and Anthracnose (race 1). ***13024***

TROUBADOUR F1 14-17 LBS.

87 Days. Troubadour is a seedless variety that is a consistent producer of 14-17 lb. fruit with the classic dark green striped Crimson Sweet rind pattern. The round to slightly oblong fruit have firm flesh with excellent eating quality, high sugars and deep red color. The strong vines have shown good yield potential and high resistance to Anthracnose. ***11581***

CAPTIVATION F1 14-17 LBS.

89 Days. Uniform blocky fruit that consistently make 14-17 lbs. and have a deep green rind with Crimson Sweet striping. Captivation's dark red flesh, firm texture and small pip size make it an excellent choice for the 45-count market class. Intermediate resistance to Fusarium Wilt (race 1) and Anthracnose (race 1). ***12977***

MILLIONAIRE F1 18-22 LBS.

90 Days. A standard for seedless watermelons for many years, Millionaire is the first choice of grow ers looking for high yields and shipping ability. The slightly blocky 18-22 lb. fruit have dark green stripes on a light green background, a thick rind, and firm dark pink flesh. Millionaire boasts high yields, great quality, and is very seldom plagued by hollow hearts. Intermediate resistance to Fusarium Wilt (races 0,1) and Anthracnose. ***00591***

MIRAMONTE F1 16-20 LBS.

90 Days. Miramonte produces large, blocky oval fruit with a very dark green striped rind and crisp, sweet, deep red flesh. The vigorous vines offer high yield potential of uniform 36-45 bin-count fruit, as well as intermediate resistance to Fusarium wilt (races 0,1). ***13633***

YELLOW BUTTERCUP F1 14-16 LBS.

90 Days. Yellow Buttercup is considered one of the best yellow fleshed varieties to grow. It produces nearly round fruit that weigh 14-16 lbs. and have a medium-green rind with dark green stripes. The flesh is bright yellow and of excellent eating quality, as it is dense, crisp, flavorful, and high in sugars. 80% of the fruit mature at a 60 bin count size. With a high percentage of marketable fruit, Yellow Buttercup is a perfect choice for fresh market and roadside stands. ***11236***

ORANGE CRISP F1 14-18 LBS.

92 Days. A unique orange fleshed seedless watermelon with gourmet quality fruit. Orange Crisp's medium-thick rind has shown very good sunburn tolerance, holds up well for long distance shipping, and has a light green background with thin dark green stripes. The vigorous vines yield round to slightly oval shaped fruit that weigh 14-18 lbs. An excellent item for cut melon displays at roadside markets and supermarkets. ***11587***

SEEDLESS SINGLE-SERVING WATERMELON

SIRIUS F1 5½-6½ LBS.

74 Days. A globe-shaped personal-sized seedless variety weighing 5½-6½ lbs. Sirius fruit have high quality bright red flesh with small pips, and a medium thick rind with Crimson Sweet pattern. Vigorous plants mature early and have intermediate resistance to Fusarium Wilt (race 1). ***12938***

NECTARO F1 5-7 LBS.

80 Days. This high-yielding personal-sized seedless watermelon has excellent internal quality with high Brix (11-13%), great flavor, and red flesh. The round fruit have a traditional Crimson Sweet rind pattern and size to 60% 6-count and 30% 8-count box sizes. The strong plants set 2-3 fruit per plant and hold up well to multiple harvests. ***13249***

OCELOT F1 3-5 LBS.

82 Days. A high-quality personal-sized seedless watermelon with excellent taste and texture, high Brix (11-12%), and deep red flesh color. The 3-5 lb. round fruit have a recognizable dark green tiger stripe pattern and uniform appearance. Expect 2-3 fruit per plant that size at 50% 8-count and 45% 6-count box sizes. ***13248***

WAIVER REQUIRED TO PURCHASE WATERMELON

Turn to page 213 for waiver

WATERMELON WAIVER INFORMATION

Due to potential liability regarding Watermelon Fruit Blotch, Gummy Stem Blight, and Anthracnose diseases on watermelon seed, we require the following:

Seeded Watermelon

For all purchases of ¼ lb. or 500 seeds or more, you are required to sign and return the Watermelon Waiver Form before shipment will be made.

Seedless & Pollinator Watermelon

For all purchases, you are required to sign and return the Watermelon Waiver Form before shipment will be made. **The Watermelon Waiver Form can be found on page 213, or at harrisseeds.com.** Please complete the form and return it by mail, fax (877-892-9197) or email to customercare@harrisseeds.com. A new disclaimer must be signed each year. Signed disclaimers from previous years are not valid for the current sales season.

Thank you.

SEEDED WATERMELONS

Seeded Watermelon Culture: Plant seeds ½-1" deep into a sterile mix with a soil temperature of 75-80°F. Seeds will germinate in about a week if kept moderately moist. Set plants into the field after the threat of frost has passed. Row covers or plastic tunnels provide protection from low temperatures or damaging winds. Plastic mulch maintains soil temperatures, soil moisture, and controls weeds. All melons prefer sandy loam soil with a pH 6.0-6.8 and yield best when beehives are added to pollinate. **Days to maturity are from transplanting and for variety comparison only.**
Avg. seeds/lb. = 5,000-15,000.

YELLOW DOLL F1 5-7 LBS.
68 Days. Semi-compact vines produce round to oval medium-green melons with dark green stripes and yellow flesh, averaging 5-7 lbs. each. ***00582***

MINI LOVE F1 7-9 LBS.
70 Days. Mini Love is a personal-size seeded watermelon. Compact plants yield up to 6 fruit per plant that weigh 7-9 lbs. Mini Love has a Crimson Sweet rind pattern and sweet crisp red flesh with few seeds. Intermediate resistance to Anthracnose. ***12346***

SHINY BOY F1 15-17 LBS.
75 Days. With exceptional yield potential, outstanding flesh color, and superb flavor and sweetness, Shiny Boy is a standby variety for the early market. The oblong 15-17 lb. fruit have a green rind with dark green stripes. Its vigorous vines hold up well to variable weather conditions. ***11583***

SWEETIE PIE F1 13 LBS.
75 Days. Sweetie Pie is a large 13 lb. Sugar Baby type watermelon with knock-out sweet flavor, slightly crunchy texture, and very juicy flesh. Fruit have a dark green shiny rind and its interior color is dark red and very sweet. ***12722***

BLACK TAIL MOUNTAIN ORGANIC 6-10 LBS.
80 Days. This OSSI pledged variety is a top performing watermelon for Northern climates and produces well in warmer zones. Consistently yields 8-12" round fruit that have a sweet, candy-like flesh. ***12584***

SANGRIA F1 20-24 LBS.
80 Days. An elongated seeded melon weighing 20-24 lbs. Dark green rind with light green stripes covers dark red high quality flesh. Good for shipping. Intermediate resistance to Fusarium Wilt and Anthracnose. ***12768***

CRIMSON SWEET 15-25 LBS.
85 Days. Intermediate resistance to Fusarium Wilt and Anthracnose. Fruit are 15-25 lbs. and nearly round with almost equal amounts of dark and light green striping. The orange-red flesh is crisp with excellent flavor and small brown seeds. Crimson Sweet is the industry standard for Seeded watermelons. ***00581***

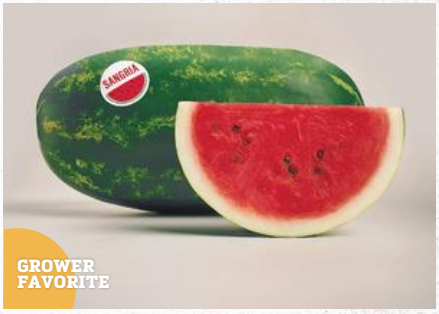

SUGAR BABY 8-12 LBS.
85 Days. The round dark green fruit weigh 8-12 lbs. and have crisp firm delicious flesh that is bright red with small dark brown seeds. ***00587***

Organic Harris Seeds Exclusive

All-America Selections Winner · Grower Favorite · 2027 Introduction

The Harris Seeds Exclusive
PEPPER & TOMATO PLANT PROGRAM

Harris Seeds is proud to partner with Amos Zittel & Sons, Inc. to offer an exclusive vegetable plug program, now available in smaller, grower-friendly tray sizes. Choose from a selection of our top-performing Pepper and Tomato varieties, grown in a 26-plant, 30MM Elle Strip tray. These larger plugs can be transplanted right into the field after hardening off (approx. 1 week).

Look for the 'Available as Plug & Liner' Icon throughout the product pages for available varieties.

AMOS ZITTEL & SONS, INC.

Program Dates:
Place your order at least 8 weeks ahead of your preferred shipping date, so plants can be sown and grown to size.

Purchasing Details:
Plant tags are not included. Order Minimum: 3 x 26-plant trays per order (1 variety per tray-75 plants minimum). Orders will be shipped in a Half Box (6 trays) or Standard Box (12 trays). Freight rates do not change for partial boxes, so while there is a 3-tray minimum, we recommend filling the box by ordering in increments of 6- or 12-trays for the best value.

to begin or expand your cut flower production.

LIVE GOODS

Our ornamental live goods are the high-demand blooms your customers' desire. The Harris assortment includes Dahlia tubers in an array of styles, stately Gladiolus corms in every hue, and elegant palette-inspired Lily bulbs.

Dahlias

Types include ball, decorative, dinner plate, anemone, waterlily, and pompon styles in a spectrum of colors.

Gladiolus

Beautiful bi-colors, sought after rich shades, and our popular grower's mix.

Lilies

Oriental, Orienpet, and LA hybrids displaying a mix of vibrant tones.

Ornamental bulbs, corms and tubers are drop-shipped between March and June from our supplier; Ednie Flower Bulbs, based on the optimal planting time for your region.

Watch for our Ornamental Live Goods Look Book, featuring our full selection, to be released in early January. Variety selection is based on vendor availability at program launch.

* These items have seasonal availability and cannot be shipped to AK, HI, or PR. Please visit harrisseeds.com for more details.

FROM SEEDS TO STEMS,

success starts with Harris Seeds!

PLUGS & LINERS

Through collaboration with our trusted plug and liner vendors, we deliver both proven performers and exciting new varieties. Grow reliable crops like Celosia, Zinnias, and Stocks. Produce Lisianthus with confidence and explore the latest color innovations in Snapdragons. A new season of standout products begins here.

Gro 'N Sell Cut Flower Program:

- available weeks 1-52
- sold in 125 and 210 tray sizes

Raker Roberta's Specialty Cut Flower Program:

- available on even weeks only during weeks 10-52
- sold in 36 and 160 tray sizes
- 11% early order discount deadline is December 15th

Proven Winner Carleton and Proven Winners Loudon:

A huge selection of Proven Winner woody ornamentals valued for blooms and foliage. Beautiful Hydrangeas, graceful grasses and the glossy gorgeous leaves of Diervilla and Weigela. Available in quarts and 32 trays.

Our **dedicated Plug and Liner Sales Rep, Peyton Norway,** is available to walk you through options and answer any questions you have. She can be reached by phone or email.

CUT FLOWERS

FAVORITE BERRIES

NOBLESSA

BLUE HORIZON F1

BLUE PLANET F1

ACHILLEA — *Perennial*

120-130 Days. These long lived perennials are a great addition with flat topped flower heads and fern like foliage. Though a first year flowering perennial, some growers will plant yearly for a longer season of blooms.

RED FLINT

MILAS QUEEN MIX ORGANIC

AUTUMN BEE ATTRACTION F1

QUATTRO F1

Favorite Berries
This pleasing mix features flowers in a blend of apricot, lavender, pink, rose, white, and yellow shades. Height: 24-30", 12-18" spread.
24214 Raw seed: 250 sds $9.12

Noblessa
Snowy white double flowers are a great filler in bouquets and garden borders. Height: 18-24", 12-18" spread.
24215 Raw seed: 250 sds $18.27

AGERATUM — *Annual*

85-105 Days. Tall multi-branching plants produce an abundance of fuzzy blue blooms. Florist and farmer's market customers will equally love this uniquely textured filler.

Blue Horizon F1
Periwinkle blue. Height: 30", 15-18" spread.
02000 Raw seed: 50 sds $8.33; 500 sds $16.26; 1M sds $22.97; 5M sds $104.45

Blue Planet F1
Lavender blue. Height: 30", 15-18" spread.
20668 Raw seed: 500 sds $14.50; 1M sds $25.72; 5M sds $119.90

Red Flint
A stunning and unique color for this genus. The flossy flowers are a shade of magenta that complement pastels well while also perfectly contrasting with bolder colors. These stems will always have a place in your bouquets! Height 24", 12-16" spread.
24360 Raw seed: 50 sds $9.95; 500 sds $19.95; 1M sds $36.00; 5M sds $150.00

AGROSTEMMA — *Annual*

75 Days. A delicate accent for bouquets, and wispy designs. Best when started in early spring, benefiting from cool weather.

Milas Queen Mix Organic
A mix of purple and white 1½-2" flowers. Height: 24-30", 6-10" spread.
23463 Organic seed: 50 sds $2.69; 250 sds $9.69; 1M sds $29.60; 5M sds $136.00

ALLIUM — *Perennial*

120-140 Days. These ornamental onions are a reliable perennial great for fresh and dried bouquets. Attracting butterflies and other pollinators, they will grab your customers' attention!

Autumn Bee Attraction F1
An edible ornamental with a sweet garlic taste. Unusual in that it can set flowers within its first year. After the first season, this white flowering allium will produce spring and fall blooms. Height: 28-32", 9-12" spread.
24203 Raw seed: 250 sds $23.74

Quattro F1
A versatile plant that gives back in so many ways! The edible leaves taste of onion-garlic and can be enjoyed throughout the entire growing season. Starting its second year, the purple flowers are present for about 7 weeks in mid-summer and when cut have a vase life of up to 3 weeks. Blooms on this perennial are highly attractive to pollinators. Height: 28-32", 9-12" spread.
61191 Raw seed: 250 sds $39.48

All-America Selections Winner · Grower Favorite · 2027 Introduction

AMARANTHUS — *Annual*

65-75 Days. This interesting old fashioned grain is a favorite direct sow flower. Hanging and upright types offer an enchanting look that designers will love. Pinch at 9 inches for multiple stems. Growers can utilize tighter spacing with the upright, plume types to produce thinner stems.

Caudatus Red
Scarlet red spilling tassels. Height: 32-48", 15-30" spread.
21926 Raw seed: 50 sds $5.66; 250 sds $9.54; 1M sds $15.84; 5M sds $71.10

Coral Fountain
Cascading tassels of coral and muted pink shades. Height: 24-36", 6-12" spread.
24093 Raw seed: 50 sds $4.18; 250 sds $5.61; 1M sds $14.05; 5M sds $63.40

Dreadlocks Organic
Husky plants produce thick knotted trails of deep red blooms falling from sturdy stems. Height: 24-36", 6-12" spread.
23464 Organic seed: 50 sds $3.26; 250 sds $11.91; 1M sds $31.45; 5M sds $104.95

Emerald Tassels Organic
Emerald green spilling tassels. Height: 24-36", 6-12" spread.
23465 Organic seed: 50 sds $2.05; 250 sds $6.54; 1M sds $13.83; 5M sds $51.75

Green Thumb
Upright green plumes. Height: 16-24", 6-12" spread.
23993 Raw seed: 250 sds $5.67; 1M sds $12.67; 5M sds $57.65

Hot Biscuits Mix Organic
Feathery rust upright plumes. Height: 24-36", 6-12" spread.
23466 Organic seed: 50 sds $4.15; 250 sds $11.50; 1M sds $15.69; 5M sds $67.05

Mira
Trailing bi-colored lime-green and raspberry-rose dreadlock ropes. Height: 35-45", 9-15" spread.
23994 Raw seed: 250 sds $9.13; 1M sds $25.45; 5M sds $40.50

Oeschberg
Upright eggplant purple flower spikes. Height: 35-45", 9-15" spread.
23995 Raw seed: 250 sds $6.59; 1M sds $16.28; 5M sds $73.15

Pygmy Torch
Rich crimson red upright spikes. Height: 12-16", 18-24" spread.
23996 Raw seed: 50 sds $2.56; 250 sds $5.67; 1M sds $12.67; 5M sds $57.65

CAUDATUS RED

AMMI *(False Queen Anne's Lace)* — *Annual*

85-110 Days. Gorgeous varieties offer uniformity in production, strong stems, and longevity compared with wild types. Enjoy an airy look with these large 4-5" lacey umbels that are accented with feathery foliage.

Green Mist
Green to white domed flowers. Height: 35-45", 12-15" spread.
20376 Raw seed: 50 sds $4.07; 250 sds $15.40; 1M sds $39.00; 5M sds $131.00

Dara ***Daucus carota***
95-105 Days. Novel pale pink to dark purple color. Height: 40-42", 24-28" spread.
22956 Raw seed: 250 sds $7.39; 1M sds $25.52; 5M sds $111.80

ANEMONE — *Annual*

130-150 Days. Ideal for wedding bouquets with poppy-like blooms. Plan ahead 8 weeks to transplant for 3 months of growth with temperatures between 45 and 55°F for optimum stem length.

Mona Lisa Mix F1
A masterpiece among anemones: Mona Lisa puts out up to 18 flowers per plant and flowers under lower winter light levels. Mix of pink, purple, red, and white shades. Height: 16-20", 6-8" spread.
21877 Raw seed: 25 sds $15.22; 50 sds $24.53; 100 sds $31.24; 500 sds $138.20

KIRIGAMI MIX F1

SILKY SERIES

SILKY GOLD AND DEEP RED

SOULMATE

BENARY'S PRINCESS MIX

GIANT RAY MIX

MATSUMOTO MIX

STANDY MIX

AQUILEGIA *(Columbine)* — *Perennial*

120-150 Days. This old fashioned garden favorite has uniquely upward facing blooms! *Sow in October/ November to produce early spring blooms.*

Kirigami™ Mix F1

This improvement of the popular Origami series has more consistent flower timing. Mix of pink, purple, red, white, and yellow shades. Zones 5-9. Height: 14-24", 12-20" spread.
23518 Raw seed: 100 sds $25.95; 500 sds $114.55

ASCLEPIAS *(Butterfly Weed)* — *Annual*

105-120 Days. Add zest to your cut flower offering with this attractive accent flower. *To extend vase life be sure to scorch cut stems with a flame or boiling water.*

SILKY SERIES

High-quality series is bred for greenhouse and outdoor summer production and prefers a warm, dry location. While the striking colors of tropical milkweed attract many pollinators and beneficial insects, it's critical to cut back the foliage of plants grown in warmer climates—where it doesn't go dormant—in late Fall. This helps prevent disruption to the Monarch butterfly's migration and also reduces the spread of a parasite that specifically harms Monarchs. Height: 24-28", 10-12" spread.
20869 Deep Red
20437 Gold
Raw seed: 250 sds $10.69; 1M sds $30.54; 5M sds $139.00

Soulmate

Tall stems with stunning deep rose clusters of bloom, this swamp milkweed attracts pollinators and has a great vase life. Height: 32-48", 20-24" spread.
24109 Raw seed: 250 sds $11.65; 1M sds $17.81; 5M sds $78.00

RHAPSODY F1

GRANDIFLORUM

ASTER — *Annual*

100-110 Days. Asters are considered an 'old fashioned' flower that still rank high in popularity. Choose from single flowered spray types, cushion types, and quilled types. *Never grow in the same field more than one year in a row and be aware high nitrogen increases susceptibility to fungus and lowers flower quality.*

Benary's Princess Mix

Dome shaped flower heads are highlighted with a bright yellow center. Tolerant to challenging growing conditions, even wet conditions. Mix of pink, purple (blue), red, white, and yellow. Natural Bloom: Aug/Sept. Bloom Size: 3.5-4". Bloom Type: Double Crested. Height: 24-30", 10-12"spread.
24039 Raw seed: 500 sds $14.26; 1M sds $22.80

Giant Ray Mix

Unique flower texture with pointy quilled petals. Shades of blue, pink, red, and white. Natural Bloom: Early Aug. Bloom Size: 5-5½". Bloom Type: Double. Height: 24-30", 12-18" spread.
02090 Raw seed: 50 sds $4.76; 500 sds $7.48; 1M sds $11.62; 5M sds $54.90

Matsumoto Mix

Heat resistant Matsumoto Mix offers eye-catching yellow centers on upright plants. Fusarium tolerance is an added plus. Mix includes up to 15 colors. Natural Bloom: Aug/Sept. Bloom Size: 2-3". Bloom Type: Double Cushion. Height: 24-30", 15-20" spread.
09898 Raw seed: 500 sds $6.48; 1M sds $11.46; 5M sds $50.00

Standy Mix

Very popular cushion-type flowers. Fusarium and Verticillium Wilt Tolerant. Mix includes shades of red, pink, purple, and white. Natural Bloom: Aug/Sept. Bloom Size: 3-4". Bloom Type: Double Cushion. Height: 24-30", 15-20" spread.
02091 Raw seed: 500 sds $14.06; 1M sds $22.15

ASTILBE — *Perennial*

350-375 Days. This reliable shade plant produces long slender plumes perfect for bouquets. Sow in June/July to produce flowering plants the following summer.

Rhapsody F1

Grown specific for cut flower production, Rhapsody is tall and gorgeous stand out in bouquets. A mix of red, pink, carmine, and cream plumes. Zones 4-9. Height: 30-34", 12-20" spread.
24040 Pelleted seed: 250 sds $35.43; 250 sds $38.97; 1M sds $123.24; 1M sds $135.56

ASPARAGUS, *See Foliage & Pods pages 208-209*

AMMOBIUM — *Annual*

70-80 Days. Winged Everlasting is a high yielding plant, producing an abundance of stems for fresh or dried use. Harvest when flowers are half open.

Grandiflorum

The most adorable everlasting! These pearl sized, pure white blooms work wonderfully fresh or dried. They have the same texture and shape of strawflower, but in miniature. The flowers will continue to open after harvest to expose a yellow center. Well branching, winged stems on sturdy plants. Height 20-24", 9-12" spread.
67239 Raw seed: 50 sds $3.95; 250 sds $9.95

All-America Selections Winner · Grower Favorite · 2027 Introduction

BASIL, ORNAMENTAL & BEGONIA

See Foliage & Pods pages 208-209

BELLS OF IRELAND — *Annual*

95-120 Days. An excellent tall element in both fresh and dried arrangements.

Bells of Ireland

Bell-shaped, green calyxes sit on top tall spikes and offer a fresh citrus scent. Height: 24-48", 12-16" spread.

03419 Raw seed: 50 sds $3.64; 500 sds $6.15; 1M sds $11.44; 5M sds $48.98

BUPLEURUM — *Annual*

85-100 Days. Bupleurum is a unique but classic filler.

Griffiti

Sprays of small, 2-2½" yellow flowers with chartreuse leaves. Height: 24-32", 12-15" spread.

22012 Raw seed: 50 sds $3.01; 250 sds $6.07; 1M sds $12.76; 5M sds $57.80

CALENDULA — *Annual*

60-70 Days. Cut flower growers gravitate towards calendula because of their clean, crisp flowers and bright cheery colors.

Kinglet Formula Mix

Large dark orange 2-2½" blooms. Height: 25", 20-24" spread.

23348 Raw seed: 50 sds $3.62; 250 sds $8.21; 1M sds $29.88; 5M sds $137.20

TOUCH OF RED SERIES

This stunning Calendula series consists of contrasting tones creating an attractive effect for borders, containers, and vases. Large 2–4- inch flowers offer both beauty and productivity for growers and gardeners alike. The Touch of Red series are tall vigorous plants that have strong stems perfect for farmer florists or adding height to a cottage garden. Height: 24", 10-12" spread.

24253 Buff: Petals are cream colored on the front and crimson on the reverse.

24254 Mix: Includes all three colors of the Touch of Red series: yellow, buff, and orange. Flowers have a dark center and each petal has a "touch of red" on the underside.

Raw seed: 50 sds $3.25; 250 sds $6.55; 1M sds $22.04; 5M sds $99.20

CAMPANULA *(Canterbury Bells)* — *Biennial*

60-70 Days. A must for cut flower growers! Campanula is known for bell shaped blooms along a tall spike, making a great focal or accent flower. (Note: For greenhouse cuts, use 4 x 4" spacing. For outdoor cuts, use 12 x 12" spacing.)

CHAMPION II SERIES F1

Superb uniformity and large flower size! In addition, uniform plant height and upward-facing flowers. Height: 36-40", 10-12" spread.

23998 Deep Blue: rich dark blue.
23999 Lilac
24000 Pink: medium pink.
24001 Rose
24002 White: pure white.

Pelleted seed: 10 sds $6.02; 100 sds $16.80; 500 sds $74.70

CARTHAMUS — *Annual*

60-80 Days. Safflowers bring a unique look and texture to bouquets. A great accent item used fresh or dried.

Grenade Orange

Nearly spineless stems with tufts of orange globular flower buds. Height: 32-40", 8-10" spread.

