

ARNON EDELSTEIN

FEMICIDE

A
COMPREHENSIVE ANALYSIS
OF THE
GLOBAL EPIDEMIC
OF
WOMEN'S MURDERS

In a groundbreaking challenge to conventional understanding, criminology expert Prof. Arnon Edelstein reveals the shocking truth:

40% of men who murder their partners never exhibited prior violence. This discovery fundamentally transforms our approach to preventing intimate partner homicide and protecting vulnerable women worldwide.

ABOUT THE BOOK

Intimate partner homicide. Wife killing. Domestic murder. No matter what we call it, Femicide is a global phenomenon that transcends nations and languages. Yet unlike other forms of violence, femicide occurs not among strangers – but between two intimately familiar partners, who often spent years sharing their lives, building a home, and raising a family. In *Femicide*, renowned criminologist and sociology expert Arnon Edelstein breaks down the social and psychological aspects of intimate partner homicide. The culmination of years of research, Edelstein's thorough analyses offer new theories on the triggers, motives, and psychological profiles of men convicted of femicide.

While challenging traditional methods and pathologies, Edelstein provides groundbreaking insights into the cultural and sociological theories behind a global epidemic of violence, particularly:

- The critical link between a woman's desire to leave a relationship and a man's dependent personality
- How lack of social support systems specifically for men creates deadly anxiety in dependent partners
- Why the "violent macho man" stereotype fails to identify a significant percentage of potential murderers
- Practical intervention points and warning signs that current systems overlook
