

MUG
LIGHTING

CATALOGUE 02

MUG™ embodies the vision of its founders, Corrado Dotti and Alessandro Targetti, as a contemporary luxury lighting with a product collection distinguished by a timeless and unique design.

Headquartered in Milan, MUG leverages the finest Italian craftsmanship to ensure optimal quality and appearance of its products. The focus on balanced proportions and the luminous effect of its lamps are the core of MUG's design process while the refinement of the materials define the quality standard of the pieces.

The brand's debut collection, showcased at the 2025 Euroluce exhibition in Milan, features two families: Jasmine and Lounge. Both collections are distinguished by their iconic mouth-blown Murano glass lampshades and unique compositions, encapsulating MUG's sophisticated aesthetic and design philosophy.

COLLECTIONS

MOUTH-BLOWN GLASS

2025

COLLECTIONS

The 2025 collections are crafted in hand-blown Murano glass, celebrating Venetian glassmaking tradition and exploring a decorative language with multiple compositions, from single pendants to large chandeliers, enhancing spaces with refined elegance and minimal approach. These collections express a balance between heritage and contemporary design, where craftsmanship and simplicity shape the character of light.

Jasmine

As a celebration of Venetian artistry, the Jasmine Collection embodies the craftsmanship and timeless beauty of Murano glass. This collection, composed of six distinct lighting pieces—from a single pendant to grand chandeliers of up to eighteen shades—transforms light into an expression of elegance and refinement. Each spherical lampshade is meticulously mouth-blown by master glassmakers, upholding centuries-old traditions. The distinctive Sfumato technique, an ancient Venetian method, allows two colors to blend seamlessly within the glass, creating a mesmerizing interplay of light and depth. The result is a collection where each shade possesses a unique character. The lamps are supported by a pewter-coated steel framework, a refined yet bold contrast to the organic fluidity of the glass which enhances Jasmine's sculptural presence.

Lounge

Minimalist in form yet rich in craftsmanship, the Lounge Collection embodies a refined aesthetic through pure geometric shapes and premium materials. This family of lighting fixtures—a single pendant, a wall sconce, a three-light chandelier, and a four-light chandelier—offers a contemporary take on Murano glass artistry. Each piece features a mouth-blown glass diffuser, shaped into a distinctive flattened disc, creating a soft, ambient glow. The collection offers a variety of sophisticated material finishes and colors, with each piece emphasizing a bold, architectural presence.

NOVELTIES

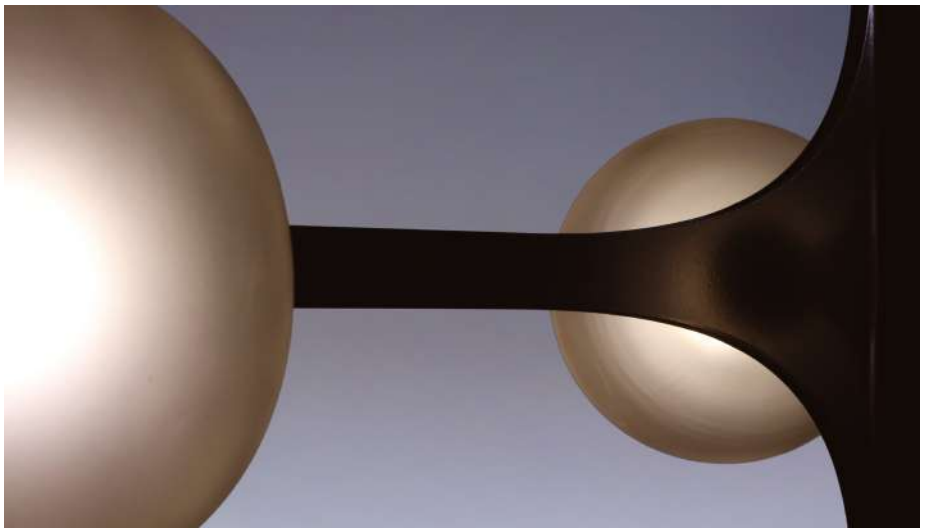

2026 COLLECTIONS

The new collections share a focus on clean geometries and a thoughtful interplay of materials, where each element is reduced to its most deliberate expression. Surfaces and structures are designed to interact with light in different ways—through contrast, reflection, or translucency—creating depth. Details such as layered diffusers and subtle openings become defining features rather than decorative additions. The overall effect is a coherent group of lighting pieces that combine clarity of form with a quiet, balanced presence in space.

Charlotte

A suspended lamp with an essential structure diffuses a soft, even, glare-free light. The cable connects directly into one of the diffusers, creating a clean and distinctive detail. A minimal design with an elegant presence, combining geometric rigor with a soft, inviting atmosphere. Although the many sought-after details, what strikes as the main focus of the lamp is the connection of the cable directly into the upper diffuser, which creates the illusion of a floating luminous piece. Charlotte's sophistication lies in its visual simplicity achieved by the clean pairing of materials: neutral frosted glass and enticing metal finishes. The structure is created by aligning three folded metal sheets, which are crowned by almost spherical globes illuminated at their center, allowing the light to appear as if hovering within, unattached and weightless inside the glass.

Celine

Sharp lines and rounded shapes enriched by precious reflections define Celine. The lightweight structure is arranged in various layouts, from smaller chandeliers to imposing pieces ensuring a versatile and captivating collection. Its minimality, accentuated by the matte black finish is contrasted by the refined design of the double-glass diffusers: a luminous hourglass encapsulated by a transparent sphere and mirrored chrome domes to ensure smooth and continuous light distribution. Celine was conceived as a contemporary play of contrasts: the juxtaposition of opposing elements in material finishes such as glossy and opaque, linear and geometrical forms and visual hierarchy of the components engages the eye and guides it towards the many details.

Slim

Slim is a sculptural pendant defined by a refined silhouette, clean proportions, and a contemporary character. The collection is rooted in balance, relying on essential forms to express a timeless and quiet elegance. Each piece is composed of two specular halves—gently flared discs that taper into a continuous, fluid curve. Between them, a precise line of light emerges, subtly separating the form while casting a soft, diffused glow downward. The Slim collection is available in a range of refined metal finishes, from neutral tones to more luminous hues.