23892 Raw seed: 250 sds $9.82; 1M sds $27.52

PAMPAS PLUME MIX ORGANIC

CELOSIA, PLUMED — *Annual*

C. argenta plumosa

85-95 Days. The texture and intense color make plumed celosia great for focal or accent flowers. Ideal for single stem, high-density production, or pinch for multiple stems.

Dragon's Breath®
Extra-large brilliant red plumes with dark maroon foliage. Height: 24-32", 12-16" spread.
23037 Raw seed: 10 sds $7.16; 100 sds $39.09; 500 sds $154.45

Pampas Plume Mix Organic
Large feathery plumes are a great textural addition to bouquets. A mix of yellow, orange, pink, and red. Height: 30-40", 6-12" spread.
23467 Organic seed: 50 sds $3.28; 250 sds $15.69; 1M sds $25.68; 5M sds $115.60

SUNDAY SERIES
First professional cut version of the popular plume-shaped celosia. Pinch or no pinch for great full plumes and long, strong stems. (Additional separate colors are available by request, 1,000 seed minimum). Height: 28-40", 5-7" spread.
24004 Bright Pink
24005 Gold
24094 Green
22490 Orange
22194 Mix: Mixture of orange, pink, red, and salmon shades.
Pelleted seed: 100 sds $17.14; 500 sds $76.70

CELOSIA, WHEAT — *Annual*

C. spicata

85-120 Days. The gorgeous feather-like plumes of wheat celosia accents wild or sophisticated styles. A pinch is recommended for an abundance of harvestable stems.

Asian Garden
A pollinator magnet, this terrific variety produces bright pink spikes all summer long. Height: 30-40", 12-18" spread.

COSMOS — *Annual*

70-90 Days. Cosmos offer airy foliage suitable as a cut alone or with its delicate flowers. These beauties make a lovely addition to mixed arrangements and will be a hit for roadside stands, farmers' markets, and for event designers.

Apricotta
A plethora of 3" blooms showcase a dreamy apricot-pink hue that defies a simple description. Soft pink centers create an almost iridescent effect, while delicately ruffled petal edges add texture.Height 32-40", 16-20" spread.
24364 Raw seed: 50 sds $4.95; 250 sds $12.95; 1M sds $36.00

Bright Lights
Also known as Sulphur Cosmos, these 2" semi-double blooms come in an attractive blend of gold, orange, red and yellow. Versatile flowers that work well in cutting, border, or pollinator gardens. Perfect for fall displays. Height 36-48", 12-24" spread.
24363 Raw seed: 50 sds $2.95; 250 sds $9.95; 1M sds $28.00

DOUBLE CLICK SERIES
Mixture of semi-double to fully double flowers. Height: 24-36", 24" spread.
21900 Cranberries: pure burgundy-red.
21618 Rose Bon Bon: medium rose.
23783 Violet Bicolor: violet.
21638 White: creamy white.
20201 Extra Mix: formula mix of above varieties.
Raw seed: 250 sds $12.55; 1M sds $43.04

Kiiro
You'll find yourself reaching for this unique cosmos again and again. Its 2-inch pale yellow flowers are accented by a white center halo, while newly opened blooms reveal a peachy-pink reverse that adds an unexpected touch of color. The subtle contrast creates beautiful depth in mixed arrangements. Height 48", 12-18" spread.
24365 Raw seed: 50 sds $3.95; 250 sds $11.95; 1M sds $32.00

Purity
This simple beauty won us over in trials. Consistently presenting more flawless large white flowers and stems per plant than any other white on the market. Beautiful fern like foliage makes great filler as well. An elegant staple. Height 40-60", 12-18" spread.
24362 Raw seed: 50 sds $2.95; 250 sds $9.95; 1M sds $28.00

Sea Shells Organic
Unique fluted petals form tubular shell-like flowers in shades of carmine, pink, rose, and white. Height: 36", 24" spread.
23269 Organic seed: 50 sds $3.93; 250 sds $7.20; 1M sds $9.64; 5M sds $41.80

Sensation Mix
Showy semi-double blooms in a color range of crimson, pink, rose, and white. Height: 48", 24-36" spread.
02330 Raw seed: 50 sds $2.60; 250 sds $4.51; 1M sds $12.68

All-America Selections Winner · Grower Favorite · 2027 Introduction

DELPHINIUM — *Perennial*

110-160 Days. Breathtaking flower spikes are overlapping with gorgeous delicate florets. Individual florets are great for detail work like boutonnieres, corsages, and hair flowers while large spikes give height to arrangements.

D. elatum

Aurora Mix F1

A formula mixture of blue, lavender, purple, and white shades. Finishes 15-17 wks. Zones 3-7. Height: 30-42", 10-12" spread.

20821 Raw seed: 25 sds $19.22; 100 sds $49.45; 500 sds $210.40

Candle Blue Shades F1

Standard Delphinium varieties are programmed to bloom under long days however the Candle series is ideally suited for winter production, flowering with a minimum of 10 hours of day length. These very early and uniform plants are excellent for short day greenhouse production or overwintering in high tunnels. Outstanding F1 vigor insures good results from subsequent flushes. A gorgeous true blue. Height 48-60", 8-12" spread.

67571 Raw seed: 100 sds $41.48; 500 sds $163.57; 1M sds $261.70

Guardian Mix F1

Mixture consists of an even blend of blue, lavender and white. Finishes 18-23 wks. Zones 3-7. Height: 30-39", 10-12" spread.

02755 Raw seed: 100 sds $25.50; 500 sds $105.25

King Size Misty Lavender

Long stems of double, extra large slate-purple blooms. This distinctive and unique color is what florists' dreams are made of. The King series is bred specifically for cut flower production; offering strong stem integrity, uniformity, and a dependable harvest.Height 32-47", 16-20" spread.

24366 Raw seed: 100 sds $9.95; 500 sds $19.95; 1M sds $30.00

Magic Fountains Mix

Choose this shorter series to withstand wind damage. Mix includes a color range in shades of blue, lavender, and white with both white and dark bees. Finishes 19-23 wks. Zones 3-7. Height: 30-36", 10-12" spread.

02365 Raw seed: 500 sds $13.87; 1M sds $24.38

D. grandiflorum

JENNY'S PEARL SERIES F1

Jenny's Pearl brings a very different look to containers, landscapes and cut flower bouquets compared to other delphinium. The mounds of lacy leaves are covered in airy sprays of delicate blooms from early summer to fall. Finishes 12-15 wks. Zones 5-7. Height: 18-25", 10-12" spread.

23535 Blue
23540 Pink

Raw seed: 100 sds $53.78; 500 sds $237.60

DIANTHUS, SWEET WILLIAM — *Biennial*

The large, slightly rounded flowers make a statement as an accent or a focal flower. Our offering consists of first year flowering varieties, recommended to be treated as annuals. For quality harvest all season long, grow Sweets for early spring, late fall, and then the Amazon all season long!

D. barbatus

SWEET SERIES F1

100-115 Days. Ideal for early and late season field production, or year round covered production. Stem length is limited during warmer seasons.Height: 18-36", 10-12" spread.

DAHLIA — *Annual*

75-90 Days. Seed Dahlias offer a unique blend of colors, forms, and sizes - making each new bloom a delightful surprise. A fun and rewarding garden addition, they produce an abundance of vibrant blooms from mid-summer to frost.

Watercolour Mix

An affordable and enjoyable way to bring a diverse selection of dahlias to your cut flower garden. In our trials, this mix produced the highest percentage of double blooms and the greatest variety. Sturdy, uniform plants yield strong stems for cutting, while the tubers from your favorites can be harvested at the end of the season—an economical way to expand your collection year after year. Mix will be an assortment of 2-3" single, semi-double and double flowers. Height 36-48", 18-24" spread.
24369 Raw seed: 50 sds $3.52; 250 sds $6.95; 1M sds $20.00

DUSTY MILLER, EUCALYPTUS

See Foliage & Pods pages 208-209

DIGITALIS *(Foxglove)* — *Biennial/Perennial*

110-160 Days. Large, tubular, speckled, upward-facing florets populate each spike for an elegant appearance. Gardeners and floral designers will love this gorgeous alternative to Delphinium for tall spiked flowers.

Camelot Mix F1

The first hybrid foxglove on the market, giving you uniformity in plant habit, flowering, and high germination rate. Zones 5-9. Height: 42-48", 12" spread.
20022 Pelleted seed: 25 sds $6.52; 100 sds $13.34; 500 sds $45.95

Candy Mountain F1

A rare first! This is the first foxglove with upward-facing blooms. Plants will flower from June through August in rose shades. Zones 4-9. Height: 48", 12" spread.
20838 Raw seed: 500 sds $21.34; 1M sds $39.66

ECHINACEA *(Coneflower)* — *Perennial*

120-160 Days. Due to its prairie heritage, Echinacea thrives in hot and sunny conditions and withstands drought conditions. Cut flower producers will like it for both fresh blooms and the unique texture of the cone heads.

Artisan™ Red Ombre F1

The blooms on this first year flowering echinacea open red and soften as they mature. Enhanced seed results in faster and more uniform germination. Plant structure is full and high branching. Zones 4-10. Height 24-34", 10-25" spread.
23792 Raw seed: 25 sds $40.45; 100 sds $114.03; 500 sds $530.10

Cheyenne Spirit Mix

First year flowering in shades of red, orange, purple, scarlet, cream, yellow, and white. Zones 4-10. Height: 18-30", 10-20" spread.
22467 Raw seed: 10 sds $8.83; 100 sds $47.32; 500 sds $218.30; 1M sds $358.70

PollyNation Mix

This first-year flowering echinacea sports large flowers in striking colors. Mix of Magenta, Orange Red, White, and Yellow. Zones 4-9. Height: 24-28'', 10-20" spread.
65253 Raw seed: 100 sds $46.79; 500 sds $216.00

Primadonna® Deep Rose

Large, 5-6" daisy-like lavender rose flowers with a russet central button. Zones 3-8. Height: 32-36", 12-18" spread.
02548 Raw seed: 250 sds $15.96; 1M sds $54.84

All-America Selections Winner · Grower Favorite · 2027 Introduction

POWWOW SERIES
This series has a strong following with growers, retailers, landscapers, and gardeners. Genetically short plants reduce the need for PGR's. Packed with more flowers per plant, they are quicker to bloom than any other seed echinacea. Zones 3-9. Height: 16-24", 12-16" spread.
21940 White: pure white with golden yellow center
21891 Wild Berry: vibrant deep rose/purple. Borders on iridescent
Raw seed: 100 sds $26.92; 500 sds $124.80

ECHINOPS *(Globe Thistle)* — *Perennial*
330-365 Days. A perennial staple for both bedding and cuts, the flowers can be cut and sold either fresh or dry. The bristly quality of the globular flower heads give additional texture in mixed bouquets.

Ritro
This long lived perennial is both cold and heat tolerant, adapting well to a wide variety of soil types. Will bloom it's second year and becomes more productive with every new season. Violet-blue. Zones 3-8. Height: 24-26", 12-18" spread.
09578 Raw seed: 100 sds $5.19; 500 sds $19.50

GOMPHRENA *(Globe amaranth)* — *Annual*
70-90 Days. As a cut flower, gomphrena can be sold to both wholesale and retail markets. Designers will enjoy the small pops of color along with the nice texture. Flowers are produced from summer to early fall and are great for cutting and drying. **Avg. seeds/lb. = 90,000.**

C. globosa 13M sds/oz.

AUDRAY SERIES
Globular, semi-clean seed, 1½" long flower heads. Height: 20-24", 10" spread.
21655 Pink: medium to pale pink.
21656 Purple Red
22212 White
22211 Mix: mix of above varieties and Bicolor Rose.
Raw seed: 250 sds $14.26; 1M sds $49.64

G. haageana 6.8M sds/oz.

QIS Mix
Rubbed seed. Mixture of carmine, lilac, pink, red, orange, purple, rose, and white. Height: 24-26",10" spread.
08184 Raw seed: 250 sds $6.51; 1M sds $16.09

G. species

Fireworks
Unique intense hot pink flower heads are open in appearance. Height: 18-22", 10-12" spread.
21657 Raw seed: 100 sds $29.01

GYPSOPHILA *(Baby's Breath)*
Well known as an accent to roses, giving an airy feel to arrangements. Though this flower goes in and out of trend, many consumers love the effect of a cloud of baby's breath.
Avg. seeds/lb.=400,000.

Covent Garden — *Annual*
50-70 Days. Clusters of bright white flowers. Height: 20-24", 12-16" spread.
02577 Raw seed: 500 sds $6.69; 1M sds $9.76; 5M sds $41.00

Double Snowflake — *Perennial*
90-110 Days. Masses of tiny double white flowers. Zones 6-9. Height: 30-36", 15-20" spread.
02578 Raw seed: 500 sds $7.24; 1M sds $12.58; 5M sds $57.50

FLAMENCO

MARIACHI SERIES

MARIACHI 2 BLUE F1

MARIACHI 2 CARMINE F1

MARIACHI 2 PINK F1

MARIACHI 2 PURE WHITE F1

KALE, ORNAMENTAL — *Annual*

100-110 Days. While kale is generally known as an edible foliage, for a novelty item peek at these cut flower types! Used extensively in seasonal flower arrangements to add color and texture. Plants can be spaced close together for high density production in fields, greenhouses, or high tunnels. Keep in mind color changes when temperatures fall below 55 degrees. Height: 20-36", 4-6" spread.

CRANE SERIES F1

Multi-toned flat leaf textured flower heads.
20622 Bicolor: white head with rose center.
20623 Pink: medium pink.
20414 Red: dark red.
20416 White: creamy white shades.
Raw seed: 50 sds $6.81; 250 sds $15.04; 1M sds $45.51

CRANE FEATHER SERIES F1

The unusual feather-leaf cut texture brings a contemporary flair.
23209 King: white.
23210 Queen: red.
Raw seed: 100 sds $18.41; 500 sds $81.35; 1M sds $129.60

CRANE RUFFLE SERIES F1

Combine the round-leaf of Crane and serrated leaves of Crane Feather to get an elegant ruffled leaf bringing an elegance to the kale market.
24065 Bicolor
24066 Red
24067 Rose
24068 White
Raw seed: 100 sds $17.32; 500 sds $75.95; 1M sds $113.90

FLARE™ SERIES F1

All of what you love from an ornamental kale with delicate ruffles along the edges! Choose thewhite forseasonally dyed blooms.
23523 Rose: rose pink.
23349 White: clear white.
Raw seed: 100 sds $17.72; 500 sds $78.45; 1M sds $126.30

LUCIR SERIES F1

Similar leaf style of the Crane Series with a glossy leaf.
21956 Rose: rose pink.
21957 White: creamy white shades.
Raw seed: 50 sds $16.57; 100 sds $29.01; 500 sds $124.30; 1M sds $174.00

KNIPHOFIA — *Perennial*

190-250 Days. Tall stems support 8" full spikes. Great as a focal bloom with a tropical flair. A first-year flowering perennial with peak production in its second season.

Flamenco
Shades of yellow, orange, and red. Zones 5-9. Height: 32", 36" spread.
03778 Raw seed: 500 sds $45.44

LISIANTHUS — *Annual*

154-168 Days. The popularity of the Lisianthus flower continues to grow and grow. Consumers love the 'Rose Without Thorns' with its elegant double and fringed flower types. Choose between three popular series, suitable for winter sowing and early spring to summer harvest. Each of these series brings you excellent vase life with thick petals that reduce botrytis issues and hold well for your customers. Whether growing from seeds or plugs, visit sakataornamentals.com for lisianthus culture and production tutorials.

MARIACHI SERIES F1

Featuring extra-double (actually quadruple), large 2-2¾" rose-shaped flower heads. Group 2. Height: 30-38", 8-12" spread.
08172 2 Blue
20902 2 Carmine
08176 2 Pink
08177 2 Pure White
Pelleted seed: 250 sds $16.35; 1M sds $62.32

All-America Selections Winner · Grower Favorite · 2027 Introduction

Cupid 3 White F1
Exceptional doubleness gives this lisianthus a remarkably rose-like appearance. Sturdy stems, supportive flower necks, 3" blooms, and a long vase life make it a must-have addition to any lisianthus offering. Height 27-35", 6-8" spread.
24367 Raw seed: 250 sds $25.26; 1M sds $96.00

ROSANNE SERIES F1
Featuring double uniquely antique colored, large 2-3" rose-shaped flowerheads. Group 1, 2, and 3. Height: 30-38", 8-12" spread.

59422 1 Black Pearl
24062 2 Clear Green
23893 3 Brown
Pelleted seed: 250 sds $29.91; 1M sds $113.96

VOYAGE 2 SERIES F1
Featuring uniquely fringed, large 3" rose-shaped flower heads. Group 2. Height:30-38", 8-12" spread.

24010 2 Blue
24011 2 Champagne
23671 2 Deep Rose
24063 2 First Love
24012 2 Green
24013 2 Lavender
23706 2 Pink
24291 2 Pure White
Pelleted seed: 250 sds $30.65; 1M sds $116.84

LILIES
Available online at harrisseeds.com

GROWING LISIANTHUS FROM SEED IS NOT RECOMMENDED FOR NOVICE SEED STARTERS.

Though lisianthus may not be difficult to germinate (7-14 days), they are difficult to grow on to transplant for two reasons.

Time: Expect to maintain the plants for 8-10 weeks before transplanting. Letting them dry out or over watering just once can cause issues, so plan accordingly.

Temperatures: To avoid rosetting and poor blooming, keep cool temperatures at night 55-59°F and days between 72-80°F until transplant. This generally can not be maintained on a light stand.

Order plugs to save from the stress of growing Lisianthus.

We offer high quality lisianthus from two grower specialists. As lisianthus is very moody, lisianthus plugs may be different sizes each season depending on natural light during the plug production, as well as dependent on the variety being grown.

Raker-Roberta's: 36 Strip, 160 Tray, and 285 Trays, 11-14 weeks old. (Order a minimum of 13-16 weeks in advance)

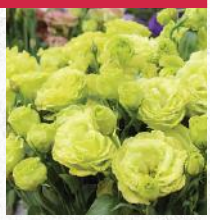

Gro 'N Sell: 125 & 210 Trays - 11-12 weeks old (Order a minimum of 14 weeks in advance)

GIANT IMPERIAL MIX ORGANIC

HIDCOTE BLUE

LAVANCE DEEP PURPLE

CRAZY DAISY

LARKSPUR — *Annual*

85-110 Days. A cool season favorite for cut flower growers selling wholesale and retail. Attractive delphinium-like flowers are produced on vigorous upright strong-stemmed plants.

Giant Imperial Mix Organic
A delightful mix of bright pinks, white, blues, and royal purples. Support plants against the wind as they grow. Height: 36-48", 10-12" spread.
20160 Organic seed: 50 sds $5.80; 250 sds $19.74; 1M sds $52.52; 5M sds $237.05

LAVENDER — *Perennial*

100-110 Days. Popular fresh or dried, lavender is a must for all cut flower gardens and farms. Not a fan of wet feet, choose a field spot that drains well for best success.

RUSSELL MIX

SNOWSTORM

GROUND CONTROL

COCO SERIES

COCO DEEP ORANGE, YELLOW, AND GOLD

Hidcote Blue
Attractive purple-blue flowers contrast nicely with grey-green foliage. Zones 5-9. Height: 18-22", 15-20" spread.
09597 Raw seed: 500 sds $9.57; 1M sds $17.76

Lavance Deep Purple
The deepest purple-blue lavender flowers available from seed that does not bleach in the summer sun. Zones 5-9. Height: 12-18", 12-20" spread.
23200 Raw seed: 250 sds $17.91; 1M sds $61.16

LEUCANTHEMUM

(Shasta Daisy) — *Perennial*

280-365 Days. This upscale version of commonly used mums adds interest to cut flower offerings, ensuring high sales potential.

Crazy Daisy
Fully double 2½" creamy white flowers envelop a sharp contrasting yellow eye, presenting an overall fluffy appearance. Zones 4-9. Height: 24-28", 20-24" spread.
03808 Raw seed: 500 sds $20.10; 1M sds $37.44

LUPINE — *Perennial*

85-126 Days. A memorable sight, these medium sized spikes of pea-like blooms add a nice structural shape to gardens and bouquets. They thrive in cool climates and find it difficult to survive in areas with extremely hot summers..

Russell Mix
A longtime favorite! Mix of red, pink, white, and purple shades. Zones 3-6. Height: 24-36", 12-18" spread.
02810 Raw seed: 50 sds $3.00; 500 sds $12.62; 1M sds $22.10; 5M sds $98.20

MARIGOLD — *Annual*

100 Days. Long stemmed marigolds add bold, bright color to bouquets at Farmers Markets and roadside stands. The large, vibrant flower heads are also ideal for creating garlands, wreaths, and other displays that play a central role in many cultural celebrations.

COCO SERIES F1
COCO marigold offers long stems and big bold blooms. Suitable for tight space production and can be grown in the field or under cover. Development can be manipulated with disbudding or pinching. It's always a fiesta with COCO's fully double 4" flowers in 3 fantastic colors. Height: 24-36", 24" spread.
23743 Deep Orange
23744 Gold
23745 Yellow
Detailed seed: 50 sds $8.64; 250 sds $24.53; 1M sds $70.32

Snowstorm
White? That's debatable. Beautiful? Absolutely! This pale-yellow African marigold possesses not only a unique color but adds an almost carnation or mum like texture to designs. While traditionally thought of as a bedding variety, with tight spacing, Snowstorm grew to 36" tall in our trials. Height 15-20", 20-24" spread.
24377 Raw seed: 50 sds $4.63; 250 sds $15.95; 1M sds $52.00

Ground Control
An effective variety of marigold for natural control of root nematodes. Best used as a cover crop and with crop rotation prior to planting a lesion nematode susceptible crop. A growth period of at least 100 days prior to incorporation is recommended for maximum nematode suppression and organic matter accumulation. Bright gold, single flowers will also attract beneficial insects. Tagetes patula
Height 30-40", 20-24" spread.
24323 Raw seed: 1M sds $5.95; 10M sds $15.95; 20M sds $30.00

All-America Selections Winner · Grower Favorite · 2027 Introduction

MATRICARIA — *Perennial*

100-110 Days. This is a beautiful, daisy-like flower that is quick to mature. Plant multiple successions to guarantee blooms for months. Can be grown in both an open field or a hightunnel.

VEGMO SERIES F1

Matricaria vegmo has a fragrant foliage accented with delicate blooms ideal for use as a filler in bouquets, with a good post-harvest life. Single blooms have white petals and a standout yellow center, this accent is great for seasonal bouquets.Height: 28-36", 12-15" spread.
24199 Single: Single blooms have white petals and a standout yellow center, this accent is great for seasonal bouquets.
24200 Snowball: Double white blooms are small, but each stem packs a punch with many blooms, making this a great filler.
24201 Yellow: Double yellow blooms bring a different color to filler flowers.
Pelletted seed: 100 sds $7.33; 500 sds $19.17

ORLAYA — *Annual*

65-70 Days. An interesting novelty cut flower to add to your cut flower repertoire. Orlaya produces large lacey umbels that are fragrant for extra appeal. Long vase life.

White Finch

Large 3½" white lacey flowers. Height: 14-16", 20-22" spread.
22960 Raw seed: 250 sds $8.49; 1M sds $29.24

PAPAVER (*Poppies*) — *Perennial*

85-100 Days. Iceland poppies are the best for cuts, offering tissue paper-like blooms. In areas with high heat, grow as an annual, as they prefer cool temperatures.

P. nudicaule

Champagne Bubbles

This hybrid of Icelandic poppy grows 12-18" tall and has a wide range of bright colors on 2-4" blossoms. A vigorous grower, they have a longer blooming season than oriental poppies. Preferring cooler temperatures these can be fall planted to complement your pansies. A short lived perennial, suitable for zones 2-5. Height: 12-18", 6-8" spread.
09628 Raw seed: 250 sds $8.40; 1M sds $28.60

PTILOTUS — *Annual*

Native to central Australia, ptilotus is not only attractive but exhibits both heat and drought tolerance. Large 3-4" bottlebrush spiked start out glistening silver, then gradually darken to neon pink near the tips.

Matilda

Meet Joey's beautiful, more vigorous and sassy sister. This high impact tropical looking cut flower handles high heat production. Visit benary.com to learn about selecting for best stem production. Height: 24-28", 12-14" spread.
24077 Raw seed: 25 sds $18.69; 100 sds $48.49; 500 sds $219.00

Indian Summer

Extra-large single flowers in a charming golden yellow. Ideal for 6" or larger containers. Height: 36-42", 18-24" spread.
02402 Raw seed: 250 sds $8.83; 1M sds $26.60.

Irish Spring

Large 5-7" blooms with yellow petals and a sharp contrasting green eye. Excellent in 6" pots or larger. Height: 30-36", 18-24" spread.
20346 Raw seed: 250 sds $9.27; 1M sds $27.96

Moppets

This is a selection of the Gloriosa Double Daisy with more doubling, giving a muppet effect to its golden flowers with an occasional dark disc. Height: 24-36", 8-12" spread.
24219 Raw seed: 250 sds $33.03; 1M sds $113.96

Prairie Sun

Pale yellow tipped golden 6-8" flowers with a pale green center. Height: 28-32", 18-24" spread.
03969 Pelleted seed: 25 sds $7.69; 250 sds $27.91; 1M sds $75.60

Sahara

From burgundy to bronze to copper these mum like blooms are highly doubled. Height: 24-36", 8-12" spread.
24220 Raw seed: 250 sds $25.29; 1M sds $88.60

Sputnik

Medium 4" golden yellow blooms with lush mahogany center. Height: 30-36", 18-24" spread.
23819 Raw seed: 250 sds $7.94; 1M sds $28.36

Perennial

Goldblitz

An economical input option for natural daylength production of the popular perennial rudbeckia. No need for special treatments and it also puts out more stems than market standards. Zones 3-9. Height: 24-28", 14-18" spread.
24078 Raw seed: 25 sds $8.51; 100 sds $20.99

Goldsturm

110-170 Days. Bright golden-yellow ray flowers with dark centers. Zones 3-9. Height: 30", 20-25" spread.
03781 Raw seed: 250 sds $13.52; 1M sds $47.96

All-America Selections Winner Grower Favorite 2027 Introduction

SALVIA — *Annual*

100-120 Days. An interesting addition to cut flower offerings that can help supplement the seasonality of lavender.

Big Blue

Large 8-10" dark blue spikes are big and bold on thick sturdy stems. Height: 24-36", 18-20" spread.

23552 Raw seed: 50 sds $24.89; 100 sds $40.00; 500 sds $181.00

Evolution Violet

True violet in color, the abundant 6-7" flower spikes are prolific on healthy bushy plants. Height: 18'', 12-14" spread.

20348 Raw seed: 500 sds $14.23; 1M sds $26.48

Tricolor Tall Mix

Also known as Painted Sage, this easy-to-grow, versatile plant adds an unusual splash of color to fresh arrangements and dries beautifully for year-round use. Aromatic foliage is crowned with leaf-like bracts of white, bright pink, and striking true blue. Height 24-28", 14-18" spread.

24371 Raw seed: 250 sds $3.77; 1M sds $14.00

SCABIOSA

80-110 Days. Delicate pincushion flowers are produced on long stems giving a great texture and pop of color for many types of designs.

Annual

QIS Mix

Large 2" blooms in pink, purple and white shades. Height: 28-31", 18-20" spread.

All-America Selections Winner · Grower Favorite · 2027 Introduction

STATICE — *Annual*

90-120 Days. Statice is a reliable cut flower for growers selling roadside or direct to designers, offering a long-lasting feathery look in vases. Flowers can be grown in the greenhouse or the field, and sold fresh or dried.

Hipster™ Mix

Limonium is a high demand filler for gardens, a staple for dried production and Hipster's strong stems make it optimal for pot and container production. The intense flower colors grow on dark dense stems and leaves making it a striking addition. The mix consist of the colors: white, yellow, rose and blue. Height: 20-28", 12-16" spread.

24208 Raw seed: 500 sds $12.43; 1M sds $19.93; 5M sds $76.15

HIPSTER MIX

Pastel Shades

Long lasting when used as a fresh cut flower and provides a nice color when used in dried arrangements. This mix has flowers ranging from white to shades of pink, mauve, lavender, and purple. Pastel Shades is early blooming as it is not daylength sensitive. Height 28-32", 12-16" spread.

24353 Raw seed: 500 sds $7.94; 1M sds $10.61; 5M sds $45.15

PASTEL SHADES

Suworowii Pink Pokers

Often referred to as Russian Statice, this is a unique variety that offers interest, texture, and a striking color. The long elegant panicles of carmine-rose work well in gardens, cut arrangements and dried crafts. Height: 30-33", 12" spread.

03785 Raw seed: 500 sds $3.00; 1M sds $5.22; 5M sds $23.80

SUWOROWII PINK POKERS

KATZ HI DOUBLE WHITE

DOUBLE MIXED COLORS

STOCK — *Annual*

90-100 Days. A wonderful old-fashioned bloom that is favored for its slightly spicy fragrance. Stock is great for greenhouse cut flower production, but does well in cool season field production.

KATZ SERIES

A high percentage of double flowers with a shorter crop time. Heat and cold tolerance allow for scheduled blooming for early and late season. High tunnel production allows for best scheduling and fragrance. Height: 32", 5" spread.

KNOWING YOUR MARKET
is the key to variety selection.

Pollen-Free vs Sunflowers with Pollen
Modern sunflowers are bred to be malesterile (pollen free) to extend vase life and a provide a clean flower head appearance that wholesalers and florists demand. Growers looking for a lower cost point find success with sunflowers with pollen.

POLLEN-FREE VS. SUNFLOWERS WITH POLLEN

Single Stem vs Branching
Single stem varieties are best for high density plantings and are programmable for consistently beautiful flowers on tall stems. Succession planting will be needed for continuous harvest throughout the season. Branching varieties produce multiple shorter stems over the season and are ideal for mixed bouquets and roadside sales.

BRANCHING VS SINGLE STEM

Sunflowers

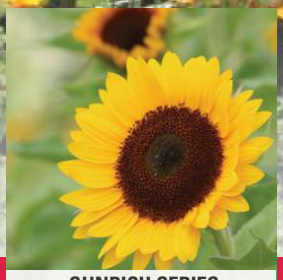

If you can grow sweet corn, then you can grow sunflowers! This easy to grow flower is a favorite cut among vegetable growers for its instant recognition, high profit margins, and versatility. Multiple colors are available for both summer and fall sales, and a recommended succession planting below provides blooms all season long.

PREMIER SERIES
(45-60 days)

SUNRICH SUMMER SERIES
(50-65 days)

SUNRICH SERIES
(55-70 days)

Succession Planting
Continual harvest can beachieved by succession planting your favorite varieties every 7-10 days. For a second option, choose varieties with different maturity dates and plant at the same time to minimize your plantings to every 20-25 days.

All-America Selections Winner · Grower Favorite · 2027 Introduction

SUNFLOWER — *Annual*

TALL CUT FLOWER POLLEN-FREE TYPES

Modern sunflowers are bred to be male sterile (pollen free) to extend vase life and a provide a clean flower head appearance that wholesalers and florists demand. Nothing expresses the essence of summer better than a bunch of bright, clean sunflowers! Single stem varieties are best for high density plantings to produce tall stems, while branching types produce multiple shorter stems over the season and need more spacing in the field. See quick facts chart on page 201 for seeds per pound and to compare varieties.

Copper Queen F1
55-65 Days. Golden yellow petals are 'dusted' with a layer of translucent cinnamon-red, giving the large flowers a rich orange appearance that contrasts nicely with the clean dark brown disks. Branching. Height: 5-6'.
22873 Raw seed: 250 sds $21.96; 1M sds $72.78; 5M sds $335.90; 10M sds $630.97

Golden Ray
50-55 Days. This unique sunflower sets 4.5"-5.5" blooms up and down the stalk in a gladiolus like pattern creating an almost single stem bouquet when the top flower is removed. Excellent for a cut flower as well as a garden ornamental. Single stem. Height: 5'.
24194 Raw Organic seed: 250 sds $16.73; 1M sds $59.64; 5M sds $271.19

Helios Flame F1
45-50 Days. A dark mahogany ring towards the center adorns golden yellow petals and complements a clean dark disk. Single stem. Height: 3½-4'.
22959 Raw seed: 50 sds $10.88; 250 sds $25.18; 1M sds $64.19; 10M sds $540.14

Infrared Mix F1
60-70 Days. Ranging in shades from soft red to a very dark red plus some red bicolors, flowers are single with dark central disks. Branching. Height: 6'.
03498 Raw seed: 50 sds $4.41; 250 sds $16.01; 1M sds $30.92; 5M sds $139.70

Magic Roundabout Mix F1
75-90 Days. A delightful mix of uniquebicolor blooms in pastel shades. A great mix, all with similarbloom times, so all colors at once! Branching. Height: 4-6'.
24096 Raw seed: 250 sds $22.55; 1M sds $64.22; 5M sds $290.30

Max Sunshine F1
55-80 Days. Golden orange with dark disk stands out with the triple rows of petals. Spring plantings are quicker to bloom. Expect the later days for fall production. Single stem. Height: 5-7'.
24018 Raw seed: 250 sds $12.84; 1M sds $41.66; 5M sds $188.75; 10M sds $351.00

Monet's Palette F1
65-80 Days. A beautiful mixture with colors ranging from yellow to reddish bicolor. Branching. Height: 6'.
03593 Raw seed: 250 sds $9.40; 1M sds $32.00; 5M sds $140.75; 10M sds $232.00

22506 Red: muted red petals with dark brown disk.
20353 Red & Lemon Bicolor: lemon and mahogany-red petals with dark brown disk.
Raw seed: 250 sds $13.95; 1M sds $41.47; 5M sds $185.55; 10M sds $355.00; 20M sds $659.96

PROCUT® WHITE SERIES F1

50-60 Days. Gorgeous clean white petals bring a new look to this farmer favorite. Single stem. Height: 5'.
23662 White Lite: white petals with light disk.
23350 White Nite: white petals with dark brown disk.
Raw seed: 50 sds $9.96; 250 sds $19.34; 1M sds $55.95; 5M sds $260.00; 10M sds $545.80; 20M sds $1007.80

SUNFILL™ SERIES F1

50-55 Days. A unique addition to bouquets, harvest in pre-bloom stage for a look similar to artichokes. Though they do open to bloom, the petals are quite short, so the emphasis is on the calyx and disk. Daylength neutral. Single stem. Height: 4'.
23663 Green: green toned calyx with light disk.
23664 Purple: purple toned calyx with dark disk.
Raw seed: 250 sds $17.15; 1M sds $45.95; 5M sds $212.40; 10M sds $396.70

SUNFLOWER PROCUT COLLECTION

Well known for their extensive color range and uniformity of bloom time, here is your chance to try a few of the popular ProCut varieties and save some money at the same time! Order this collection and you'll receive 250 seeds each of the following 6 ProCut varieties, priced at the 1M seed price break: **ProCut Bicolor, Brilliance, Gold Lite DMR, Orange, Red, and Red & Lemon Bicolor.**

ZOHAR F1 ORGANIC

POLLEN-FREE SUNFLOWERS (CONT.)

Full Sun F1

65-75 Days. Large 4-6" golden flowers with a clean dark disk. Ideal for southern growers, winter production, or summer production, which produces taller stems. Single stem. Height: 5-7'.
24015 Raw seed: 250 sds $20.09; 1M sds $50.27; 5M sds $227.20; 10M sds $421.75; 20M sds $791.06

Gold Rush

45-55 Days. This early bloomer flowers quickly, producing numerous branches of perfect golden orange flowers with a rich dark disk. Branching. Height: 4-6'.
23239 Raw seed: 50 sds $5.50; 250 sds $8.69; 1M sds $25.82; 5M sds $122.15; 10M sds $234.52

SUNRICH SERIES F1

55-70 Days. The hallmark of pollen-free sunflowers for cutting, Sunrich varieties continue to be market leaders. Spaced 6" apart for 5-6" diameter flowers. Daylength neutral. Single stem. Height: 4'.
03607 Gold: golden yellow with yellow green disk.
03502 Lemon: lemon yellow with dark disk.
23224 Lime: yellow petals with fresh green disk.
Raw seed: 250 sds $17.94; 1M sds $54.48; 5M sds $234.65; 10M sds $462.80; 20M sds $848.00

Sunrich Orange DMR F1

65-85 Days. Sunrich Orange DMR (Downy Mildew Resistant) provides substantial benefits with high yield results and a reduction of chemicals, yet retains all the other characteristics of top selling cut sunflower variety Sunrich Orange. Single stem. Height: 4'.
22969 Raw seed: 250 sds $19.77; 1M sds $69.25; 5M sds $310.50; 10M sds $567.02; 20M sds $1033.10

SUNRICH SUMMER SERIES F1

50-65 Days. Expect the same gorgeous blooms you get with the Sunrich series, but blooming 1-2 weeks earlier. That is right! Plant alongside the Sunrich series and achieve more harvest from one planting. Single stem. Height: 4-4½' .
21682 Lemon: lemon yellow with dark disk.
22852 Limoncello: vibrant lemon yellow petals and creamy lemon tips with dark disk.
20517 Orange: golden orange with dark disk.
23661 Provence: deep golden orange with dark disk.
Raw seed: 250 sds $16.95; 1M sds $53.81; 5M sds $232.75; 10M sds $459.95; 20M sds $895.96

VINCENT SERIES F1

55-70 Days. Less sensitive to daylength than other popular varieties! Growers enjoy greater flexibility in programming for high quality cuts for early, mid and late season sales. An extra ring of rounded overlapping petals provide better flower fill, bringing a higher percentage of salable stems. Daylength neutral. Single stem. Height: 5-6'.
22854 Choice: Golden orange with dark brown disk.
22855 Fresh: Golden orange with crisp green disk.
Raw seed: 50 sds $8.13; 250 sds $18.21; 1M sds $43.38; 5M sds $195.15; 10M sds $379.96; 20M sds $695.96.

Zohar F1 Organic

40-50 Days. Crisp clean orange-gold petals and a dark disk offer 4-6" flowers that can be up to 7-8" in diameter if plants are spaced further apart. For organic producers, it is the best variety to grow that will be closest to market leaders Sunrich Orange and Pro Cut Orange. Single stem. Height: 3-4'.
20910 Organic seed: 50 sds $8.13; 250 sds $18.21; 1M sds $43.38; 5M sds $195.15; 10M sds $380.00; 20M sds $696.00

All-America Selections Winner · Grower Favorite · 2027 Introduction

FOR EASY TO GROW FLOWER DISPLAYS

Whether a garden center, farm market, or agritourism site, flower fields attract attention of drivers and passersby. In the day of selfies, a simple backdrop of flowers gives an ideal photo opportunity… just remember to join in and get social!

To fill a large space or create a maze, you have lots of options. Reaching well over 10' tall, the hedge types (page 200) give a stunning visual impact. Shorter varieties (under 8') are ideal for walls of blooms, fields of color, and backdrops of beauty. For large displays, we recommend using economical varieties including black oil and varieties with pollen (pages 198-200). For u-cut or displays to last the whole season, choose the Next Gen **Sunfinity®** (page 200). Grows like a zinnia (cut and come again,) producing up to 40 stems per plant.

SUNFLOWER TIPS

Sow Depth: ½" deep (up to 1" with sandy soil).

Soil Temperature: 70-80°F.

Field Spacing: Single Stem: 4-9"; **Branching:** 12-24"

Harvest: When petals begin to lift from the disk.

Plant large quantities with ease

Most seeders or planters plant at 9" with 36" spacing between the rows. Use this chart to help you determine seeds per acre. Single stem varieties can go as close to 4-9" in the row, while branching varieties should be between 12 and 24" in the row.

Number of plants per acre

DISTANCE BETWEEN ROWS	DISTANCE BETWEEN PLANTS IN THEROW 6"	9"	12"	18"	24"
12"	87,120	58,080	43,560	29,040	21,780
15"	69,696	46,464	34,848	23,232	17,424
18"	58,080	38,720	29,040	19,360	14,520
21"	49,782	33,189	24,891	16,594	12,446
24"	43,560	29,040	21,780	14,520	10,890
36"	29,040	19,360	14,520	9,680	7,260
48"	21,760	14,520	10,880	7,253	5,440

Season of Sales

With more diversity in the look of sunflowers, maximize your sunflower sales by selecting varieties based on the sales season. Spring sales have a focus on pastel or light shaded petals combined with light colored disks. As you move into summer the warm brown disks with brightly colored yellow or gold petals take over the marketplace. For fall, choose flowers in warm shades of burgundy, maroon, or bi-colors, all with very dark brown centers.

Speed up your sowing!

For speed and ease use the Earthway Precision Garden Seeder!

Farmers have seen great success using the Earthway seeder, and multiple plates are useful for direct sowing sunflowers. Each plate accepts different size seed and drops the seed at different spacing. For more control over spacing, skip seed drops (apply hot glue to fill holes in plate) or increase the space between your rows helping achieve optimal spacing. See page 216 for full product details including additional planter plates.

Beet Plate: 3.6" spacing **Cucumber Plate:** 9" spacing **Popcorn Plate:** 9" spacing

SORAYA

TAIYO ORGANIC

VALENTINE

TALL CUT FLOWER TYPES WITH POLLEN

These sunflowers produce pollen, typically branch to create secondary stems, and are generally less expensive than the pollen-free types. Though well known for mixed cut flower bouquets when left to fully mature, they can be harvested for edible seeds or left in the garden as a natural bird feeder. See quick facts chart on page 201 for seeds per pound and to compare varieties.

Autumn Beauty Mix Organic

75-90 Days. Attractive 4-5" flowers in a color range including shades of yellow, bronze, and red. They bloom over a long season and work well as a cut item. Branching. Height: 5-7'.

03500 Organic seed: 50 sds $3.73; 250 sds $9.72; 1M sds $15.56; 5M sds $68.00; 10M sds $96.62

Evening Sun Organic

75 Days. Dark centers are ringed by a wide range of vibrant outdoor colors, reminiscent of a setting sun. The 6-8' tall plants make a stunning show when planted as a screen or back drop in your garden or field. Branching. Height: 6-8'.

23274 Organic seed: 50 sds $3.03; 250 sds $5.83; 1M sds $11.57; 5M sds $50.60

Goldy Double F1 Organic

45-50 Days. This longtime favorite is available in organic seed! Large flowers open up semi-double, then mature to fully double, so they can be cut and sold in different stages of maturity. Branching. Height: 5-6'.

22574 Organic seed: 50 sds $4.60; 250 sds $11.37; 1M sds $29.32; 5M sds $140.17; 10M sds $234.86

Ring Of Fire

70-75 Days. Attractive, stable bicolor patterned flowers are 5-6" single petals that develop dark red around the base with golden yellow tips and a dark central disk. Branching. Height: 3½-4'.

03499 Raw seed: 50 sds $6.13; 250 sds $15.48; 1M sds $35.36; 5M sds $159.15

Soraya

95-100 Days. Rich orange 4-6" flowers with dark centers are abundant on branching plants. Each plant yields up to 25 stems with lengths nearing 20". Branching. Height: 6'.

03596 Raw seed: 50 sds $6.95; 250 sds $9.95; 1M sds $27.95; 5M sds $129.95; 10M sds $263.25

Taiyo Organic

70 Days. This handsome Japanese heirloom produces sturdy single flower heads. Can be used for cut flowers or for edible seed if allowed to mature more fully. Single stem. Height: 5-6'.

23275 Organic seed: 50 sds $5.50; 250 sds $9.13; 1M sds $25.35; 5M sds $107.75; 10M sds $213.28

Valentine

70-80 Days. This lovely sunflower is most noted for its pale lemon-yellow flowers with a distinctive dark disk in the center. Branching. Height: 5'.

03511 Raw seed: 50 sds $2.03; 250 sds $7.57; 1M sds $20.22; 5M sds $94.90

All-America Selections Winner · Grower Favorite · 2027 Introduction

ASTRA SERIES

70-82 Days. Semi double flowers with densely petaled centers, branching habit with multiple heads per plant. Perfect for cutting. This series has very little pollen. Branching. Height 4'.

24261 Astra Gold
24262 Astra Yellow Brown

Raw seed: 50 sds $3.95; 250 sds $13.54; 1M sds $23.90

SOLUNA SERIES

75-100 Days. For gardens and flower farmers looking for sunflowers with a more airy texture, in smaller blooms check out this species. Though the look is more wild, the branching habit gives consistent long stems that flower freely all summer long. Branching. Height: 4-5'.

24209 Cream: cream colored with dark discs.
24210 Gold: dark discs are surrounded by golden blooms with a bronze/red ring.
24211 Lemon: soft yellow with dark discs.
24212 Bronze: multi-hued bronze with dark disc, a must see!
24213 Mix

Raw seed: 250 sds $13.54; 1M sds $23.90; 5M sds $108.00

Cut flower display

With six individual buckets, you can offer customers a diverse selection of flowers, from asters to zinnias, making it easy for them to find their favorite blooms. The stand also helps keep the flowers fresh by providing a stable and upright position for each bucket, enhancing their longevity. Additionally, the aesthetic appeal of the stand can draw customers in and create a memorable shopping experience, ultimately boosting sales.

AMERICAN GIANT F1

PEREDOVIK

MAMMOTH

SUNFINITY YELLOW DARK CENTER F1

TITAN ORGANIC

TALL HEDGE TYPES

These giant sunflowers grow between 8-15' in height. Usable as an effective screen or garden background and a must for homeowners who are itching to grow the tallest sunflower in the neighborhood! When dry, the seed heads can be cut and sold as is for wild bird food. See quick facts chart on page 201 to compare varieties.

American Giant F1

65-80 Days. The sturdiest of the 'giant' types, no worries about them falling over. With heads as wide as 12", dry and sell as a natural bird feeder. Branching. Height: 8-15', 36-42" spread.
Avg. seeds/lb. = 4,500.
22870 Raw seed: 50 sds $5.37; 250 sds $16.83; 1M sds $33.12

Mammoth

65-80 Days. Impressive flower heads that are often 12" across have brown centers surrounded by yellow petals. Branching. Height: 8-10', 36-42" spread.
Avg. seeds/lb. = 3,000.
00747 Raw seed: 50 sds $3.95; 250 sds $5.95; 1M sds $7.97; 10M sds $51.09; 20M sds $95.56

Titan Organic

65-80 Days. A varietywith one of the largest heads you will ever grow; flower heads canreach up to 24" across! Extra-large seeds are great for roasting. Singlestem. Height: 12-14', 36-42" spread.
Avg. seeds/lb. = 4,000.
23276 Organic seed: 50 sds $4.73; 250 sds $12.72; 1M sds $28.73; 5M sds $129.40; 10M sds $240.20

BLACK OIL TYPES

Need to fill a lot of space? Choose these sunflowers, wildly considered to be the best type for large displays, attracting pollinators, or feeding birds. Also a great option for dried seed heads that can be cut and sold as is for wild bird food. See quick facts chart on pg. 201 to compare varieties.

Peredovik

90-100 Days. Choose these sunflowers, wildly considered to be the best type for large displays, attracting pollinators, or feeding birds. Also a great option for dried seed heads that can be cut and sold as is for wild bird food. Branching. Height: 4-5', 36-42" spread.
Avg. seeds/lb. = 9,000.
24014 Raw seed: 250 sds $18.33; 1M sds $48.84; 5M sds $232.20; 10M sds $411.99

NEXT GEN TYPES

This next generation of sunflower offers nonstop blooming, multiple branches, and abundant flowers all season long. Choose these indeterminate plants for "mini" sunflowers ideally used for displays, in mixed bouquets, or for cut-your-own operations. See quick facts chart on page 201 to compare varieties.

Sunfinity Yellow Dark Center F1

75- 85 Days. Plant with spacing at least 15" between the plants to allow ample room for this non-stop bloomer! Sunfinity offers an airy less stiff looking option for sunflowers. Each plant with ideal fertility and moisture will produce over 50 stems. Branching. Height: 3-4', 24-36" spread.
23384 Raw seed: 5 sds $14.38; 25 sds $43.07; 100 sds $150.40; 500 sds $623.00

All-America Selections Winner · Grower Favorite · 2027 Introduction

SUCCESSFUL GROWING

Planting

Direct Sow vs Transplanting
Seed can be sown directly in the field after last expected frost, or with protection. Pre-started indoors and transplanted to field in 2-4 weeks.

Spacing

Single stem varieties are best for high density plantings to produce tall stems, while the branching types produce multiple shorter stems over the season.

Single Stem Varieties
Spacing: 4-9"
Pinching: NOT RECOMMENDED
Adjust spacing between plants to control bloom size and stem diameter to fit your market.

Spacing: 4-6". Produce small 5-6" flowers common in the floral trade.

Spacing: 7-9". Produce large 7-10" flowers ideal for bunching.

Branching Varieties
Spacing: 12-24"
Pinching: At 12-15"
Wide spacing on branching varieties allows for greater length in secondary branches. For consistent and longer stems.

Post Harvest

- Cut when the petals, or ray flowers just begin to open, before they have opened off the disc completely.
- Cut into plain water after stripping leaves.
- Transfer to a holding solution – extends life of blooms up to 4 days.
- Check water regularly. Sunflowers are heavy drinkers and can empty a bucket overnight.
- Disinfect buckets between usage, dirty buckets will shorten vase life.
- Change water daily. Sunflowers have what many growers call a dirty stem, as water quickly turns cloudy with potential for bacterial issues.

NATIVE MONARCH MIX

VERBASCUM — *Perennial*

110-125 Days. A first year flowering perennial that blooms in the spring, dies back in the heat of the summer, and then re-blooms again in the fall. Flower spikes add height to designs and are long lasting.

Southern Charm F1

Flower spikes in shades of peach, rose, and yellow, all with `bees'. Zones 5-8. Height: 24-30", 12-18" spread.
03701 Pelleted seed: 100 sds $22.76; 500 sds $100.70

WILDFLOWERS

Add a touch of color to large areas while providing a natural habitat for bees and other beneficial insects. Wildflowers are ideal for displays and are a prime choice for sowing alongside roadways, spray paths, ditch banks, or hedge rows to prevent erosion. Maximum planting rates are based on 120-140 seeds per square foot (8 to 24 pounds per acre) and are recommended when adequate soil preparation and weed control are not possible, or when maximum color is required. Visit www.harrisseeds.info/Wildflowers for more details and more mixes.

Midwest Mix

A great mix of annuals and perennials for ornamental landscaping in the midwestern U.S. IL, IN, IA, Eastern KS, KY, MI, MN, MO, Eastern NE, OH, WI. Flowers will provide color throughout the growing season. This mixture contains native species as well as non-native species that are adapted to the region. Mix includes different species of aster, centaurea, chrysanthemum, coreopsis, echinacea, gaillardia, gypsophila, liatris, lupinus, papaver, penstemon, rudbeckia, and more.
21998 Raw seed: 1/4 lb $22.19; 1 lb $65.35

Northeast Mix

A great mix of annuals and perennials for ornamental landscaping in the northeastern U.S. CT, DE, ME, MD, MA, NH, NJ, NY, PA, RI, VT, Washington D.C., VA, and WV. Flowers will provide color throughout the growing season. This mixture contains native species as well as non-native species that are adapted to the region. Mix includes different species of aster, centaurea, coreopsis, dianthus, echinacea, gaillardia, gypsophila, liatris, lupinus, papaver, penstemon, rudbeckia, and more.
21999 Raw seed: 1/4 lb $21.99; 1 lb $64.98

Southeast Mix

A great mix of annuals and perennials for ornamental landscaping in the southeastern U.S. This area includes AL, AR, northern FL, GA, LA, MS, NC, SC, TN and extreme eastern TX. Flowers will provide color throughout the growing season. This mixture contains native species as well as non-native species that are adapted to the region. Mix includes different species of aster, coreopsis, echinacea, gaura, gypsophila, linum, monarda, papaver, phlox, rudbeckia, salvia, verbena, and more.
21702 Raw seed: 1/4 lb $23.68; 1 lb $85.96

Cut Flower Mix

Looking for a great display or easy you-cut rows ideal for any vase! This mix stood out in trials with a mix of annuals and perennials including clarkia, dianthus, echinacea, gypsophila (baby's breath), larkspur, poppies, rudbeckia and much more. Flowers will provide color throughout the growing season. Plant at 10-20lbs per acre.
24097 Raw seed: 1/4 lb $20.65; 1 lb $60.39

Native Monarch Mix

This mixture of twenty highly desirable native; mostly perennial, wildflowers has been specifically curated to supply nectar sources to adult monarchs, however it would be highly attractive to a large population of pollinators. This mix is intended for use in the monarch's summer breeding range and flyway zones but would be a phenomenal addition most anywhere. Milkweeds are included to provide food for monarch caterpillars and to be utilized for egg- laying. Also contains helenium, asters, veronia, rudbeckia, solidango, silphium, helenium, liatris, bidens, coreopsis, echinacea, and others.
24098 Raw seed: 1/4 lb $62.82; 1 lb $187.35

All-America Selections Winner · Grower Favorite · 2027 Introduction

VERBENA — *Perennial*

90-105 Days. Verbena bonariensis has a whimsical and wild feel with blooms that appear to be floating above it's foliage. The stiff stems also makes it a favorite with cut flower growers. A tender perennial that tends to self-sow.

Finesse

An abundance of magenta-purple blooms cover these tall plants. Great filler for a garden border or as a cut flower in mixed arrangements. Perennial in zones 7-10. A long flowering annual in all other locations. Height: 36-48", 24-36" spread.
03702 Raw seed: 250 sds $9.99; 1M sds $29.68

FINESSE

ZINNIA — *Annual*

60-80 Days. Zinnias are a perfect choice for any cut flower grower, regardless if you're just getting started or if you are experienced. Large, colorful blooms lend cheer and texture to bouquets and floral arrangements, and come in a variety of flower sizes and blooms types. Best yet, zinnias are easy and fast growers!

BENARY'S GIANT SERIES

Known industry wide for their large dahlia flowers, Benary's Giant offer a fantastic assortment of bright vivid colors. Cut flower growers who have tried other zinnias in this class always come back to the Benary's Giant for its consistent bloom types, strong sturdy stems, and greater disease tolerance. Bloom size: 3-4". Bloom type: Double. Height: 40", 12-16" spread.
03720 Bright Pink: clear bright pink.
03732 Carmine Rose: medium rose-pink.
03735 Coral: bright coral.
03736 Deep Red: vibrant dark red.
03733 Golden Yellow: canary yellow.
03721 Lilac: light lavender.
03247 Lime: popular lemon-lime color. Height: 24-36".
03734 Orange: golden orange.
03738 Purple: dark lavender.
03722 Salmon Rose: salmon rose.
03739 Scarlet: bright scarlet.
03737 White: pure, clean white.
21691 Wine: intriguing deep burgundy w/depth of color.
03740 Mix: formula mix of all colors except Lime.
Raw seed: 50 sds $6.95; 250 sds $24.75;
1M sds $41.96; 5M sds $195.00

BOOST SALES WITH BLOOMS:

Add cut flowers to your offerings!

These nine beginner-friendly crops provide everything you need to start growing a diverse and profitable selection of cut flowers. To build a well-rounded program, focus on these three key components: focal flowers, filler or accent blooms, and lush foliage.

Zinnias

Versatile; can be used as focal and filler flowers depending on the blossom size. We offer a variety of colors, sizes, and types. Try a mixture of both bright bold shades and more subtle soft pastels.

Sunflowers

Using the chart on page 201, create the best assortment available by planting varieties to cover a wide range of days to flower. Pollen-free series such as the Procut or Sunrich are perfect for focal flowers.

Celosia

Popular for its vibrant colors and unique shapes, adding both texture and interest. There are three main types: plume, cockscomb, and wheat. Each contributing its own characteristics to flower arrangements. Celosia is also grown for its volume adding foliage.

Cosmos

A very productive, must have accent flower adding whimsy and softness with their graceful, charming blooms. Single, semi-double, and double flowers are available.

Marigolds

Our COCO series have the long stems and big blooms that florist farmers need. Large, double ruffled flowers in three eye-catching colors. Ideal for autumn displays.

Statice

This extremely long-lasting cut flower can be used either fresh or dried. The colorful paper like flower bracts are an essential element in most floral displays. Sturdy stems make for great filler, adding structure and support to bouquets.

Amaranthus

An old-fashioned favorite, popular with designers. The flowers can be stunning upright spikes or unique cascading tassels, either will spark interest and captivate. The dramatic flowers are also great for drying.

Basil

Harvested for both delicate flowers and spectacular foliage. Its vertical form, fragrance, and glossy leaves make basil a standout for adding a burst of freshness to arrangements.

Strawflowers

Know as everlasting or paper daisies, these are low maintenance, steady summer performers that produce nonstop color. Can be used as fresh flowers or preserved for dried florals. Long vase life adds to their impressive list of features.

ASPARAGUS — *Annual*

160-175 Days. Best grown in hanging baskets that can overwinter in a hightunnel or greenhouse for a full season of foliage to harvest.

Fuzzyfern Frizz

This fun texture is great for all types of floral design, this variety saves growers money, space and grief by providing a high germination rate and reliable seed supply. Height: 24-36", 24-36" spread.

24129 Raw seed: 250 sds $13.44; 1M sds $43.14

BASIL, ORNAMENTAL — *Annual*

55-70 Days. Basil adds a unique look along with a delicious aroma when incorporated into mixed bouquets; it's a 'no brainer' to include these two fabulous varieties in your offering! Harvest when in bloom. *Basil does not like low temperatures, so we recommend keeping it out of coolers below 50°F.*

Aromatto

A favorite for foliage and blooms, the leaves are dappled in purple to green with purple blooms. Height: 24-30", 12-14" spread.

24221 Raw seed: 250 sds $11.55; 1M sds $42.68

Cardinal Organic ●

Unique large maroon flower heads contrast with dark green leaves. Height: 18-24", 12-14" spread.

20967 Organic seed: 50 sds $2.51; 250 sds $6.13; 1M sds $15.45; 5M sds $69.95

BEGONIA — *Annual*

105-115 Days. While most begonias are known for their flowers, there are many that are in demand more for their fantastic foliage. Sell this type of begonia in either single or mixed containers for best effect.

Gryphon F1

Strong durable plants with large majestic leaves make this unique foliage begonia really stand out in containers and landscapes. Low water needs offer growers the opportunity to sell Gryphon throughout the country. Height: 14-16'', 16-18" spread.

21927 Multi-Pelleted seed: 50 sds $29.63; 100 sds $44.10

MONARDA LAMBADA

CRASPEDIA — *Annual*

110-120 Days. Delicate looking blooms grow from these tough plants; tolerating dry conditions, heat, and poor soil. Also known as drumstick flower.

QIS Billy Buttons ●

Add a touch of whimsy with these adorable sunny orbs. One-inch spheres on slender, but sturdy stems are held high above attractive silver grass-like foliage. Long-lasting as a fresh cut flower, Craspedia also dries beautifully for everlasting arrangements.Height 24-28", 10-14" spread.

21772 Raw seed: 50 sds $2.95; 250 sds $7.95; 1M sds $24.00

DUSTY MILLER — *Annual*

85-90 Days. On trend right now for bridal bouquets! A great dusty silver foliage to offer in your cut flower line.

Cirrus

Large rounded silver leaves. Height: 6-8", 12-18" spread.

02244 Pelleted seed: 500 sds $22.07; 1M sds $40.98.

Silverdust

Silvery-white lacy foliage. Height: 10-12", 10-12" spread.

02416 Raw seed: 50 sds $2.05; 500 sds $4.05; 1M sds $7.32; 5M sds $23.30

EUCALYPTUS — *Annual*

120-150 Days. An australian native that is big in the floral trade. A great foliage to grow as an annual, but easily overwinters in hightunnels in zone 6 or warmer, giving taller branches after the first season. We have selected a mix of common and unique types to help farmers stand out from the wholesale trade.

Baby Blue

WIth short internodes this eucalyptus has small silvery-grey round leaves that are great in bouquets.

65940 Raw seed: 100 sds $17.83; 500 sds $60.98

Lemon Bush

A medium green colorthat has red tips in late summer and fall. This eucalyptus haslarge 2-7" sword shapes leaves that stand out in bouquets with astrong lemon scent.

54800 Raw seed: 100 sds $21.14; 500 sds $95.10

Silver Dollar

Larger leaved than the baby blue, these round silvery-great leaves are a standard in the trade. Cinerea type.

24142 Raw seed: 50 sds $7.59; 250 sds $28.31; 1M sds $99.16

Silver Drop

Fragrant silver-green foliage that is excellent for fresh or dried wreaths and filler in bouquets. Gunnii type. Height: 30-36", 24-32" spread.

53052 Raw seed: 100 sds $18.65; 500 sds $52.75; 1M sds $87.95

MONARDA (BEE BALM) — *Perennial*

110-120 Days. Prized for ability to attract pollinators with vibrant, colorful blooms and equally popular among gardeners because of its delightful fragrance and ease of care.

Monarda Lambada ● — ***Annual in Zones 7 and lower***

Aromatic foliage can be used as a well branched filler alone or when the characteristic bee balm blooms whorl in layers along the stems. Flowers turn from green to pale purple and are irresistible to pollinators! Height 24-36", 10-16" spread.

24352 Raw seed: 250 sds $3.95; 1M sds $14.00

All-America Selections Winner ● Grower Favorite ● 2027 Introduction

HIBISCUS — *Annual*

110-120 Days. Not your grandma's hibiscus, this one is for the foliage! Flower farmers love this addition to their line because the maple-shaped leaves give a regal appearance to arrangements and bouquets.

Mahogany Splendor
Foliage has green/maroon tones in shaded production but will mature to burgundy in full sun outdoors. Height: 36-60", 24-30" spread.
22213 Raw seed: 25 sds $8.41; 100 sds $26.73; 500 sds $120.35

MILLET, ORNAMENTAL — *Annual*

85-90 Days. An array of foliage colors and foxtail-type panicles make these a great addition for flower farmers looking for stunning accents. With or without the plumes the foliage is usable in designs.

Copper Prince F1
Light caramel to bronze/copper foliage is accented with rose-bronze foxtail-type panicles. Height: 24-36", 18-24" spread.
24202 Raw seed: 100 sds $27.16; 500 sds $120.40; 1M sds $225.50

Jade Princess F1
Chartreuse foliage is accented with brown pollenless panicles. Height: 24-30", 18-24" spread.
53985 Raw seed: 100 sds $28.89; 500 sds $130.20; 1M sds $242.50

Jester F1
Starting off with foliage in a chartreuse shade with a subtle burgundy overlays leading to full burgundy color as the season extends. Height: 36-48", 10-14" spread.
20379 Raw seed: 100 sds $29.12; 500 sds $131.15; 1M sds $244.20

Purple Majesty
The darkest purple of foliage(infull sun) of the millets, gives that stunning brown panicles. Height:49-60", 8-12" spread.
03448 Raw seed: 25 sds $15.86; 100 sds $32.09; 500 sds $143.70; 1M sds $212.32

NIGELLA — *Annual*

65-85 Days. Uniquely beautiful blooms are a favorite for accents in bouquets. Seed pods are a secondary accent later in the season. Direct sow for easy growing.

Miss Jekyll Mix Organic
Shades of pink, purple and white. Height 16-24", 9-12" spread.
23468 Organic seed: 25 sds $3.10; 50 sds $4.71; 250 sds $10.45; 1M sds $29.13; 5M sds $104.95

Transformer Organic
Unique yellow bloom with fluted seed pods. Height 18-24", 9-12" spread.
23470 Organic seed: 50 sds $3.02; 250 sds $13.92; 1M sds $45.52; 5M sds $192.40

Delft Blue Organic
Distinctive white with blue/purple streaks. Height: 18-24", 9-12" spread.
23469 Orangic seed: 50 sds $3.90; 250 sds $8.58; 1M sds $25.38; 5M sds $115.50

PANICUM — *Annual*

90-110 Days. An easy-to-grow grass that adds a delicate texture to fresh or dried bouquets.

Frosted Explosion
Stiff green plumes are harvestable at many stages. Can be used for boutonnieres or as large stems for fillers. Height: 24-30", 9-12" spread.
21004 Multi-Pelleted seed: 100 sds $22.36; 500 sds $98.95

PENNISETUM — *Perennial*

98-112 Days. Pennisetum make a great addition to rock gardens and landscapes, as well as an excellent cut and dried flower.

Fluffy
Hello soft, fluffy texture! Fluffy has fresh green leaves with greenish-white spikes and is excellent in group plantings. Height: 20-24", 12-16" spread.
24071 Raw seed: 100 sds $10.24; 500 sds $46.30; 1M sds $84.50

PEPPER, ORNAMENTAL — *Annual*

140-180 Days. A unique addition to cut flower offerings! Adds a nice texture and detail to arrangements. A must grow for fall roadside sales. Hang stems of peppers to dry for an added sales season.

Black Pearl
Green to a glossy black foliage provides great contrast to the rounded shiny black fruit that matures to dark red. Height: 14-18", 12-16" spread.
20322 Raw seed: 100 sds $28.10; 500 sds $124.45

Pumpkin on a Stick Organic (Eggplant)
The plant looks like a typical eggplant (thorns and all) and each stem produces 6-8 pumpkin-like fruits. Sell by the stem or individually, fresh or dried. The unique fruits ripen from green to red to burnt orange making a great fall ornamental. Height: 34-48", 16-20" spread.
23273 Organic seed: 50 sds $5.26; 250 sds $8.74; 1M sds $30.05

Shipping Outside Continental U.S.

We are unable to ship outside the U.S. or its territories. We do not permit our products to be shipped, forwarded, exported, or otherwise transferred outside the U.S. or its territories. The use of third-party freight forwarders or package forwarding services is prohibited. Additional charges may apply when shipping to AK, HI, PR, or U.S. holdings outside of the contiguous USA. Also please note that Credit/Debit cards, Checks and Money Orders must be from a U.S. based financial institution.

Ship Complete Program

We invite you to take advantage of our **Ship Complete** program. To ensure a smooth shipping experience, we will consolidate your order into fewer shipments when there are items on back order. You will choose a date in the future when you absolutely need your products to arrive, we will hold your order until that date, and then ship all the available items at that time. If there are any remaining items that are not ready to ship, we will ship those once they become available.

Surcharge

Please be advised that our S&H rates are subject to change and that a surcharge may be applied for a select number of products that require additional postage, including large and heavy supplies, special orders, and live plant products shipping directly from our partner growers. Orders shipping to **PR** will incur a $10 fee for phytosanitary certificates (per order). Orders shipping to **PR, HI, and AK** are encouraged to take advantage of our ship complete process to ensure all items ordered will ship. Backorders will be canceled.

P.O. Boxes & Street Addresses

Customers with P.O. Boxes must include a complete street address to ensure prompt delivery.

Looking to place a $500+ order?

Be sure to call your sales rep for discounts that may apply!

TAKE ADVANTAGE OF OUR CREDIT TERMS!

Based on eligibility; see page 94 for details.

- Easier ordering process. Simply submit your order and we do the work for you.
- No delays in releasing your order.
- No refunding or re-charging for order changes means funds do not get tied up.

Looking to pay your bill?

Credit card payments: Call 800.544.7938 and select option 3 to connect directly to a Harris Seeds representative.

*Sales tax is charged on all orders shipping to a state where we have Sales Tax Nexus. This includes all states with the exception of DE, MT, NH, NM, and OR (for the most up to date list, please visit our website).

NOTICE OF WAIVER AND INDEMNIFICATION REGARDING SEED BORNE DISEASE

The following seed companies shall be indemnified by this agreement:

A.P. Whaley, LLC
Ball Horticultural Company
Condor Seed Production, Inc.
Enza Zaden
Harris Seeds, Garden Trends, Inc.
Hazera Seeds
HM.CLAUSE
Hollar Seeds
Sakata Seed America, Inc.
Seminis
Syngenta
U.S. Seedless, Inc.

Definitions:

Bacterial Fruit Blotch – Bacterial Fruit Blotch (BFB), or *Acidovorax avenae* subsp. *citrulli,* is a serious disease which continues to be a serious risk in many areas of watermelon cultivation.

Gummy Stem Blight – Gummy Stem Blight (GSB) or, *Didymella bryoniae*, a fungus, is a serious disease which continues to be a serious risk in many areas of watermelon cultivation.

Cucumber Green Mottle Mosaic Virus – Cucumber Green Mottle Mosaic Virus (CGMMV) is a serious disease which continues to be a serious risk in many areas of watermelon production.

Anthracnose – Anthracnose, or *Colletotrichum lagenarium,* a fungus, is a serious disease which continues to be a serious risk in many areas of watermelon production.

Notice:
Watermelon Seed may carry the pathogens which cause BFB, GSB, CGMMV and Anthracnose or other diseases. While it is impossible to conduct all testing procedures to give results with 100% certainty with regard to the presence of any seed borne BFB, GSB, CGMMV and Anthracnose infection, industry accepted representative samples of watermelon seed lots (from the companies named above) may be routinely tested for these pathogens.

Although it is the expressed desire of the above named seed companies to supply disease free seeds, it cannot be guaranteed 100%.

Further, the above named seed companies warrant that the watermelon seeds originating from their respective companies have been labeled as required under State and Federal Law, and that all seeds conform to the label description. The above named companies make no other warranties, express or implied, including any warranty of merchantability or fitness for a particular purpose with respect to the sale of their seeds.

Watermelon seeds are sold as is and with all faults. Purchaser assumes all risks as to quality and performance of watermelon seeds, including the risk that such seeds may carry BFB, GSB, CGMMV and Anthracnose or other diseases.

Purchaser, grower, user and/or transplant producer hereby assumes all risk regarding such seeds, and expressly waives any damage claims with respect to BFB, GSB, CGMMV and Anthracnose or other diseases on watermelon seeds.

The undersigned jointly and severally agree to defend, indemnify and hold harmless the above named seed companies, their employees, agents, and dealers from and against any and all claims, demands, suits, liability, damages and expenses, including, but not limited to, attorneys' fees and court costs, which any of the above named seed companies may suffer or may be subject to, or arising in any way from the distribution by any of the undersigned of the subject seed and relating in any way to **BFB, GSB, CGMMV and Anthracnose or other diseases** of watermelon.

I HAVE READ THE ABOVE NOTICE, UNDERSTAND IT, AND AGREE TO BE BOUND BY ALL OF ITS TERMS. I ALSO ACKNOWLEDGE THAT I HAVE HAD THE OPPORTUNITY TO CONSULT WITH AN ATTORNEY REGARDING THIS NOTICE. I UNDERSTAND THIS NOTICE IS PART OF MY CONTRACT AND A CONDITION OF SALE WHICH APPLIES TO ALL SALES OF SEEDS NOW AND IN THE FUTURE.

P.O. Boxes & Street Addresses

Customers with P.O. Boxes must include a complete street address to ensure prompt delivery.

Deliveries

Please meet your driver when possible and bring in your box(es) from the elements ASAP. Do not refuse shipment for any reason, you will still be financially responsible for the items. Any issues with shipping must be reported within 24 hrs. Please be available on your delivery date.

Shipping & Handling:

PLUGS, BULBS, BARE-ROOTS, AND TUBERS

**Subject to vendor's terms and conditions.*

P.O. Boxes: Vendors cannot ship live plants to PO Boxes. Please provide a physical address and phone number at order placement.

Freight: Plugs, live bulbs, roots are shipped by the supplier. P&L freight is calculated at the time of order.

Sales Policies

Sales tax is charged on all orders shipping to a state where we have Sales Tax Nexus. As of 7/1/2026 this includes all states with the exception of DE, MT, NH, NM, and OR (for the most up to date list, please visit our website). Sales tax will be charged on all purchases within those states unless we have your resale or tax exempt certificate on file. If you are tax exempt, please include your resale or tax exempt certificate with your initial order. See Deliveries section under shipping and handling: seeds.

Return & Refund Policy

All seed sales are final. We will no longer accept returns or exchanges unless product is damaged in transit or if the incorrect item was shipped. Growing supplies can be returned within 90 days of purchase. Item must be in saleable condition. A restocking fee may apply. Approved returns must be accompanied by a Return Authorization number (RMA), which can be obtained by calling us at 800.544.7938.

Plug/Liner & Live Goods orders are non-returnable.

Plug/Liner Claims and **Live Goods Claims** must be made within 24 hours of receiving shipment. For all product cancellation requests, please call 800.544.7938 to discuss your options as conditions do apply.

Prorate Policy

All seeds and plants listed for sale in this catalog are subject to delivery by our growers and suppliers. In the event that a variety is not delivered in full, we may choose to prorate the amount sold to each customer.

Catalog Pricing

Prices in this catalog are effective through June 30, 2027 and are subject to change without notice.

Harris Seeds and Customer Responsibilities

Variety Selection & Cultural Practices

The varietal descriptions and cultural information in this catalog are based on the observations and experience of our employees, associates, and suppliers. We strive to present the varietal and cultural information you need to choose appropriate varieties and raise them successfully.

Customer results may differ from our printed information as growing conditions vary considerably depending upon geographic location, soil type, climatic conditions, pest or disease pressures, and cultural practices. We recommend that you consult your state's agricultural extension service for varietal suggestions and cultural information specific to your local area. **Although we do our utmost to provide accurate, helpful information and advice, you alone are ultimately responsible for the success or failure of your crops.**

Plant Diseases

Many flower and vegetable species are susceptible to serious seed- and soil-borne diseases. Our seed is carefully grown, treated, and/or tested to prevent seed-borne infection. Despite our best efforts, we are unable to guarantee absolute freedom from seed-borne disease, nor soil-borne organisms from attacking plants during growth. We try to offer superior varieties with resistance and/or intermediate resistance to diseases whenever such varieties are available and adapted to your conditions. We urge you to look for these features as you plan your seed purchases.

Terms and Conditions

IMPORTANT NOTICE TO BUYERS:

Harris hereby states, as its sole and express warranty, that the seeds and products it sells will conform to only those label descriptions that are required by State and Federal Seed Law or other applicable laws. THE HARRIS SEEDS COMPANY AND GARDEN TRENDS, INC. DISCLAIM AND MAKE NO OTHER WARRANTIES, EXPRESS OR IMPLIED, NOR ANY WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE, OR OTHERWISE, TO THE EXTENT PERMITTED BY STATE AND FEDERAL SEED LAW AND OTHER APPLICABLE LAWS, ALL SEEDS AND PRODUCTS ARE SOLD AS IS (TEL QUEL).

For dealers reselling Harris seeds, it is their responsibility to inform their customers of Harris Seeds's conditions of sale and limited warranty. Harris further disclaims any liability for any und all alleged seed-borne or product-borne disease losses, whether the alleged infection is seed borne. product-borne, or secondary-caused. Harris makes no representation regarding the seeds or products it sells as free from seed-borne or product-borne disease.

IN NO EVENT SHALL HARRIS OR ANY OF ITS REPRESENTATIVES BE LIABLE FOR CONSEQUENTIAL, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, PUNITIVE, OR ENHANCED DAMAGES, LOST PROFITS OR REVENUES OR DIMINUTION IN VALUE, ARISING OUT OF OR RELATING TO THIS AGREEMENT, REGARDLESS OF (A) WHETHER SUCH DAMAGES WERE FORESEEABLE, (B) WHETHER HARRIS WAS ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, AND (C) THE LEGAL OR EQUITABLE THEORY (CONTRACT, TORT, OR OTHERWISE) UPON WHICH THE CLAIM IS BASED.

HARRIS'S AGGREGATE LIABILITY ARISING OUT OF OR RELATED TO THIS AGREEMENT, WHETHER ARISING OUT OF OR RELATED TO BREACH OF CONTRACT, TORT (INCLUDING NEGLIGENCE) OR OTHERWISE, SHALL NOT EXCEED THE TOTAL OF THE AMOUNTS PAID TO HARRIS FOR THE PRODUCTS.

All orders are accepted subject to availability.

These disclaimers of warranties and limitations of liability of Harris may not he altered or amended except by an instrument, in writing signed by an authorized representative of Harris as designated by the President and CEO.

By acceptance of the seeds or products, the buyer acknowledges the disclaimers and limitations herein described are conditions of sale and that they constitute the entire agreement between the parties regarding warranty or any other liability. Any claim resulting from the use of seeds or products must be presented to the Harris within 30 days after any defect or other basis of such claim was discovered or should have been discovered during the growing season in which the seed or product was purchased. Harris will not assume any responsibility after the above-mentioned thirty 30-day period. If the buyer's inspection and testing reveals, to Harris's satisfaction, that the products sold do not conform with the limited warranty set forth herein, Harris shall in its sole discretion, and at its expense (subject to the buyer's compliance with the notice procedures set forth above), either (1) replace such products, or (2) credit or refund the price of such products less any applicable discounts, rebates, or credits. If Harris exercises its option to or replace, Harris shall, after receiving the buyer's shipment of such products, ship to buyer, at buyer's expense, the replacement products to buyer. Buyer has no right to return for repair, replacement, credit, or refund any products except as set forth herein or as otherwise required under applicable law.

Some states do not allow the exclusion or limitation of the incidental or consequential damages, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights, and you may also have other rights that vary from state to state.

IT IS EXPRESSLY UNDERSTOOD THAT ANY TECHNICAL ADVICE BY HARRIS SEEDS COMPANY AND GARDEN TRENDS. INC. IN REFERENCE TO THE USE OF ITS PRODUCTS IS GIVEN GRATIS. FURTHERMORE. HARRIS SEEDS COMPANY AND GARDEN TRENDS, INC. DO NOT ASSUME ANY RESPONSIBILITY FOR THE ADVICE GIVEN OR THE RESULTS OBTAINED.

No waiver by Harris of any of the provisions of this Agreement is effective unless explicitly set forth in writing and signed by Harris. No failure to exercise, or delay in exercising, any right, remedy, power, or privilege arising from this Agreement by Harris operates or may be construed, as a waiver thereof. No single or partial exercise of any right, remedy, power, or privilege hereunder by Harris precludes any other or further exercise thereof or the exercise of any other right, remedy, power, or privilege by Harris.

Scan or visit harrisseeds.info/terms-of-service for additional state-specific notices.

GROWING SUPPLIES

HAND SEEDERS

Gro Mor Vacuum Seeder

Operated with an easy squeeze of the bulb, this hand seeder will save you plenty of time when seeding your flowers and vegetables. Tips are angled for ease of seed pick-up and placement. Seeder features tip storage and seed tray, 5 different tip sizes, and a magnifier attachment for sowing very small seed.

40343 Vacuum Seeder $28.95

Dial Seeder

Our dial seeder is a customer favorite! Simply fill the seed reservoir and select from six different seed sizes on the rotary dial. Gently tap the side of the seeder to get seeds to flow down the tip to your seed starting flat.

41060 Dial Seeder $4.95

Vibro Hand Seeder

With a push of a button, this seeder's electronic motor slowly vibrates seed down into your seed flats. Features a speed control knob to easily adjust the vibration rate of the seed. Runs on one 9 volt battery. Quickly change your Vibro Hand Seeder from battery power to 115-volt electric with our converter kit. Manufacturer 60 day warranty.

40342 Vibro Hand Seeder $86.95
40579 Power Converter $36.95

SEED STARTING & SOIL MIXES

Organic Mechanics Seed Starter Mix

Formulated for optimal seed germination and provides 4+ weeks of fertilization power. Mix holds moisture, yet drains well for healthy root growth. Start your vegetables, herbs, annuals, and perennials seeds in seedling flats, small fiber pots, or any container for planting seeds. Mix contains coconut coir, pine bark, rice hulls, worm castings, and an OMRI-listed organic fertilizer.

41149 Seed Starter Mix 16qt. $23.75

Jiffy Seed Starting Mix

Jiffy Mix is an optimum blend of Canadian sphagnum peat and ver miculite that can be used for seed starting, cutting propagation, and transplanting. The blend's pH is 5.5 to 6.2. Each 2.8 cu. ft. bag fills approximately 15 x 1020 flats.

04035 Jiffy Mix $40.95

Professional Formula Seed Starter Mix

This high quality lightweight mixture of sphagnum moss and horticultural vermiculite is used by many commercial bedding plant producers. This mix is especially easy to moisten, drains well, and holds proper moisture.

04028 Seed Starter Mix 20 qt. $18.95

FIELD SEEDERS

7 PLANTER PLATES INCLUDED

Earthway Precision Garden Seeder

Quickly sow rows of seed, great for small acreage

Simply push the Earthway Seeder through your prepared soil after filling the hopper and it will automatically dig a furrow to a selected depth, plant your seed, cover the furrow, and mark the next row. Includes 7 different planter plates for beans, beets, carrots, corn, peas, hemp, and radishes. An optional planter plate set is available below. The optional newly designed fertilizer attachment easily attaches to your seeder. New design side dresses both sides of the row and flow rates are easily adjusted by the adjustment handle.

05421 Earthway Seeder $167.99
05424 Fertilizer Attachment $94.95
41861 Seeder & Optimal Plate Combo $179.95
Save $22.95!

Earthway Standard Planter Plate Kit

Contains the 7 planter plates that are included with the seeder. Buy an extra set for convenience.

05423 Standard Planter Plate Kit $44.95

Earthway Optional Planter Plate Kit (6 plates) For Earthway Seeder

Plate #1: broccoli, cabbage, cauliflower, turnips, rutabaga, mustard (1" spacing); Plate #2: rutabaga, lettuce (light), kale, cabbage (light), mustard, carrots (light), turnips (light); Plate #3: cucumbers; Plate #4: popcorn; Plate #5: lima beans; Plate #6: blank.

05422 Planter Plate Kit $42.95

Earthway Blank Planter Plate

These plates allow you to make a custom seed plate with spacing and seed size that you determine. Use a small file or grinder to carve the cups into the plastic plate, or in some cases use epoxy to create a cup for larger seeds.

41105 Earthway Blank Planter Plate $11.95

Additional freight cost · Grower Favorite · 2027 Introduction

LARGE SEEDS

Jang TD-1 Seeder

The Jang TD-1 Seeder is great for singulating larger seeds like corn, beans, squash, and pumpkins. Seed plates (sold separately) rotate and singulate your seeds precisely, allowing you to save seed and time. The unit comes with a 7.3 quart (7 liter) clear hopper which allows you to see how much seed is remaining. Seeding depth is adjusted quickly with a single screw adjustment. Spacing is adjustable from 2-42"using 6 different sprocket arrangements that are included with the seeder. **Seed plates sold separately.**

41569 Jang TD-1 Seeder $810.00

Jang TD-1 Seed Plates

Seed plates are made from anti-abrasion plastic to prevent build-up of static electricity that causes seeds to stick together. Seed plate holes allow for individual seeds to pass through for accurate seed drop and spacing.

41570 Jang TD-1 Bean Seed Plate

Plate has 8 round 9/16" (14mm) diam. holes. Plate spacing can be adjusted from 4-10" apart depending on sprocket settings.

41571 Jang TD-1 Pea Seed Plate

Plate has 16 round 3/16" (9.5mm) diam. holes. Plate spacing can be adjusted from 2-5" apart depending on sprocket settings.

41572 Jang TD-1 Corn Seed Plate

Plate has 8 round 5/16" (8mm) diam. holes. Plate spacing can be adjusted from 4-10" apart depending on sprocket settings.

41573 Jang TD-1 Pumpkin Seed Plate

Plate has 1 pre-drilled pilot hole. Hole must be drilled out to match your seed size. Plate spacing can be adjusted from 32-84" apart depending on sprocket settings.

41574 Jang TD-1 Blank Seed Plate

Plate allows you to create your own seed plates to fit your needs. Seed size and spacing can be adjusted by drilling out the proper hole size and adjusting the sprocket settings.

All TD-1 Seeder Plates $47.00 ea.

SMALL SEEDS

Jang JP-1 Seeder

The Jang JP-1 Seeder singulates and spaces small to medium size seeds accurately, saving seeds, time, and labor. The quick change seed rollers (sold separately) are available for many sizes of seeds and seed spacing. Spacing is adjustable using 6 different sprockets that are included with the seeder. The unit comes with a 1 qt. clear hopper which allows you to see how much seed is remaining. Seeding depth is adjusted with a single screw adjustment. Optional fertilizer hopper and row marker attachment are also available.

Seed rollers sold separately, see chart below.

41557 Jang JP-1 Seeder $524.00

Jang JP-1 Seed Rollers

Seeder rollers have slots/holes that cup the seeds to allow for singulation. Made from anti-abrasion plastic to prevent build-up of static electricity that causes seeds to stick together. Please see chart below for roller specifications. **Some rollers ship directly from supplier.**

Jang JP-1 Seed Rollers $24.50 ea.
Rollers Noted * $29.50 ea.
Rollers Noted ** $35.50 ea.

Jang JP-2

Jang JP-3

Jang JP-2 and JP-3 Seeder

Singulate the same small to medium seeds as the JP-1 but two or three rows at a time. Adjustablerow spacing and 3 point hitch compatible.

Seed rollers sold separately, see chart below.

41863 Jang JP-2 seeder $964.00
41994 Jang JP-3 seeder $1194.00

Jang JP-1 Fertilizer Attachment

The Fertilizer Attachment allows you to fertilize while you seed. Attaches to seeder to deliver granulated fertilizer and holds 1 qt. of fertilizer. **Attachment ships directly from supplier.**

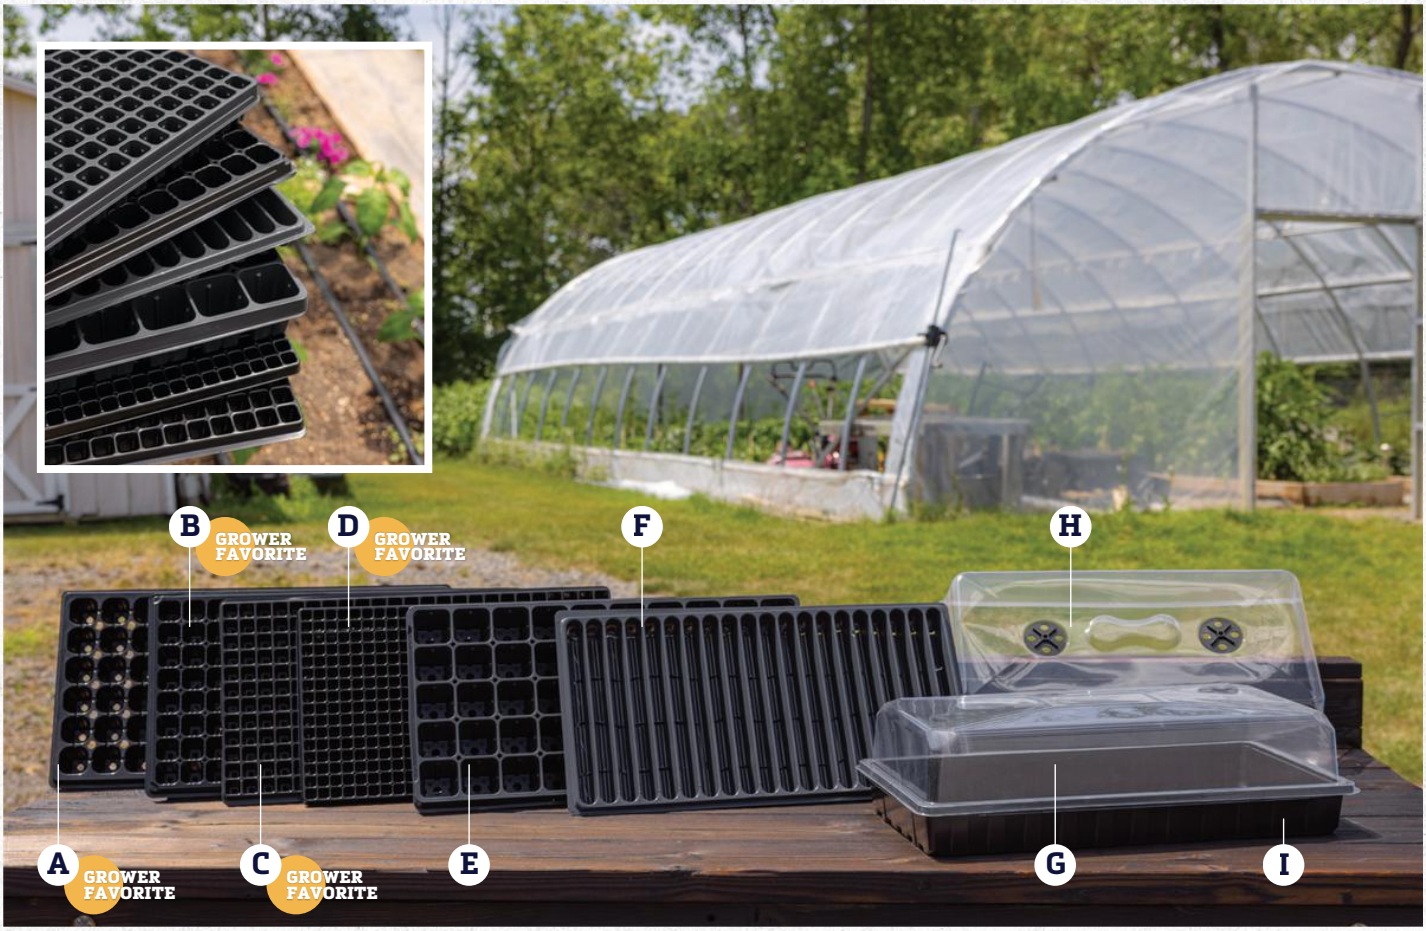

41558 JP-1 Fertilizer Attachment $210.00

Jang JP-1 Seed Rollers

Call or visit ***harrisseeds.com*** for a full listing.

PLUG TRAYS

Plug Trays

Great for individualizing single plants. These heavy duty, semi-rigid black plug trays allow you to easily separate species in one tray, reducing potential disease spread and for easy transplanting. Trays easily fit into our 1020 no-drainage trays and Permanest trays (lip of plug trays may rest on top of other trays so that cells are in the trays, but depending on cell size, the bottom of the cells may not touch bottom of tray. Width of cells measured from top of cell as cells taper.)

Tray measurements:
72 cell – 11"W x 21¼"L
128 cell – 11"W x 21¼"L
288 cell – 10½"W x 20½"L
512 cell – 10½"W x 20½"L

Cell measurements:
72 cell – 1½"W x 1⅞"D
128 cell – $^{11}/_{16}$"W x 2"D
288 cell – ¾"W x 1"D
512 cell – $^{9}/_{16}$"W x $^{15}/_{16}$"D

A. Plug Trays 72 Cell
41948 5 Count $19.95
41948 50 Count $84.95

B. Plug Trays 128 Cell
41949 5 Count $19.95
41949 50 Count $84.95

C. Plug Trays 288 Cell
41950 5 Count $19.95
41950 50 Count $84.95

D. Plug Trays 512 Cell
41951 5 Count $19.95
41951 50 Count $84.95

E. 50 Cell Plug Tray
With its large 1⅞"W x 2½"D cells, this plug tray is for growers who wish to produce larger trans plants. Great for vegetable or cut flower transplants, the cells are large enough so transplants do not get root bound. Trays are sturdy and a grower should get several seasons of use with proper care. Tray measures 11½"W x 22½"L.
40783 Tray 50 Cell 5ct. $22.95
40783 Tray 50 Cell 50ct. $174.95
40783 Tray 50 Cell 100ct. $354.95

F. 20 Row Germination Tray
A great way to sow different seed varieties in a small space! These 20-row, heavy duty semi-rigid black germination trays allow you to easily sow and label up to 20 varieties in one tray. Separate rows also reduce potential disease spread and for easy transplanting. Simply lift out each row of seedlings as they reach transplanting size. Measuring 11"W x 21¾"L x 1½"D, the trays are sturdy enough to wash and re-use.
04108 20 Row 5ct. $34.95
04108 20 Row 50ct. $245.95

Clear Propagation Dome for 1020 Flat
Designed to fit standard trays, these domes create an ideal microclimate for rapid germination and healthy growth. Measures 11"w x 22"L.
G. 42012 3.5" Dome 6ct. $24.95
42012 3.5" Dome 50ct. $149.95
H. 42013 4" vented dome 6ct. $34.95
42013 4" vented dome 20ct. $103.95

1020 No Drainage Plastic Carrier Tray
Compatible with various growing mediums, these trays give you the flexibility to nurture a wide array of plants. Measures 11"W x 20¾"L X 2"D.
I. 42011 No Drainage Tray 6ct. $19.95
42011 No Drainage Tray 50ct. $79.95

GRAFTING SUPPLIES

Grafting your favorite varieties onto disease tolerant rootstock gives you the flavor you love while achieving improved disease protection and hardiness. Grafting has been shown to improve crop health, yield, and disease resistance.

Grafting Clips

These flexible, silicon grafting clips are available in three diameter sizes and styles. Standard clips are placed over the graft, holding the joined stems in place. As the plant grows, the clip simply falls off. Slotted clips have an extra hole through the clip so a support stake can be added to help hold up the plant. Clips are approximately ½" long.

40861 Standard 1½ mm 100 ct. Bag $12.75; 2-4 @ $11.75 ea.; 5 @ $10.75 ea.

40862 Standard 2 mm 100 ct. Bag $12.95; 2-4 @ $11.95 ea.; 5 @ $10.95 ea.

42064 Standard 2.5 mm 100 ct. Bag $14.75; 2-4 @ $13.75 ea.; 5 @ $12.75 ea.

41847 Slotted 1½ mm 100 ct. Bag $14.25; 2-4 @ $13.25 ea.; 5 @ $12.50 ea.

41848 Slotted 2 mm 100 ct. Bag $13.75; 2-4 @ $12.75 ea.; 5 @ $12.25 ea.

42065 Slotted 2.5 mm 100 ct. Bag $14.75; 2-4 @ $13.95 ea.; 5 @ $12.95 ea.

Spring Loaded Grafting Clips

Spring loaded clips are great for larger stems ⅛" to ¼" in diameter and for grafting items like watermelon and cucumbers. Each bag contains 100 clips.

40863 Spring Clips $15.75; 2-4 @ $14.75 ea.; 5 @ $13.75 ea.

PLANT LABELS & MARKERS

Plastic Plant Labels

These rugged, weather proof plain white ⅝"W plastic labels are of excellent quality. Mark on them with pencil, rubber stamps or the pen shown below. 250 labels per package.

04524 4" Plastic Labels $17.50; 4 @ $16.50 ea.

04525 5" Plastic Labels $18.50; 4 @ $17.50 ea.

04526 6" Plastic Labels $20.50; 4 @ $19.50 ea.

04528 8" Plastic Labels $21.50; 4 @ $20.50 ea.

Wooden Plant Labels

High quality, smooth wooden labels for use indoors or outside. Mark variety names in seeding tray or individual pots.

04541 Stakes 4" 50 ct. $9.95

04541 Stakes 4" 1000 ct. $46.95

04542 Stakes 5" 50 ct. $12.95

04542 Stakes 5" 1000 ct. $49.95

40762 Stakes 6" 50 ct. $11.95

40762 Stakes 6" 1000 ct. $74.95

40763 Stakes 8" 50 ct. $12.95

40763 Stakes 8" 500 ct. $64.95

12" Wooden Stakes

Best quality untreated wooden stakes, made in Maine. 1⅛"W x 12"H. Write on with our waterproof pen, listed below.

04543 50 ct. $22.95

04543 250 ct. $68.95

Large 18" Field Stakes

Use these high quality, heavy duty field stakes to identify cut flower, vegetable, or other plants.

04547 Field Stakes 1⅛"W x 18"H 100ct. $69.95

Harris' Marking Pens

Highly waterproof and fade-resistant for marking on wood, plastic, and metal labels. Environmentally friendly alcohol-based ink with a large ink capacity for long life. Marker features a 1.2 mm tip and the pen features a .8mm tip.

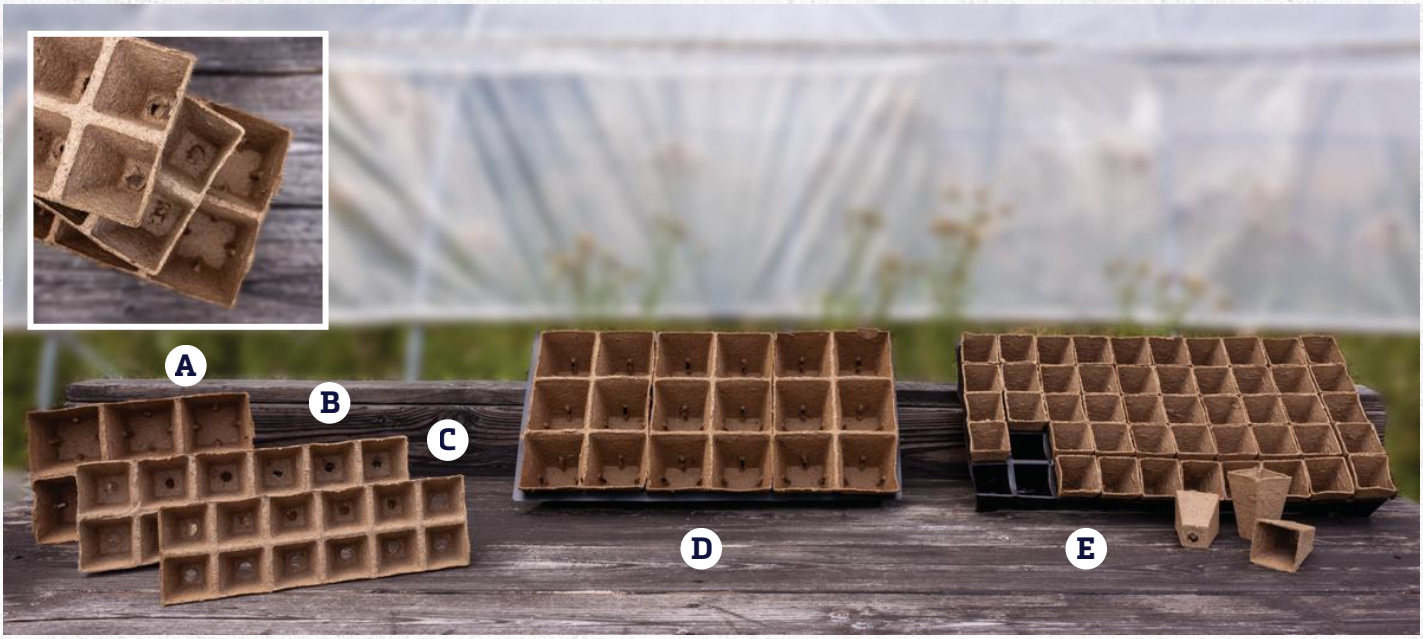

04551 Garden Marker $4.95; 3-9@$4.25 ea.; 10@$3.95 ea.

41136 Fine Tip Marker $3.95; 3-9@$3.50 ea.; 10@$3.25 ea.

JIFFY STRIPS AND POLY-PAKS

Jiffy Strips

Fill these versatile peat strips with your favorite planting medium and experience the convenience of easy seedling/cutting handling. Break the strips apart into square pots for quick field setting with no transplant shock. This time-tested product supports stocky plant growth. 3" pot - 3" diam. x 3"H, 6 pots per strip

2¾" pot - 2¾" diam. x 3⅜"H, 12 pots per strip
1¾" pot - 1¾" diam. x 2"H, 12 pots per strip

A. 04119 3" Strip 100ct. $99.95
04119 3" Strip 210ct. $170.95
B. 04157 2¼" Strip 210ct. $154.95
C. 04155 1¾" Strip 390ct. $168.95

Poly-Paks

Convenient Jiffy Poly-Paks are a real time and labor saver! Individual square pots are pre-loaded into a thin plastic handling sheet, which may be placed into a 1020 carrier tray. Three sizes of Poly-Paks are offered.

D. 04126 Jiffy 3½"W x 4"D Poly-Pak 18 pot sheet; 31 sheets/3ct. $18.95
04126 Jiffy 3½"W x 4"D Poly-Pak 18 pot sheet; 31 sheets/cs. $136.95

E. 04128 Jiffy 2"W x 3"D Poly-Pak 50 pot sheet; 40 sheets/3 ct. $19.95
04128 Jiffy 2"W x 3"D Poly-Pak 50 pot sheet; 40 sheets/6 ct. $43.95
04128 Jiffy 2"W x 3"D Poly-Pak 50 pot sheet; 40 sheets/cs. $152.95

04131 Jiffy 3"W x 3"D Poly-Pak 18 pot sheet; 44 sheets/cs. $156.95

PEAT POTS

Jiffy Round Pots

Jiffy Pots encourage vigorous plant growth, with no transplant shock, as roots are not disturbed when transplanted into the field. The larger 3" and 4" sizes are excellent for quick-growing plants, such as squash and pumpkins.

2¼" pot - 2¼" diam. x 2¼"H
3" Deep pot - 3" diam. x 4½"H
3" pot - 3" diam. x 3"H
4" pot - 4" diam. x 3"H
5" pot - 5" diam. x 5"H

04151 2¼" Pot 100ct. $21.95
04151 2¼" Pot 2816ct. $217.95
04150 3" Deep Pot 100ct. $23.50
04150 3" Deep Pot 1080ct. $168.95
04152 3" Pot 100ct. $30.95
04152 3" Pot 1400ct. $131.95
04153 4" Pot 100ct. $32.95
04153 4" Pot 960ct. $182.95
40505 5" Pot 100ct. $36.95
40505 5" Pot 600ct. $179.95

Jiffy Round Pots

JIFFY PELLETS & PELLET SHEETS

Organic Jiffy-0 Pellets and Pellet Sheets

One of your favorite transplantable growing mediums is now available organically! The new OMRI listed Jiffy Pellets and Pellet Sheets are available for organic and controlled environment growers. You can use these to transplant into hydroponic, aquaponic, and aeroponic systems. The Pellet Sheets lightweight plastic sheets hold the pellets in a grid formation while in use. Since the Jiffy pellets are locked into the sheet, they stay put when water is added. Each insert measures 10"W x 20"L, and perfectly fit into our 1020 trays and 11"W x 22"L trays. Loose bulk pellets are also available in the 36mm and 42mm sizes.

30mm pellets expand to 2"H. 105 pellets per sheet.
36mm pellets expand to 1⅓"H. 72 pellets per sheet.
42mm pellets expand to 1½"H. 50 pellets per sheet.

PROPAGATION SUPPLIES

Jiffy Carefree Pellets

Professional-Quality Seed Starting & Plant Propagation Made Easy

Jiffy Carefree Pellets provide a clean, convenient and consistent growing medium for starting seeds and propagating cuttings. Designed for reliable germination and strong root development, these compressed growing pellets are an excellent choice for commercial greenhouse growers, professional propagators, market growers and home gardeners.

Simply add water and the compressed Jiffy pellets expand into ready-to-use growing plugs. The pellet holds the growing medium together, creating an individual propagation plug that is easy to handle and transplant. Plants can be moved to their next growing stage with minimal root disturbance, helping reduce transplant shock and encourage faster establishment. Jiffy Carefree Pellets are available in 30mm (expands to 2" tall) and 42mm (expands to 2" tall) sizes, making it easy to select the right pellet for your crop and growing application.

42102 Jiffy Carefree 30MM Pellets 50ct $13.95
42102 Jiffy Carefree 30MM Pellets 900ct Case $71.95
42101 Jiffy Carefree 42MM Pellets 50ct $14.95
42101 Jiffy Carefree 42MM Pellets 400ct Case $51.95

Jiffy Carefree Pellet Strips and Sheets

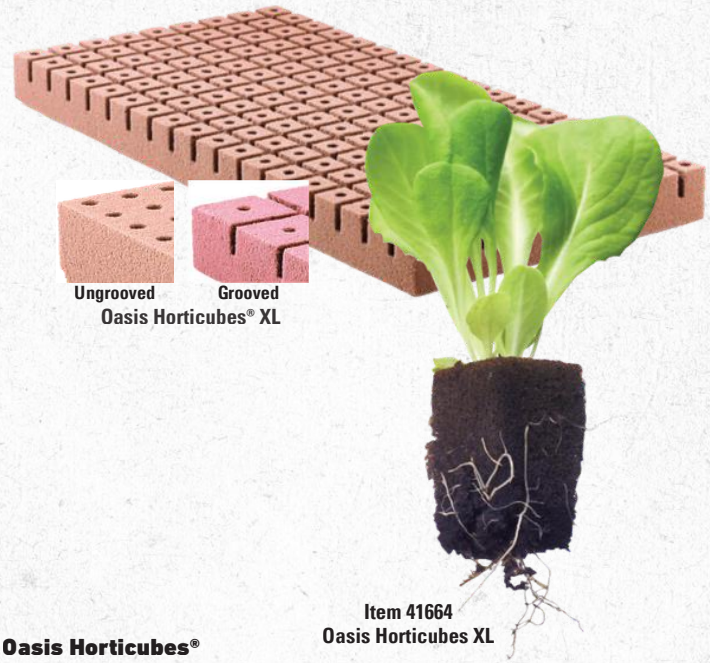

Professional Seed Starting Made Easy

Take the mess and extra work out of seed starting with Jiffy Carefree Sheets. Pre-arranged Jiffy growing pellets provide a clean, convenient and consistent solution for starting vegetables, flowers, herbs and other young plants.

Simply place the sheet into a compatible propagation tray, add water and watch the compressed pellets expand into ready-to-plant growing plugs. The sheet format keeps pellets uniformly positioned and helps reduce the time and labor associated with filling individual cells with loose growing media.

Ideal for commercial greenhouse growers, market growers and home gardeners, Jiffy Carefree Sheets promote healthy root development and make transplanting easy. Individual pellets can be separated and transplanted with the plant, reducing disturbance to developing roots. Jiffy Carefree Pellets are available in 30mm (expands to 2" tall) and 42mm (expands to 2" tall) sizes.

42098 Jiffy Carefree 30MM Strips 3ct (9 Total) $28.95

42100 Jiffy Carefree 42MM Sheets 15ct Case $119.95

Oasis Horticubes® XL

Item 41664
Oasis Horticubes XL

Oasis Horticubes®

Horticubes are specially engineered for hydroponic seed germination of vegetables and herbs. The higher drainage design helps maintain an ideal air/water balance, even under heavy watering conditions, and keeps the top of the media drier, minimizing algae growth. The low density foam medium enables superior root growth. Sheets are pre-dibbled with seed holes for uniformity in depth and spacing.

3 Count Sheets:
41657 Horticubes 50 cube Sheet $39.95
41658 Horticubes 104 cube Sheet $39.95
41660 Horticubes 276 cube Sheet (ungrooved) $39.95

20 Count Sheets:
41657 Horticubes 50 cube Sheet $172.95
41658 Horticubes 104 cube Sheet $172.95
41660 Horticubes 276 cube Sheet (ungrooved) $172.95

Oasis Horticubes® XL

Horticubes XL is specifically developed for professional hydro ponic growers, and offers proven performance with quicker crop turns and time savings, particularly for lettuce and herb crops. It is the first hydroponic medium to dramatically improve root penetration and seedling top growth by 35%. Specialized media density and fine cell structure promote faster, stronger root growth, allowing for more efficient nutrient absorption, and faster, stronger plant growth. Fully developed roots penetrate the bottom of the cube in just seven days. Pre-dibbled sheets provide uniformity in depth and spacing. Available in single seed or wider multi-seeded dibble hole sizes.

3 Count Sheets:
41661 XL 50 cube Sheet $39.95
41662 XL 104 cube Sheet $39.95
41663 XL 104 cube Multi Seed Sheet $39.95
41664 XL 162 cube Sheet $39.95
41665 XL 162 cube Multi Seed Sheet $39.95

20 Count Sheets:
41661 XL 50 cube Sheet $189.95
41662 XL 104 cube Sheet $189.95
41663 XL 104 cube Multi Seed Sheet $189.95
41665 XL 162 cube Multi Seed Sheet $189.95

COIR PRODUCTS

Riococo Open Top Grow Bags

Produced from a super washed blend of coconut fiber raw materials, these bags provide the ideal coco medium characteristics for plant growth. The selected raw materials are five times washed and blended without fine dust particles. This product is specially designed to reach the optimum water holding capacity, air-filled porosity (28-33%), and a pH of 5.5-6.5. Great for tomatoes, peppers, and other hydroponic crops. OMRI approved for organic production.

Grow Bag Expanded Dimensions

1 gal. – 15W x 15H x 15W cm.
2 gal. – 22W x 18H x 18W cm.
5 gal. – 30W x 25H x 25W cm.

41769 Bags 1 Gal. 44 ct.	$147.95
41770 Bags 2 Gal. 18 ct.	$88.50
41772 Bags 5 Gal. 6 ct.	$84.95

Riococo 15 Liter Grow Slabs

Made from a special blend of coir chip and natural materials. The selected raw materials are five times washed and blended without fine dust particles to make grow slabs. Slab has very high air fill porosity (28-33%), moderate water holding capacity (4.5-5.5), and balanced pH (5.5-6.5) with very low EC and Sodium (Na) content. Grow slab has evenly distributed martial mix packed in UV stabilized co-extruded bags. Expanded bags measure 100L x 15W x 12H cm. OMRI approved for organic production.

41773 Grow Slab 5ct. $40.95; 4 @ $39.95ea.

WHY GROW MICRO GREENS?

Starting seeds to harvest while they are still a seedling (or micro green) is an easy and efficient way to consume more nutrients. It's the ultimate power pack of a snack and your customers will love them!

See page 69 for more information.

MICRO GREEN SUPPLIES

Turn your unused greenhouse into a revenue source with micro greens!

Many greenhouses sit dormant 7-8 months out of the year once plant production is complete. Many growers are turning that unused space into a source of revenue during those months with micro greens. This fast growing, low input crop finishes in less than 3-4 weeks and commands a high dollar at grocery stores, restaurants, and farmers markets. Production is easily scalable to your marketplace and does not take a big investment to get started.

Micro Green Trays

These double thick heavy-duty trays are perfect tray for starting, growing, and harvesting micro greens. These shallow germination trays allow you to cut your micro greens closer to the plant base for increased yields and presentation. The shallow trays also offer better air flow around the plants reducing the chances of fungus or disease. These trays are available with or without drainage holes. Trays measure 10"W x 20"L x 1.25"D.

41801 Drainage 5ct.	$32.95
41801 Drainage 50ct.	$192.95
41800 No Drainage5ct.	$32.95
41800 No Drainage50ct.	$192.95

BioStrate® 160 Felt

Great for micro greens, this lightweight, pH balanced, bio- based textile absorbs and retains water while providing an inert environment for dense healthy root development. BioStrate is compostable; however, it will maintain its structural integrity for the life of your crop and won't clog filters. Just moisten BioStrate Felt with mist or quickly dip in a water bath, then let excess water drain. Sprinkle seeds to the desired density, then mist. BioStrate performs best when not overwatered. The felt should be kept moist, not saturated. Available in 9½"W x 19½"L sheets and by the roll.

42014 BioStrate 160 9"x250' Roll	$126.25
42015 BioStrate 160 Sheets 20ct.	$24.95
42015 BioStrate 160 Sheets 600ct.	$660.95

Terrafibre™ Hemp Grow Mats

Using the fibrous byproduct of the industrial hemp plant, Terrafibre grow mats are ideal for micro greens, sprouts, wheat grass, and other short rotation crops. Industrial hemp fibers are separated, cleaned, and needle punched to produce a 100% biodegradable, soil-less growing medium. Hemp fibers have high water retention, keeping seeds wet through germination. Just sprinkle seeds to the desired density, then mist. The 5" squares are great for live clamshell sales of micro greens and the 10"W x 120'L roll allows you to cut to size to fit your needs. Mats are 100% biodegradable and fully compostable.

41827 Terrafibre 10"W x 20"L Mats10ct.	$27.95
41827 Terrafibre 10"W x 20"L Mats140ct.	$147.95
41828 Terrafibre 5"W x 5"L Mats 40ct.	$17.95
41828 Terrafibre 5"W x 5"L Mats 560ct.	$155.95
41829 Terrafibre 10"W x 120'L Roll	$109.95

8 Tray Light Stand

2 Tray Light Stand

KEN-BAR LIGHT STANDS

Our new Ken-Bar light stands are a great way to get your plants started indoors without opening up the greenhouse. These sturdy stands feature steel construction and are easy to assemble. Each stand also comes with 4 wheels (2 locking) for easy movement.

Ken-Bar 8 Tray Light Stand ● $

This 2-tier stand allows you to start up to 8 standard 1020 tray in a small 23" x 46" footprint. Each light fixture measures 18" wide and 43" long and features three 6400K LED grow light strips. Each fixture also has independent on/off switches allowing you to operate the light fixtures separately. Each tier allows for 6 different height settings to adjust light height as your plants grow. Stand measure 59" T x 23" D x 46" W.

70247 Ken-Bar 8 Tray Light Stand $795.95

Ken-Bar 2 Tray Light Stand ●

This smaller light stand is great for starting your transplants in a smaller location. Each light fixture measures 13" wide and 23" long and features two 6400K LED grow light strips. Each fixture also has independent on/off switches allowing you to operate the light fixtures separately. Each tier allows for 4 different height settings to adjust light height as your plants grow. Stand measure 45" T x 12" D x 24" W.

70246 Ken-Bar Two Tray Light Stand $299.95

DIGITAL TIMER

Digital Dual Outlet Timer

Using a timer to automate your lighting adds convenience and encourages productive growth with consistent hours of light. Timers feature 1 minute on/off, up to 8 on/off cycles per day, controls 2 outlets simultaneously and can handle 15 amps/1725 watts.

40627 Digital Dual Outlet Timer $22.95

Digital Dual Outlet Timer

COMING SOON FROM KEN-BAR!

Give seedlings and cuttings the light they need with Ken-Bar's new LED Strip Lights, designed for efficient, reliable plant propagation. Their slim, low-profile design makes them ideal for propagation racks, benches, and other indoor growing setups while providing bright, energy-efficient light where plants need it most. Whether you're starting seeds, rooting cuttings, or growing young plants, these versatile LED lights make it easy to build an effective lighting system for your operation.

Ken-Bar products for the grower

LIGHT REQUIREMENT FOR *germination*

Many vegetables and flowers require light for seed germination. It is important to check your seed packet to see if light is a requirement. If so, these seeds should be sown on top of the soil or very lightly covered to ensure they receive enough light. Another common problem people new to seed starting face is spindly plants that fall over. When seeds are started indoors or outside under very short days, artificial lighting is a must. Lights should be placed very close to each flat, approximately 1½ or 2 inches from the plants. The close proximity of the light ensures that the plants do not stretch toward the light but rather stay healthy and stocky.

AgriTape Heat Mat ** Controller sold separately*

AgriTape 11"W Heat Mats

Kwik Grow Heat Mat

Jumpstart Heat Mats

HEAT MATS

AgriTape Heat Mats
Agritape Heat Mats distribute heat evenly over the entire mat surface, eliminating the cool spots typical of wire coil mats. Agritape Heat Mats should be used with a Thermostat.

Jumpstart Heat Mats
These new heavier duty heat mats will provide uniform heat for hundreds of seedlings or cuttings. Warms root area 10-20°F over ambient temperature to improve germination.

AgriTape 11"W Heat Mats
Our top selling line of heat mats! AgriTape provides uniform heating without the cold spots you get with wire element heat mats. Designed for years of use with proper care. All mats come with ground screens and use 20 watts of power per ft. One year manufacturer's warranty. Controllers sold separately.

4'L Mats and Kits
04469 Two 4' Mats with Medium Controller $239.95
40007 Four 4' Mats with Medium Controller $304.95

Precise Thermostat

Ken-Bar AT Thermostat Controllers

CONTROLLERS

COMPATIBLE WITH AGRITAPE HEAT MATS

Precise Thermostat

This quality thermostat is based off of the thermostat used in Ken-Bar's Precise Heat Mats, giving growers a lower cost option for a quality thermostat without having to step down to a less dependable model. Controller features a heavy duty plastic housing, copper probe, is adjustable from 40-100°F, **handles up to 40 sq. ft of material and has one receptacle.**

70090 Thermostat $109.95

Ken-Bar AT Thermostat Controllers

Heavy duty aluminum-housed controllers allow you to select desired soil temperature from 40-100°F as measured with a copper sensor probe. **The medium controller handles up to 40 sq. feet of material and has two receptacles. The large controller handles up to 100sq. feet of material and has two receptacles.** Built for years of use and comes with a manufacturer's 1 year warranty.

40008 Medium Capacity Controller $187.95
40009 Large Capacity Controller $199.95

COMPATIBLE WITH JUMP START HEAT MATS

Jump Start Digital Thermostat

This economical thermostat helps provide constant optimum temperatures for specific crops. Thermostat features water-resistant stainless steel temperature probe, controllable temperature range of 68-108°F degrees, LED indicator, and 3-prong grounded plug. Compatible with all Hydrofarm heat mats.

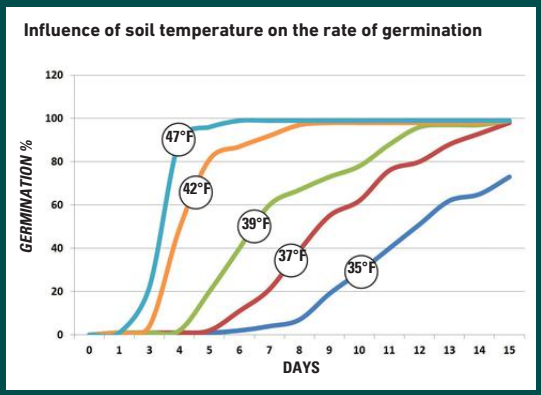

41883 Digital Thermostat $50.95

Jump Start Digital Thermostat

PROPER SOIL TEMPERATURES ARE KEY TO SUCCESSFUL GERMINATION

One of the main reasons many people are unsuccessful starting seed is due to soil temperature. In general, most flower and vegetable seeds like soil temperatures in the 70-75°F range. While some think their seed starting area is warm enough to germinate seed, soil temperature tends to run approximately 5°F lower than air temperature and can be too chilly for germination. To achieve the necessary soil temperatures for proper seed germination, provide additional and controlled bottom heat through heat mats. For most seeds, soil temperatures should be kept at constant temperature and vary little over the germination period. Drops in soil temperature during nighttime hours can cause lower germination rates and a prolonged germination period.

OMRI Listed for Organic Production Ken-Bar Item

PLASTIC MULCHES

MOST CROPS

Black Plastic Mulch Rolls

These black plastic mulches represent an economical and convenient way to suppress weeds and reduce water loss in the field. The increased soil temperature provided by the mulch has been shown in trials to increase vegetable yields. Mulch is 1.0 mil., embossed.

40363 Black 4'W x 600'L	$81.95
05085 Black 3'W x 2000'L	$125.95
41822 Black 3'W x 4000'L	$239.95
05086 Black 4'W x 2000'L	$194.95
05087 Black 4'W x 4000'L	$274.95
40907 Black 5'W x 600'L	$99.95

COOL TEMPERATURE CROPS

White on Black Plastic Mulch

Lettuce, cauliflower, broccoli, and other cool loving crops thrive in this dual-color, embossed plastic mulch. White plastic faces upward, keeping soil temperature down while increasing the amount of light available to the plant. The black plastic underside allows less light to reach the ground, which helps to control weeds. The co-extruded white-on-black mulch can result in a decrease in soil temperature up to 12°F, even as it reflects light back into the plant canopy. During spring and fall production, the increased light availability promotes faster growth and larger yields. Mulch is 1.25 mil., embossed.

41845 White/Black Mulch 3'W x 4000'L	$269.95
40815 White/Black Mulch 4'W x 600'L	$81.95
40816 White/Black Mulch 4'W x 2400'L	$233.95
41846 White/Black Mulch 4'W x 3000'L	$219.95

TOMATOES

SRM Red Mulch

Increase tomato yields up to 20%.

Back by popular demand is the highly reflective 1mil. smooth mulch. USDA and university researchers have found that red mulch enhances the growth and yield of several vegetable crops, including tomatoes. The color of the mulch changes the intensity of certain wavelengths of light, and the modified light increases plant growth and yields. Trials have shown tomato yields to be as much as 20% higher using SRM-Red mulch than using black plastic mulch. Results, however, will vary from year to year depending on available light. Mulch is 1.0 mil., embossed.

70027 SRM Red 4'W x 600'L	$151.95
70026 SRM Red 4'W x 3000'L	$439.95

HEAT-LOVING CROPS

Solar Plastic Mulch

Ken-Bar's exclusive Solar Mulch provides the increased soil warming of clear mulch, but with the weed suppression of black mulch. By utilizing a carefully balanced blend of polyethylene with a specific light modifying pigment, Solar Mulch transmits near infra-red radiation to heat the soil while it simultaneously blocks PAR (photosynthetic active radiation) that is responsible for the vigorous weed growth under clear mulch. This is an excellent product for heat loving crops like cantaloupe, watermelon, and other cucurbits. For maximum weed suppression, plastic should be laid soon after tilling. Mulch is 1.0 mil., embossed.

70175 Solar Mulch 4'W x 600'L	$76.95
70176 Solar Mulch 4'W x 2400'L	$240.95
70177 Solar Mulch 4'W x 4000'L	$399.95

GROUND COVERS

GROW CHRYSANTHEMUMS OUTDOORS

Fall mums can be easily grown outdoors from rooted liners all the way through to a finished product. Harris Seeds offers fall mums and asters grown by Raker-Roberta's and Mast Young Plant. They can be ordered from winter through spring, grown to order by our liner specialist just for you! Request your fall mum and aster price lists today! Call **800.544.7938**, or visit us online at **harrisseeds.info/mums**

The ground covers featured on this page are a vital component of outdoor chrysanthemum production to ensure a clean growing environment. Also see page 225 for perennial pots and mum pans.

ANCHORING PINS & STAKES

Anchor Pins

Anchor Pins are great for anchoring landscape fabric, drip irrigation, and fencing. Pins are made from 11 gauge steel with angled tips to help pierce the ground for faster and easier installation. Pins measure 1"W x 6"L, package 500 per box.

41333 Anchor Pins 500ct. $98.95

UltraWeb 3000 Ground Cover

By applying the latest state of the art weaving technology, Dewitt's Ultraweb 3000 delivers a superior UV-treated ground cover at a lower cost. Made from 2.2 oz. woven ground cover landscape weed control fabric, this cover is an excellent choice for greenhouses, holding areas, and more. Cover features 12" spaced, colored lines for easy plant alignment.

41337 Ultra-Web 4'W x 600'L $326.95

LARGE GROUND STAKES

Made of heavy duty plastic, these black ground stakes are great for securing any landscape fabric. Use them to hold plastic mulches in place or secure row covers against the wind. Stakes measure 7½" long.

40555 Stakes 25 ct. $13.95

40555 Stakes 100 ct. $36.95

5-9@$34.95 ea.

10@$29.95 ea.

Sunbelt™ Ground Cover

DeWitt Sunbelt woven ground cover consists of 3.2 oz. polypropylene, which resists tearing, puncturing and weed penetration. Sunbelt is ideal for greenhouses and outdoor displays and as a weed barrier for plantings where a weed free environment is a must. DeWitt Sunbelt is striped every 12" for aid in plant alignment and is UV stabilized to last even in direct sunlight. Fabric blocks 99% of light and usually lasts 8-12 years.

41336 Sunbelt Ground Cover 4'W x 300'L $174.95

DRIP IRRIGATION SUPPLIES

Pressure Regulators

Drip Irrigation Valve & Sleeve End Kit

IrritecTape Premium 5/8" Light Drip Tape

Water Filter

Header Pipe/Main Line Elbows, Tees, and Couplers

P1 Thinwall 5/8" Light Drip Tape

Header Pipe Punch

T-Punch Tool

Header/Main Line Pipe

Pressure Regulators

Keep proper pressure in your drip system so your lines don't blow out. Too much pressure can expand the emitters or cause drip line failure, leaving you with a costly and time-intensive repair.

40597 Regulator 30 PSI	$28.95
40595 Regulator 12 PSI	$28.95
41913 Regulator 10 PSI	$20.95

Water Filter

Having a filter on your drip irrigation system is highly recommended, as filters keep larger particles from passing into your drip tape and emitters causing them to become plugged. Filter can be used with 1", ¾", and ½" main line systems by using a ¾" female tape lock adapter.

41297 Filter	$29.95
41296 200 Micron Filter	$21.95

Drip Irrigation Valve & Sleeve End Kit

Each kit contains 5 drip line valves and 5 drip line end sleeves.

40281 End Kit	$9.95; 5 @ $8.95 ea.

Drip Punch Tools

Quickly punch holes in your header pipe to install fittings and emitters. The Header Pipe Punch Tool makes a punch for standard .4" barb drip line valves. The T-Punch Tool is a metal cutting tool that allows you to punch holes in your header pipe to attach drip emitters and other attachments. It cleanly cuts a $\frac{1}{8}$" hole, or press the knob on the handle to expand the $\frac{1}{8}$" hole to ¼".

41031 Header Pipe Punch	$24.95
41258 T-Punch Tool	$9.95

Header Pipe/Main Line Elbows, Tees, and Couplers

These Power-Loc™ fittings allow you more flexibility along with the ability to add 90 degree angles, splits, and make repairs to your irrigation systems. The connectors tighten down on the header pipe, making a clean, drip-less connection.

41274 Elbow for 1" Pipe	$7.95
41275 Elbow for ¾" Pipe	$5.95
41277 Tee for 1" Pipe	$7.95
41278 Tee for ¾" Pipe	$6.25
41280 Coupling for 1" Pipe	$4.25
41281 Coupling for ¾" Pipe	$4.25

Header/Main Line Pipe

Drip irrigation main line and header pipe tubing delivers water to drip lines and emitters that keep your plants watered and healthy. Emitters and valves are easily inserted into the main line drip irrigation tubing by using a punch tool. Available in different diameters and many lengths to fit your irrigation needs.

40503 1" Header Pipe 250'	$174.95
41821 ¾" Header Pipe 500'	$144.95
41284 ¾" Header Pipe 250'	$119.95
41729 ¾" Header Pipe 100'	$59.95

Header Pipe/Main Line Closures

The Power-Loc™ closure tightens down on the header pipe making a clean, drip-less cap to your system. Closures also feature a removable cap to allow you to easily flush your system. The Figure 8 closures are a quick, inexpensive way to close the end of your irrigation system. Run your main line pipe through one hole, bend the pipe over, and run it back through the second hole to form a kink in the line.

41265 Power-Loc for 1" Pipe	$4.95
41266 Power-Loc for ¾" Pipe	$4.25
41262 Figure 8 for 1" Pipe 5ct.	$3.95
41263 Figure 8 for ¾" Pipe 5ct.	$3.50

IrritecTape Premium 5/8" Light Drip Tape

Premium light dripline with seamless construction for strength and ease of installation. Drippers have an integrated inlet filter to protect the flow path from plugging and the extra-large cross-sectional area prevents clogging. Manufactured with the highest quality polyethylene resins producing high strength and abrasion resistance. An excellent coefficient of variation (<2.0%) ensures highly uniform water distribution. Two green stripes identify the dripper side for correct installation. Ideal choice for close outlet requirements and low application crops with above ground, under mulch or subsurface applications.

42125 P1 Drip Tape 8 MIL., 8" Space, .17 GPH, 8,000' Roll	$345.95
42126 P1 Drip Tape 8 MIL, 12" Space, .17 GPH, 9,186' Roll	$359.95
42127 P1 Drip Tape 8 MIL, 8" Space, .25 GPH, 8,000' Roll	$345.95
42128 P1 Drip Tape 8 MIL, 12" Space, .25 GPH, 9,186' Roll	$359.95
42129 P1 Drip Tape 15 MIL, 8" Space, .25 GPH, 4,100' Roll	$339.95

P1 Thinwall 5/8" Light Drip Tape

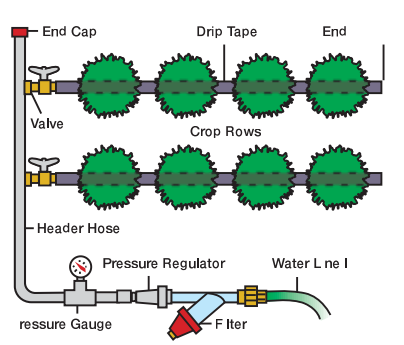

Premium light thin wall dripline for row crop applications. P1 is manufactured with the highest quality polyethylene resins producing high strength and abrasion resistance. The seamless construction makes it stronger and more durable. Injection molded drippers offer a high degree of plug resistance, lower coefficient of variation and highly uniform water distribution. P1 is standard with an outlet flap which reduces soil ingestion and root intrusion. Two ocher stripes identify the dripper side for correct installation. The integrated inlet filters provide additional protection against clogging.

42130 Irritec Tape 8 MIL, 8" Space, .21 GPH, 7,540' Roll	$329.95
42131 Irritec Tape 8 MIL, 12" Space, .21 GPH, 7,540' Roll	$329.95
42132 Irritec Tape 10 MIL, 8" Space, .28 GPH, 7,540' Roll	$324.95
42133 Irritec Tape 10 MIL, 12" Space, .28 GPH, 6,000' Roll	$324.95

For other sizes of drip tape and for pallet pricing of 16 rolls or more, please contact your sales representative.

DRIP IRRIGATION KITS

Drip Irrigation Kit for Smaller Acreage Farms

Drip irrigation sends a uniform distribution of water directly to the root zone of plants, avoiding waste and runoff. This system can save up to 50% water compared to conventional systems and minimizes negatives like soil compaction, erosion, and weed growth. It also tends to minimize leaf burn and fungal diseases. Kits can be configured in many layouts by cutting the header and drip tube to specified lengths. The maximum length to cut each line is 550'. These systems may be used with black plastic mulch by laying drip tape under the plastic.

Components include: (1) Roll 1" x 250 ft. Flat Tube Header/ Main Line; (3) Rolls 10 mil. x 1000 ft. "T-Tape" Drip Line; (1) 1" Pressure Regulator with 1" Adapter (garden hose inlet); (1) 1" Screen Filter with Adapter and Clamp; (1) 1" End Plug for Head Line w/ Clamp; (1) Pressure Gauge with Stake; (30) Drip Line Connectors with Shut-Off Valve; (1) Hole Punch for Head Line; (30) Drip Line End Sleeves; (5) Drip Line Repair Couplers.

40131 Drip Irrigation Kit $569.95 $569.95
Save $106.95!

Medium Drip Kit

Components include: (1) Hose adapter; (1) ¾" Filter; (1) ¾" Pressure Regulator; (1) Pressure Gauge with Tee; 100 ft. Soft Poly Header/Main Line; (1) Roll 10 mil. x 1000 ft. Drip Line; (20) Drip Line Connectors with Shut-Off Valves; (1) Hole Punch for Header Line; (20) Drip Line End Sleeves; (5) Drip Line Repair Couplers; (1) End Cap for Header Line.

40184 Medium Drip Irrigation Kit $315.95
Save $32.65!

IRRIGATION

Dramm Watering Wands

Known for their high quality, Dramm is the industry standard for your watering wand needs. Each 30" wand features a 400 ppl water breaker head and a thumb shut off valve.

41915 16" Watering Wand $17.50; 2@ $16.50 ea.
40205 30" Watering Wand $21.50; 2@ $19.95 ea.

Dramm Seedling Nozzle

The seedling nozzle allows you to water fragile plants, seedlings, and cuttings without fear of knocking them over. The nozzle sprays at a rate of ½ gallon/minute.

40320 Seedling Nozzle $12.25

Dramm Fogg It Nozzle

This nozzle allows you to mist young seedling and cuttings. The nozzle has three misting jets and sprays at a rate of 1 gallon of water/minute.

40321 Fogg It Nozzle $14.25

Dramm Siphonject Fertilizer Mixer

The Dramm "Siphonject" Fertilizer Mixer draws a concentrated fertilizer solution from a bucket through a flexible suction tube, diluting it with the passing water stream at an approx. 20 to 1 ratio. This plastic siphon unit contains ¾" male and female hose threads.

40122 Dramm Siphonject $17.95

Dramm Water Breaker Nozzles

Get professional watering performance with Dramm PPL Water Breaker Nozzles, designed to deliver a soft, rain-like flow that thoroughly waters plants while helping protect foliage and growing media from harsh water pressure. Ideal for commercial greenhouses, nurseries, garden centers, propagation areas, and home gardens, these durable water breakers make hand watering faster, gentler, and more efficient.

The 400PPL provides a gentler flow well suited for seedlings, young plants, propagation, and smaller containers. The 750PPL offers increased water volume for efficient everyday watering of bedding plants, greenhouse crops, nursery stock, and containers. For demanding commercial applications, the 1000PPL delivers high-volume watering for faster coverage of large production areas, established plants, and larger containers.

42118 Dramm 400 Water Breaker $23.95
42017 Dramm 750 Water Breaker $23.95
42119 Dramm 1,000 Water Breaker $23.95

Ken-Bar Item

IRRIGATION (CONT.)

Dramm Water Timer
Save time and water! This mechanical automatic water timer shuts off irrigation and sprinklers after a preset duration to conserve water and prevent overwatering. The automatic water timer can be set to water for any length between 5 and 120 minutes. Just turn your water spigot on and set the timer. Fits all standard 3/4" garden hose fittings.

40207	$19.95

Automatic Vent Opener
Use this automatic vent opener to ensure your plants do not over heat in your greenhouse or cold frame. Easily attachable to most greenhouse vents and cold frames, the opener operates automatically and can be adjusted to open at temperatures between 60-77°F. No batteries or electricity needed.

70011 Automatic Vent Opener	$63.95
70184 Replacement Cylinder	$29.95

VENTING

High Tunnel/Greenhouse Vent with Auto Opener
This easy to install vent can be placed in the end wall to provide supplemental ventilation for extremely hot conditions. During moderate weather, high tunnels are generally vented by rolling up the sides and opening the doors on each end. However, extremely hot weather often requires additional ventilation, with the best vent position at the roof or peak of the structure. Each vent comes with two types of vent openers: manual and auto-temperature. The manual opener is operated with a hand pull wire, while the auto-temperature opener operates automatically and can be adjusted to open at temperatures between 60-77°F. Vent acts as a great insurance policy if you are unable to open your main vents or other venting fails. Installs in minutes with wiggle wire and channel locking. Measurements are of actual vent area and do not include the frame.

70144 Vent 12"W x 12"H	$169.95
70145 Vent 18"W x 18"H	$209.95
70146 Vent 24"W x 24"H	$248.95
70164 Vent 30"W x 30"H	$299.95

FERTILIZERS

A. Nutri-Cal®

Nutri-Cal Liquid Calcium complex provides a unique delivery system which protects the calcium from forming an insoluble compound, enabling more efficient movement of calcium to the plant where it is needed most. It is the best source of calcium for fruits, vegetables, ornamentals, and all living plants. Nutri-Cal also improves fruit firmness and storage quality, prevents calcium related disorders like blossom-end rot, corking, fruit rot, hollow heart, and more. Can be used as a foliage spray or as a drench. Concentrates mix 3 oz./gallon for foliar spray.

41047 16 oz. Concentrate $27.95
41049 1 gal. Concentrate $54.75

B. Nutri-K Concentrate

One of the most critical components for healthy plants is potassium. Curling leaves and brown or yellow spots often indicate a potassium insufficiency. Potassium-starved plants are far more likely to succumb to drought stress, fungal attach or frost damage, and produce much smaller fruit. Mix 1-3 oz./gallon depending on crop.

41241 16 oz. Concentrate $20.95

C. Suståne Complete 8-2-4 WDF

Sustane complete is a water dispersible fertilizer that provides a powdered mix of organic nutrients and bio-stimulants formulated specially to provide complete nutrition. WDF is specially formulated for superior hydroponic and fertigation-based nutrient management programs. Suståne Complete promotes greater root development, improves buffering against changes in pH and is rich in humic acids. Mix 1 tbsp./gallon, or 1-2 lb./100 gallons. OMRI Listed.

41619 Suståne Complete $15.95

D. Suståne 4-6-4 All Natural Flower & Vegetable Plant Food

Suståne 4-6-4 All Natural Fertilizer promotes a rapid rate of vegetative establishment. Suståne replenishes the soil with a rich supply of humus and all the essential nutrients required for quality growth. Suståne increases the nutrient and water holding capacity of the soil, while strengthening a plants tolerance against hot dry conditions. OMRI Listed.

41616 Suståne 5 lb. $23.95
41616 Suståne 20 lb. $48.95

E. MegaPhos Phosphorus Producing Microbes

MegaPhos SP is a high concentration of a select bacterial strain that aids in transformation of soil phosphorus into an assumable form for plants. MegaPhos can be used as a drench, liquid feed, irrigation, spray, or seed treatment. OMRI Listed.

41853 Mega Phos Inoculant $39.95

F. Exceed Peanut and Cowpea Organic Inoculant

Exceed peat inoculant is a naturally occurring Rhizobium that forms nodules on the roots of the plant and converts atmospheric nitrogen to a form that the plant can use. This inoculant guarantees a minimum of 200 million (2 x 108) viable cells of Rhizobium sp. (Vigna) per gram. 5 oz. package treats up to 100 lbs. of seed. OMRI Listed.

41838 Exceed Inoculant 5oz. $10.95

G. Exceed Soybean Organic Inoculant

Exceed peat inoculant is a naturally occurring bradyrhizobium that forms nodules on the roots of the plant and converts atmospheric nitrogen to a form that the plant can use This inoculant guarantees a minimum of 200 million (2 x 108) viable cells of Bradyrhizobium japonicum per gram. 15 oz. package treats up to 300 lbs. of seed. OMRI Listed.

41839 Exceed Inoculant 15 oz. $10.95

H. Exceed Pea, Vetch and Lentils Organic Inoculant

Exceed peat inoculant is a naturally occurring Rhizobium that forms nodules on the roots of the plant and converts atmospheric nitrogen to a form that the plant can use. This inoculant guarantees a minimum of 200 million (2 x 108) viable cells of Rhizobium leguminosarum per gram. 5 oz. package treats up to 100 lbs. of seed. OMRI Listed.

41840 Exceed Inoculant 5 oz. $10.95

Exceed Pea and Bean Inoculant

This effective inoculant provides the proper live bacteria for many legumes, helping them form nodules that take nitrogen from the air and enrich the soil. By converting nitrogen into a plant-available form, plant growth is enhanced. For peas, beans, lima beans and legumes. 1½ oz. package treats 8 lbs. of seed.1½ oz. package treats 8 lbs. of seed. 6 oz. package treats 50 lbs. of seed. OMRI Listed.

04645 Exceed Inoculant 1.5oz. $7.95
41135 Exceed Inoculant 6 oz. $10.95

SUPPORT, TRELLIS, AND TIES

Heavy Duty Support Netting

Support your crops with our heavy duty plastic support netting. Trellis your beans and cucumbers vertically or lay flat as a cut flower netting. Strong enough to support heavy crops like melons and gourds while gentle enough not to damage delicate tendrils. This long-lasting, UV stabilized material is reusable, lightweight, and easy to install. Mesh size is 6"W x 6½"H.

40905 67"W x 328'L $84.95
40894 6½'W x 30'L $13.50

Grow Bags

The low-cost alternative to rigid plastic pots!

Made from a specially formulated plastic that provides a longer life than any other on the market, these grow bags are ensured to hold up all season. The bags have pre-punched holes for easy draining and stand upright when filled with media. They are ideal for tomatoes, bell peppers, cucumbers, and more. New color, same quality! Now sold in white.

41194 5 Gallon 25ct. $21.95;3@$18.95 ea.
41194 5 Gallon 400ct. $224.95
41195 7 Gallon 25ct. $24.95;3@$22.95 ea.
41195 7 Gallon 400ct. $229.95
41196 10 Gallon 10ct. $24.95;3@$22.95
41196 10 Gallon 200ct. ea. $229.95

Bobbin Plant Hanger with Twine

Great for greenhouse and tunnel grown tomatoes!

These handy plant hangers are designed to be hung over your crops with a horizontal support wire. Bobbin hangers support tomatoes, cucumbers, and other vining crops in greenhouse pro duction. Hangers are wound with 30 ft. of white twine and have two slots to lock in the twine to prevent slippage. At the end of the season, the twine can be easily stripped from the bobbins. Bobbins can be rewound quickly.

41206 Bobbins 50ct. $36.95; 3 @ $32.95 ea.

Vine Clips

Great for trellising plants like tomatoes, cucumbers, and even climbing ornamentals. Simply place trellising or twine in the hinge of the clip and press the clip together around the plant. Clips can be easily removed and used again.

41207 Clips 15 mm 250 ct. $18.95
42084 Clips 25 mm 250 ct. $19.95

Twistems

High quality ¼" wide wire-reinforced green paper ties are widely used for bunching vegetables and for tying plants.

05586 8" 500 ct. $10.95; 2 @ $9.95 ea.
05591 16" 500 ct. $17.95; 2 @ $15.95 ea.

SOIL TESTERS

Electronic 4-Way Analyzer

Now you can quickly test your growing conditions to make sure that your plants are receiving the light and nutrients they need. Just by flipping the switch, you can quickly measure sunlight, soil pH, moisture, and combined N-P-K levels. Full instructions included.

40218 Electronic 4-Way Analyzer $23.95

Professional Soil Test Kits

Test your soil for best plant performance! Results from mailed soil samples can take weeks to arrive. You can save literally hundreds of dollars with this kit compared to sending your soil samples out! This professional kit allows you to test accurately and quickly for pH, nitrogen, phosphorus, and potassium. The medium soil test kit contains enough solutions for 20 tests of each type. The large soil test kit contains enough solutions for over 50 tests of each type and also comes with enough equipment to run three tests at a time.

40478 MediumSoilTestKit $31.95
40585 Large Soil Test Kit $109.95

DISEASE CONTROL

A. MilStop® WP Fungicide 5 lb.

MilStop is an EPA-registered, potassium bicarbonate-based foliar fungicide that kills powdery mildew on contact by pulling water from spores and their growing strands. The patented formulation easily spreads out evenly for great leaf coverage, providing 1-2 weeks of residual protection. Milstop also helps control alternaria blight, anthracnose, black spot, botrytis blight, leaf spot, downy mildew, and more. OMRI Listed for organic production. **Not available for sale in AK, DC, HI, WY.**

41247 MilStop WP 5 lb. $96.95

B. Liquid Copper Fungicide

Bonide's patented formula allows for greatly expanded use, from turf to veggies and fruit to flowers. The concentrate provides excellent control of blights, leaf spots, rusts, mildews, scab, anthracnose and mold with as little as 1½ teaspoons per gallon. Also suitable for indoor use and is a natural way to control disease. 16 oz concentrate. **Not available for sale in AK and DC.**

40568 Liquid Copper Fungicide $29.95

C. Tenet WP Fungicide

New standard for soil-borne disease control, TENET® WP is a second-generation biorational fungicide that contains two powerful species of beneficial Trichoderma fungi that effectively control or suppress soil-borne diseases. Tenet is highly effective against Fusarium spp., Phytophthora spp., Pythium spp., Rhizoctonia spp., Sclerotinia spp., Sclerotium rolfsii, Thielaviopsis basicola, Verticillium spp., as well as Armillaria sp and Rosellinia sp. When applied, the active ingredients that grow in the soil and around the plant's root system using multiple modes of action to suppress and destroy disease causing fungi. The two unique beneficial fungi in Tenet work in complimentary temperature ranges: T. gamsii germinates at 44.6°F and T. asperellum at 53.6°F and both are most active between 75° and 86°F. With this broad range of activity, Tenet is perfect for both early season planting in cooler soil as well as late season applications. For use as a soil drench, soil spray, irrigation, or in hydroponic systems. OMRI Listed for organic production.

41854 Tenet WP Fungicide 1lb $69.95

D. Armory Beneficial Bacteria

Armory is a high concentration of several select beneficial plant bacteria. These powerful species of Bacillus and Streptomyces are all scientifically proven plant growth, yield, and vigor-promoting bacteria. This unique and powerful product not only strengthens plants, but can also be used to greatly enhance soil quality. Soil that has been sterilized with overuse of chemicals, old or re-used potting soil, and other low-quality growing mixes can greatly benefit from being treated with Armory. Armory can be used as a drench, liquid feed, irrigation, spray, or seed treatment. It is compatible with fungicides, insecticides, fertilizers, and biological stimulants. Armory is 100% soluble and it will not clog machinery. Mixing rates depend on application method, 2oz package. OMRI Listed for organic production.

41852 Armory Beneficial Bacteria 2oz. $34.95

E. Revitalize Biofungicide

This uniquely formulated fungicide triggers a plant's immune response in order to control and prevent common fungal diseases.

42030 Revitalize Biofungicide $25.95

Klean Krop® Biological Crop Enhancement

Pure CV-Grow™

BIO STIMULANT

Klean Krop® Biological Crop Enhancement

Get more from your fertility program with Klean Krop, an enzyme-based biological crop enhancement technology designed to improve nutrient efficiency and support stronger, healthier crop growth. Klean Krop helps plants make better use of available nutrients while supporting healthy root development and photosynthesis—helping commercial growers maximize the value of their fertilizer investment. Ideal for operations looking to improve crop performance without unnecessarily increasing inputs, Klean Krop can be incorporated into an existing crop management program to support vigorous, productive plants and higher-quality crops. Its focus on nutrient-use efficiency makes it a practical addition for growers seeking greater input efficiency, reduced fertilizer waste and more sustainable crop production.

42121 Klean Krop 1 oz $8.95
42122 Klean Krop 8 oz $27.95
42134 Klean Krop 8 lb $359.95

Pure CV-Grow™

Supports every stage of plantgrowth with solutions designed to enhance plant health, provide meaningful and measurable results, and improve efficiency. Pure CV™ empowers growers to achieve impressive economic results by enhancing plant health and optimizing crop productivity. With Pure CV™, growers can expect decreased grow and production times, increased yields, and improved crop quality, resulting in higher market value and greater profit potential. By naturally strengthening plants and promoting nutrient absorption, Pure CV reduces the need for costly interventions, saving growers additional inputs and maintenance while supporting resilient, high-quality harvests. Mix 8oz of concentrate per acre for most standard applications. Ships direct from manufacturer, for best results order 30 days before application.

42071 Pure CV Grow 1 Gallon $299.00
42072 Pure CV Grow 2.5 Gallon $747.50

INSECT CONTROL

A. Cucumber Beetle Trap

Cucumber beetles are attracted to squash, cucumbers, pumpkins, and other cucurbits. They can kill or stunt seedlings and damage stems and fruit on older plants. They are known to transmit bacterial wilt and other viruses. Use 1 per 2,000 sq. ft. for monitoring, or every 400 sq. ft. for trapping. Lure lasts 3-4 weeks.

40435 Lure & Trap 2 ct. $15.95

B. Vivatrap Squash Vine Borer Moth Traps

Protect your cucurbit crops from this destructive vine borer. Hang traps at 2-3' height, 5-10' away from grow area to draw borer moths away from vine base. Place to avoid wind and rain. Use one trap + lure per 100-150 square feet of planted area. Deploy traps at first planting, replacing traps as needed through August for best results. 100% safe for pets, nontoxic. 2 traps and pheromone attractants per package.

41930 2ct. $20.95

C. Bee-Scent Attractant

This non-toxic liquid formula attracts foraging honey bees to treated crops, improving crop pol lination that results in additional fruit set and better fruit quality. Monitoring tests show the number of foraging bees increased 28-75% after application. 16 oz. bottle treats ¼ acre.

41205 Bee-Scent $32.95

D. Wire Sticky Trap/Sign Holders

These 11" galvanized wire with loop ends are perfect for holding sticky traps. These holders allow you to place your sticky traps near the soil or higher above the plant canopy. Wire holders also work great for signs and pricing.

41204 Sticky Trap/Sign Holders 10 ct. $15.25
2 @ $13.25 ea.

E. Yellow Sticky Cards

Free your plants of whiteflies, gnats, and other flying insects without using pesticides. These bright yellow 3"W x 5"H cards have been coated on each side with a specially formulated non-toxic adhesive that permanently traps insects when they land.

40237 Yellow Sticky Cards 10 ct. $12.95
40237 Yellow Sticky Cards 50 ct. $34.95

F. Blue Sticky Cards

Blue Sticky Traps attract and catches thrips and leafminers. The easy-to-open 4"x7" trap reverse folds to expose 4"x14" sticky surface with grid for precision monitoring purposes. Non-poisonous and weatherproof. Punched with hole and twist-tie provided to easily hang trap. Easy to handle and count insects without getting sticky.

41203 Blue 5 ct. $8.25; 2 @ $7.50 ea.

G. Thyme Guard

Made from the essential oil extracted from the thyme herb, Thyme Guard is a 100% biodegradable broad spectrum contact and systemic liquid organic bactericide, fungicide, and insecticide for use in all crops, turf, and ornamentals. Thyme Guard is tank mixable with most other chemicals. Do not mix with peroxides and/or sulfonates. Can be used at any time including on harvest day.

41794 32 oz. $41.95

H. 5 Gallon Bucket Fly Trap Lid

Turn a standard 5-gallon bucket into a large-capacity fly trap! The Billy Bob 5 Gallon Bucket Fly Trap Lid uses funnel-style entrances that allow flies to enter the bucket while helping prevent their escape. Simply add the bait or attractant of your choice, attach the lid, and place the trap where flies are a problem. No poisons or sticky adhesives are required. Ideal for farms, barns, livestock areas, greenhouses, garden areas, and other outdoor locations. Reusable—simply empty the bucket and reset the trap as needed. Bucket and bait not included.

42106 Fly Trap Lid $9.95; 2@ $8.95 ea.; 6@ $8.25 ea.

I. MicroLife FGX Fungus Gnat Spray

Help manage troublesome fungus gnats with MicroLife FGX Fungus Gnat Spray. Ideal for greenhouses, propagation areas, indoor growing spaces, houseplants, and container plants, FGX offers growers and gardeners a convenient solution for fungus gnat problems associated with moist growing environments. An excellent addition to plant care and pest management programs for commercial growers, greenhouse operators, and home gardeners. Use according to label directions.

42116 FGX Fungus Gnat 8oz $47.95
42117 FGX Fungus Gnat 1 Gallon $176.95

ANIMAL CONTROL

Heavy Duty Deer Fencing

Discourages deer and other small animals from destroying gardens and other vegetation. Deer Fence PRO is over 5 times the weight of standard Deer Fence and works more as a barrier than a deterrent. Light weight but strong, this deer fencing is easy to install (for best results, install at a slight angle to deter deer from jumping over). Made of UV resistant polypropylene strands bonded together, this fence last for years. Size: 7' x 100'. Mesh size on fencing measures .75" x .75". Fence does not come with stakes.

40341 Fencing 7'W x 100'L $92.95

Deer-X Fencing

Install this black polypropylene temporary fencing around your property, slanted or vertically, to help keep deer out. Mesh size is ⅝"W x ½"H. Does not include stakes.

05058 Deer-X Fencing 7'W x 100'L $30.95

Bird Scare Balloon

Used in commercial orchards for years, these bird scare balloons are a great deterrent. Place the balloons on trees, buildings, and poles so they intersect the bird's flight path. Place balloons about every 400 sq. ft. of area. Balloons feature reflective stickers and Mylar tails.

40639 Bird Scare Balloon
$12.75;
6 @ 11.95 ea.

CUT FLOWER SUPPLIES

A. Stem Cutter

This steel guillotine stem cutter ensures a straight, smooth cut for small bunches of flowers making your work more effective and efficient. Blade lock attached to ensure safe movement but this stem cutter is designed to be mounted to a flat surface.

42055 Stem Cutter $129.95

B. Cut Flower Bucket 13L Conical

This sleek, conical-shaped display bucket offers a modern way to showcase floral arrangements or other cut flower selections in your retail space.

42023 Cut Flower Bucket 13L 5 ct. $29.95
42023 Cut Flower Bucket 13L 20 ct. $110.95

C. Cut Flower Bucket 10 L Wide

Similar design to the conical bucket, only shorter and wider for displaying shorter stems or flowers with more branching habit.

42024 Cut Flower Bucket 10L 5 ct. $27.95
42024 Cut Flower Bucket 10L 20 ct. $104.95

D. Sealed Bottom Bouquet Sleeves

Sleeves are great for consumer custom selection or for pre-packed bouquets. Perfect for the cut flower wholesale and retail markets, the clear tapered poly sleeves feature a sealed bottom that prevents leakage. Three sizes are available: Small 7"W x 2½"W x 25"H, Medium 9"W x 3½"W x 14"H, Large 13½"W x 4"W x 25"H. Packaged 100 per bundle.

41350 Sealed Sleeves Small $19.95
41351 Sealed Sleeves Medium $20.95
05714 Sealed Sleeves Large $22.95

E. Natural Kraft Paper Bouquet Sleeves

These popular sleeves are a consumer necessity when shop ping, carrying to the car, and protecting delicate plants and flowers during transport. Sleeves assure a positive post-sale consumer experience. Two sizes are available. Packaged 50 per bundle.

41777 X-Small 12"W x 4"W x 12"H $20.95
41175 Small 14"W x 4"W x 14"H $23.95
41776 Medium 16"W x 5"W x 16"H $24.25
41176 Large 18"W x 5"W x 16"H $29.95

F. Open Bottom Bouquet Sleeves

These clear, cello-tapered plastic cut flower sleeves offer consistency for a beautiful bouquet presentation at farmers markets, roadside stands, or florist shops. An open bottom helps organize different stem lengths into a nice, consistent bouquet. Four sizes available: Small 10"W x 2"W x 16"H, Medium 12"W x 3"W x 16"H, Large 16"W x 5"W x 16"H, and Extra Large 20"W x 5½"W x 18"H. Packaged 50 per bundle.

40195 Small $11.25
05711 Medium $11.95
05712 Large $16.95
05713 ExtraLarge $19.95

The Natural Market™ Petal Pouch™

Handle Sleeve looks like a local Farmers Market kraft paper sleeve with the added convenience of the Petal Pouch™ carry handles. The clean, classic design wraps your plants and fresh flower bouquets in the natural warmth and look of Kraft Paper, highlighting their color and beauty. Made from fully recyclable plastic, the Natural Market™ Petal Pouch™ Handle Sleeve is water-resistant with its sealed bottom, helping protect your car and other furnishings during use. Sleeves measure 20" across at the top and are 22" long and taper to 6.6" at the bottom. 50 Sleeves Per Bundle.

42063 Handled Sleeves $44.95

Cut Flower Display

The 6 bucket display stand takes up less space than our larger model, and with wheels attached, you can easily move it to the best location for prime sales. Comes with 6 plastic buckets and assembles quickly and easily. Measures 17" w X 36" h X 21" d.

41825 6 Bucket Display Stand $177.95

Cut Flower Support Netting

Heavy duty, plastic white net material is used to support plant stems during the growing period. Support netting creates a 6" x 6½" grid for plants to grow through.

05034 Support Net 36"W x 328'L $50.95
05035 Support Net 36"W x 3280'L $318.95
05038 Support Net 48"W x 328'L $88.95
05040 Support Net, 48"W x 3280'L $359.95

Quick Dip *Eliminate bent neck!*

Floralife's Quick Dip is an instant hydration pretreat ment solution used to maximize fluid uptake and keep flower stems free flowing. The solution comes ready to use with no mixing required. Can be used on all flower varieties; simply re-cut flowers underwater and place stems in 2" of Quick Dip for one second.

40536 Quick Dip 1 Gallon $29.95

CROP PROTECTION

Slitted Row Cover

Low Tunnel Covers and Support Wire

Plant crops up to two weeks earlier!

Use these slightly translucent row covers in northern and cooler areas for better temperature control and increase soil temperatures. Plant crops 14 or more days earlier to promote earlier maturity with higher yields in tests. Daytime temperatures under these covers are elevated an average of 10-30°F. for better crop growth. The slits remain open during the day for ventilation in extreme heat, closing at night for heat retention and frost protection (1-4°F.). Harvest crops up to 2 weeks earlier than normal. The use of 76" Wire Tunnel Support Hoops (05042) is recommended.

Slitted Row Cover

Slightly translucent character. 8 mil.

05041 Slitted 6'W x 1000'L	$164.95
70038 Slitted 6'W x 500'L	$105.95

Wire Tunnel Support Hoops

Kozy-Coat Plant Protectors

Be the first to have local tomatoes, peppers, and other crops at your roadside stand or farmers' market! Place these protectors over your plants and fill the chambers with water. They ward off damaging cold temperatures as low as 10°F. in tests. Heat is absorbed into the water-filled chambers during the day and is released to the inside section as the outside temperature drop.

04768 Kozy-Coats 6 ct.	$33.95; 2 @ $31.95 ea.

76" Wire Tunnel Support Hoops

Use with slitted row covers and floating row covers to create low tunnels. Wire hoops (#10 gauge wire lengths, 76" long each, shipped flat in a tube) are easily bent to create a 3 ft. arch in the row cover every 5 ft.

05042 Hoop 76" 100ct.	$183.95

54" Wire Tunnel Support Hoops

Use with our 54" punched row covers to create smaller tunnels. These shorter hoops are great for supporting row covers on small delicate crops. 10 gauge wire.

70053 Hoop 54" 25 ct.	$86.95
70053 Hoop 54" 100 ct.	$157.95

Looking for larger sizes or quantities of floating and plastic row cover?

HARVEST KNIVES

A. Orange Handled Field Knife

Whether you're harvesting cabbage, trimming broccoli, cutting thick pumpkin vines, or dividing field-grown perennials, this knife can handle the task. The heavy duty 10" stainless steel blade is mounted on a bright poly-handle that won't get lost in the field.

40812 Orange Handled Field Knife $18.50;
3-11 @ $16.50 ea.; 12 @ $15.50 ea.

B. Field Knife *A multi-purpose wonder!*

This 8" field knife is made out of the highest quality stainless steel and has many uses around your farm and greenhouse. Use to harvest thick stemmed pumpkins and squash, or use to split field grown perennials.

40540 Field Knife $16.95;
3-11 @ $15.95 ea.; 12 @ $14.95 ea.

C & E. Lettuce Knives

Two blades in one: Short 2½" blade for cutting through base of plant; long 7⅛" blade for trimming. 5" handle.

40014 Stainless Steel; Yellow Plastic Handle
$16.95; 3-11 @$14.95 ea.; 12 @$13.95 ea.

40015 Carbon Steel; Wood Handle
$15.95; 3-11 @ $14.95 ea.; 12 @ $13.95 ea.

D & F. Broccoli Knives

7⅛" gently curved blade with 5" handle.

40012 Stainless Steel; Yellow Plastic Handle
$16.95; 3-11 @$14.95 ea.; 12 @$13.95 ea.

40013 Carbon Steel; Wood Handle
$15.95; 3-11 @ $14.95 ea.; 12 @ $13.95 ea.

G. Stainless Steel Hand Sickle

Trim berry bushes, woody shrubs, or small trees with this sturdy sickle. 6½" blade is lightly serrated and mounted on a bright plastic handle that is easy to find in the field. Both blade and handle meet requirements for food safety, making this sickle a good fit for farms and food processing operations.

40811 Stainless Steel HandSickle $13.50;
3-11 @ $12.50 ea.; 12 @ $11.50 ea.

H. Small Field Knife

This 3½" stainless steel blade is strong enough to cut through the base of most plants. Use for jobs when you need a knife, but not a large blade. Use for opening bags of soil and seed or trimming stems and harvesting. Great quality at an affordable price!

40541 Small Field Knife $7.95
3-11 @ $6.95 ea.; 12 @ $5.95 ea.

I. Grape Knife *Hooked blade protects fruit!*

This knife features a 3" stainless steel blade and a heavy duty plastic handle. The curved end of the blade allows you to get into tight spaces while harvesting without the worry of sticking or cutting the plant. Great for harvesting items like summer squash, melons, and peppers.

40542 Grape Knife $6.95;
3-11 @ $6.50ea.;12 @ $6.25 ea.

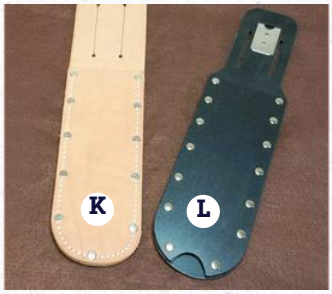

Asparagus Knife

J. Pistol Grip Asparagus Knife

Pistol grip handle allows you to comfortably harvest asparagus spears while keep the cutting edge at the proper angle to cut the spears below the soil. Asparagus knife features rubber handle, thumb guard, 15"L shaft, 1½"W x 7"L blade. Also works great as a weeder for stubborn tap rooted weeds like dandelions.

41143 Asparagus Knife $24.95

K & L. Knife Sheath

Each sheath can handle 8" blades and features two belt loop slits. The fine quality leather sheath works well with any of our knives. The black non-absorbent plastic knife sheath is also is a great option for cleaning and sanitizing your sheath. Plastic sheath features a stainless steel metal belt clip that easily fits a 7¾"L x 2⅛"W knife blade.

40016 Leather Sheath $19.95;
3-11 @ $17.95 ea.; 12 @ $16.95 ea.

41189 Plastic Sheath $13.95;
3-11 @ $12.95 ea.; 12 @ $11.95 ea.

M. Processing Knife

Built for the demands of commercial growing and harvesting operations, this Processing Knife features a compact 3.75" stainless steel blade for controlled, efficient cutting and processing. The bright orange handle provides high visibility in the field, greenhouse, packing area, or processing facility, making the knife easier to locate during busy workdays. Its versatile size makes it a practical choice for harvesting and processing vegetables, seed potatoes, and other produce where clean, controlled cuts are needed.

42096 Processing Knife 3.75" $5.95;
3-11 @ $5.50 ea.; 12 @ $4.95 ea

TOOLS

HARRIS SEEDS BYPASS PRUNERS

HARRIS SEEDS GARDEN SCISSORS

HARRIS SEEDS DUAL BLADED GRAFTING KNIFE

Bypass Pruners

Featuring sharp, precision-ground blades designed for clean precise cuts on live plants or branches. With an ergonomic grip and durable construction, these pruners offer comfort and control.

42054 Bypass Pruners $19.95

Plastic Handled Cut Flower Scissors

These 2.5 inch scissors feature sharp stainless steel blades and a lightweight plastic handle for easy maneuverability. Perfect for delicate trimming tasks, they offer precision and comfort for both indoor and outdoor work.

42056 Garden Snips $12.50

Harris Seeds Dual Bladed Grafting Knife

The dual-bladed grafting knife is a specialized tool essential for precise and efficient grafting in horticulture and arboriculture. Featuring two sharp, distinct blades – one straight-edged and the other hooked or curved – it enables gardeners and botanists to make clean cuts on both scion and rootstock, facilitating the joining of plant tissues with utmost accuracy. The straight blade is ideal for creating smooth, uniform cuts, while the hooked blade assists in shaping and preparing the grafting site. This versatile tool ensures successful graft unions, promoting healthy plant growth and propagation with ease and precision.

42041 Grafting Knife $16.75

HARVESTING SLEEVES

SOFT-SIDED HARVESTING BAG

Harvesting Sleeves

These 18" canvas sleeves protect your arms while picking and pruning. Great for harvesting summer squash, raspberries, or any other thorny or spined crop. Each sleeve is adjustable at the wrist and a sown in elastic band keeps them in place. Machine washable. Sold in pairs.

40679 Harvesting Sleeves $12.95;
2-11 @ $15.50 ea.; 12 @ $14.95 ea.

Soft-Sided Harvesting Bag

A real time and back saver!

Made of weather-resistant nylon and a strong upper steel frame, these handy bags will hold up to years of harvesting. A steel frame keeps the top open for quick harvest, while the draw ropes are adjustable for bag depth and unhook easily to empty fruit through the bottom. The front lip features extra padding to protect your fruit from bruising. Harvest bag has a 1 bushel capacity. Order in quantity and save, colors may vary.

40680 Harvesting Bag $72.95;
2-5 @ $68.95 ea.; 6 @ $64.95 ea.

CUT FLOWER QUICK FACTS

Genus	Days to Germination	Weeks to Transplant	Days from Sow to Harvest	Fresh or Dried	Direct Seed or Transplant	Harvest Stage	Vase Life (Days)	Support Netting	Avg. Seeds / Lb
Achillea	7-14	8-10	120	Both	Transplant	Flowers are fully open	5-8	-	2 mill.
Ageratum	3-5	6-8	85-105	Fresh	Transplant	Buds are just opening	7-10	Y	200,000
Agrostemma	7-14	4-6	70-85	Fresh	Both	Buds are just opening	7	-	80,000
Allium	7-14	8-10	120-140	Fresh	Transplant	Flowers are 80% open	14-21	-	1,200
Amaranthus	7-10	4-6	85-100	Both	Both	Flowers are 75% open	7-10	Y	600,000
Ammi	7-14	6-8	85-110	Both	Both	Flowers are 80% open	5-8	Y	700,000
Ammi, Daucus	12-18	6-8	95-105	Fresh	Both	Flowers are 80% open	5-8	-	700,000
Ammobium	4-8	4-6	70-80	Both	Transplant	Flowers are 50% open	7-10	-	990,000
Anemone	10-14	7-8	130-150	Fresh	Transplant	Flowers are 30-40% open	5-7	-	900,000
Aquilegia	8-10	9-10	120-150	Fresh	Transplant	Flowers are 50-60% open	5-8	-	300,000
Asclepias	14-21	7-8	105-120	Fresh	Transplant	Flowers are 50-60% open, scorch stems	5-8	-	100,000
Asters	8-10	6-8	90-110	Fresh	Both	Flowers are 50-60% open	7-10	Y	200,000
Astilbe	14-20	8-9	350-375	Both	Transplant	Flowers are 50-60% open	5-8	-	4 mill.
Bells of Ireland	14-35	8-10	95-120	Both	Both	Stems at appropriate length	8-10	Y	11,000
Bupleurum	14-21	8-10	85-100	Fresh	Both	Flowers are fully open	10	-	200,000
Calendula	5-14	4-6	60-70	Fresh	Transplant	Flowers are fully open	5-7	-	50,000
Campanula	7-10	9-11	130-150	Fresh	Transplant	2-3 flowers are open	7-10	Y	400,000
Carthamus	5-8	NA	60-80	Both	Direct Seed	Buds are just opening	5-8	-	10,000
Celosia	3-14	4-6	70-110	Both	Transplant	Flowers fully developed	7	Y	400,000
Centaurea	5-10	4-6	50-70	Fresh	Both	Buds are just opening	6-10	-	100,000
Cobaea	14-21	6-8	120-140	Both	Transplant	Buds are just opening	5	Y	5,500
Cosmos	5-8	4-6	70-90	Fresh	Both	Petals are expanding	5-6	Y	50,000
Craspedia	10-14	4-5	110-120	Both	Transplant	Flowers are fully open	10-14	Y	453,600
Dahlia (Seed)	5-10	4-5	75-90	Fresh	Transplant	Flowers are 3/4 - fully open	3-7	-	75,000
Delphinium	7-20	13-19	110-160	Both	Transplant	Flowers are 40-50% open	6-8	Y	200,000
Dianthus	3-9	10-12	100-125	Fresh	Transplant	Flowers are 40-50% open	7-10	Y	100,000
Digitalis	6-8	10-12	110-160	Fresh	Transplant	Lower 1/3 of flowers are open	7-9	Y	200,000
Echinacea	8-20	10-12	120-160	Both	Transplant	Petals are expanding	7-10	-	100,000
Echinops	14-20	12-15	110-130	Both	Transplant	When color changes	12+	-	3,000
Eryngium	14-20	12-15	160-200	Both	Transplant	When color changes	12+	-	300,000
Gomphrena	3-10	8-10	75-90	Both	Transplant	Buds are 75-100% open	7	-	100,000
Gypsophila	6-10	4-6	50-110	Both	Both	Flowers are 60-70% open	7-10	-	500,000
Kale, Orn.	4-10	5-7	100-110	Fresh	Transplant	Stems at appropriate length	12+	Y	100,000
Kniphofia	14-20	10-12	190-250	Fresh	Transplant	Lower florets are opening	7-10	-	200,000
Larkspur	10-14	6-8	85-110	Both	Both	Flowers are 25-35% open	6-8	Y	100,000
Lavender	4-20	8-10	100-110	Both	Transplant	Buds are just opening	9-12	-	400,000
Leucanthemum	9-14	10-12	280-365	Fresh	Transplant	Buds are just opening	8-10	Y	300,000
Lisianthus	7-14	10-12	154-168	Fresh	Transplant	2-3 flowers are open	14-21	Y	700,000
Lupine	14-21	4-6	365	Fresh	Both	Flowers are 80% open	5-10	Y	22,000
Marigold	5-8	8-12	70-80	Fresh	Both	Flowers are fully open	7-10	-	100,000
Matricaria	3-5	10-12	100-110	Both	Transplant	Flowers are 80% open	10	-	340,000
Monarda	10-15	8-10	360	Both	Transplant	Petals are expanding	10-14	-	900,000
Nigella	10-14	NA	65-85	Both	Direct Seed	Petals just opening or when pods form	7-10	-	20,000
Orlaya	8-10	6	65-70	Fresh	Both	Flowers are 50-75% open	7-10	Y	20,000
Poppy	7-12	4-5	85-100	Fresh	Transplant	Buds are just opening	5-7	-	2 mill.
Ptilotus	5-7	6-8	125-195	Both	Transplant	Flowers are 50-60% open	10-14	-	400,000
Rudbeckia, Annual	7-14	4-6	80-110	Fresh	Transplant	Buds are just opening	7-14	-	600,000
Rudbeckia, Perennial	14-20	12-14	175-365	Fresh	Transplant	Buds are just opening	5-7	-	400,000
Salvia	10-14	14-16	120-130	Both	Transplant	Flowers are 40-50% open	7-10	-	400,000
Scabiosa	10-18	12-15	80-110	Fresh	Transplant	Buds are just opening	5-7	Y	30,000
Snapdragon	4-14	8-9	120-150	Fresh	Transplant	Flowers are 40-50% open	8-14	Y	3 mill.
Statice	3-14	6-8	90-120	Both	Transplant	Flowers are 70-80% open	10-14	Y	150,000
Stock	10-18	6-8	90-100	Fresh	Transplant	Flowers are 30-50% open	7	Y	200,000
Strawflower	7-10	3-5	95	Both	Transplant	Flowers are fully open	14-21	Y	79,000
Sunflower	4-8	2-3	45-100	Fresh	Both	Petals start to lift	7-14	-	See page 201
Sweet Pea	7-14	3-4	65-80	Fresh	Both	Flowers do not open after cutting	5-7	Y	4,000
Tithonia	5-10	8-10	100-120	Fresh	Transplant	Flowers are 90-100% open	7-10	Y	400,000
Trachelium	7-15	8-12	120-150	Both	Transplant	Flowers are 50-75% open	10-14	Y	440,000
Verbascum	4-8	10-12	110-125	Fresh	Transplant	First flower just opening	4	-	300,000
Verbena Bon	5-10	9-11	90-105	Fresh	Transplant	Florets are 75% open	7	-	2 mill.
Zinnia	5-10	4-6	60-80	Fresh	Both	Flowers are 75-100% open	5-10	-	50,000

VEGETABLE SEED PLANTING GUIDE

Crop Planning Strategies will be unique to your climate, soil structure, growing conditions and practices, but when working with a diverse set of crops it helps to have some guidelines to start from. We hope that this Harris Seeds Vegetable Seed Planting Guide can serve as a quick reference for this information, that you can customize to suit your needs. Tear out this page and post in your tractor, barn, or greenhouse for ready access during planting season.

Genus / Crop	Avg. Seeds / Oz	Avg. Seeds / Lb	Seeds / Acre (Dir. Seed)	Seeds / Acre (Transp.)	Germination Temp (°F)	In-Row Spacing	Between-Row Spacing	Planting Depth	Days to Germination
Bean, Bush & Pole	100	1,600	50-90 lbs.	-	70°F	2-3"	18-36"	1-2"	6-10
Bean, Baby Limas	100	1,600	40-70 lbs.	-	70°F	3-4"	18-24"	1-1.5"	6-10
Bean, Large Limas	25	400	75-100 lbs.	-	70°F	3-4"	24-36"	1-2"	6-10
Bean, Fava	20	300	70-120 lbs.	-	50°F	4-5"	18-24"	1-2"	6-10
Beet	1,750	17M-44M	10-12 lbs.	-	60°F	1-4"	18-24"	0.5-0.75"	7-14

GROWER TRIALED & TRUSTED

Our Grower Trial Program brings commercial growers into the process, giving us valuable feedback on new products in real growing conditions and across different regions. From established performers to promising new introductions, we're working alongside commercial growers in real-world growing conditions, Harris Seeds evaluates established performers and promising new introductions to see how they measure up in the field.

Wondering which products are right for your operation?
